Ford's $2.5 billion is just the start of Jaguar investment

By Daniel Ward
STAFF CORRESPONDENT

LONDON — When the Ford bid came last week, the only surprise was that General Motors abandoned its much heralded defense of Jaguar's independence without buying a share in the British company.

With Lindsey Halstead, chairman of Ford of Europe sitting alongside him, Jaguar Chairman Sir John Egan revealed Thursday that he had warned GM two weeks before that Ford would make a full bid. General Motors was also informed that Jaguar executives were prepared to consider written proposals from Ford, though it would stop short of face-to-face negotiations while the nine-month talks continued with GM.

Ford's bid caught GM a week away from announcing its plans, first to buy a 15 percent stake in Jaguar and then increase this to 29.9 percent when the golden share was waived. Press reports had suggested GM would offer up to £8 ($12.55) a share to acquire 15 percent.

In a terse statement after the Ford bid had been accepted by Jaguar, GM said, "After an intensive review of Jaguar's products and plants and in view of the losses currently being sustained by them, together with Jaguar's significant future cash and other requirements, GM concluded that the maximum value that could be assigned to all of the Jaguar shares was very significantly below the £8.50 ($13.40) being offered and the premium of approximately £1.3 billion ($2 billion) over book value at year-end could not be justified."

The price paid by Ford is more than five times Jaguar's net asset value.

Ford believed it was worth paying a high price to fulfill the company's key strategic objective to enter the luxury car market. While Halstead conceded that Jaguar lost money after tax in the first half of 1989, he emphasized it made profits totaling over £500 million ($800 million) in the five previous years and achieved a highly respectable 7.5 percent return on sales.

He added, "It would probably have cost us more to replicate what we are buying today."

He added, "The luxury segment is going to grow faster than the market as a whole, so we want to see Jaguar take the lead in this growth, and over the next five years we would expect a very significant improvement in Jaguar profits."

Stephen Reitman, motor industry analyst at stock brokers Phillips & Drew, said, "It is very clear that Ford sees Jaguar as a long-term investment for the year 2000 and beyond, and at least the rest of the business will be providing the cash flow for Jaguar."

The £1.6 billion ($2.5 billion) purchase price is only the start of Ford's investment. Money will be needed for new models and better plants.

The future model program as far as it is known includes a facelifted XJS and introduction of a 4-liter XJS in 1990; launch of the V12 XJ6 with minor styling changes in 1991; launch of the F-type two-seater, powered by 340 horsepower turbo 4-liter,

Chrysler dismantles marketing divisions

By Mary Connelly
AUTOMOTIVE NEWS STAFF REPORTER

Chrysler Motors will consolidate its three existing divisional marketing groups into one operation.

The change, to be announced this week, is part of Chrysler's continuing efforts to streamline operations.

Separately, Chrysler Corp. plans to disband the company's four-year-old holding company structure by year's end. Chrysler Corp. is the holding company for Chrysler Motors and other subsidiaries.

The holding company failed to offer significant advantages because the company did not diversify as much as it had intended.

Under the marketing realignment, Chrysler-Plymouth, Dodge and Jeep-Eagle will continue as marketing divisions. But the change is expected to affect titles and responsibilities of mid- and upper-level marketing personnel who operate the divisions.

Currently, Joseph Campana is vice president of Chrysler-Plymouth, John Damoose is vice president of Dodge car and truck, and Joseph Cappy is vice president of Jeep-Eagle. Those operations will fall under one line of authority.

As it tried to differentiate its products in the market, Chrysler adopted a brand management system under which each of its car and truck brands had a marketing manager and a product manager. The realignment is expected to abolish that approach.

Instead, it is expected that vehicle platform marketing directors may be created as well as a vice president of marketing, according to one company source. Such a structure would mirror an engineering department reorganization earlier this year centered on platform groups.

Chrysler is streamlining its structure and consolidating operations as it seeks to meet its primary aim of becoming the low-cost domestic producer. The company is battling with lower sales and reduced market share in 1989.

The company confirmed that Chrysler also is moving to disband the corporate holding

UAW to fight plant closings

Union wants tighter rein on makers in '90 contracts

By Mary Connelly and Michelle Krebs
AUTOMOTIVE NEWS STAFF REPORTERS

In 1990 national negotiations with the Big 3, the UAW will try to narrow the opening in current contract language that has allowed plants to be idled because of weak sales of their products.

UAW President Owen Bieber said in an interview that the union is studying the issue of volume-related layoffs as it prepares its strategy on job security provisions.

Asked how the UAW might prevent plant closings such as those announced by General Motors during the current contract, Bieber said, "We're working now on some ideas. Job security will continue to be an important item when we sit down at the collective bargaining table. We'll try to find new ways to guarantee that job security."

The current UAW contracts with the Big 3 contain job security provisions that prohibit plant closings except in cases of weak product sales. GM has idled plants in Pontiac, Mich.; Leeds, Mo.; and Framingham, Mass., since the current contract was negotiated. A fourth plant is scheduled to close next spring.

Omni, Horizon to be dropped

By Michelle Krebs
AUTOMOTIVE NEWS STAFF REPORTER

DETROIT — Chrysler Corp. said it will close its old Detroit plant as it discontinues production of its slow-selling Dodge Omni and Plymouth Horizon subcompacts. Chrysler is also closing a parts plant in Wisconsin and placing its St. Louis car assembly plant on one shift.

The moves come on the heels of Chrysler Chairman Lee Iacocca's recent comments in an Automotive News interview that the automaker would be forced to close plants in the face of tough times over the next 15 months.

GM consolidation may lead to plant closings

By Michelle Krebs
AUTOMOTIVE NEWS STAFF REPORTER

DETROIT — General Motors is considering consolidating its engine, transmission and foundry operations into one super group like its car groups, potentially affecting 72,000 employees.

GM spokesmen said the automaker believes one group focused on the design, development and manufacturing of powertrains could respond quicker to changing market demands. It also would enable GM to move faster when stricter fuel economy and emissions standards are enacted by the federal government. Powertrain operations now are spread throughout the corporation.

GM is expected to close some powertrain-related plants in the 1990s, not as part of the consolidation, but as part of GM's corporate plan to boost factory utilization. GM plans to increase its factory use rate to 100 percent by 1992. The rate has been 75 to 80 percent the past couple years.

Company and union sources say that as many as a half dozen components plants could close. Likely candidates are those with no future products scheduled.

GM spokesmen said the consolidation study has nothing to do with possible plant closings. Market conditions dictate plant closings, they added.

Last week, GM told workers at its engine, transmission and foundry plants about the study. By year-end, a study committee must develop proposals for an organizational

Chrysler minivans in Europe?

Chrysler is close to a decision to build a four-wheel-drive version of its minivan in Europe. Details on Page 2

Ford's Crown Victoria is revamped for the 1992 model year — notice the Jaguar-like roofline. SEO PHOTOS

Looking ahead at Crown Vic, Mark, minivan

By Laura Clark
AUTOMOTIVE NEWS STAFF REPORTER

Two major products in Ford Motor Co.'s future stable show the automaker will retain the aerodynamic shape into the 1990s.

Prototypes of the replacements for the Ford Crown Victoria and Lincoln Mark VII were spied in the Detroit area last week. Also uncovered was a test mule for the Nissan/Mercury minivan.

The replacement for the Crown Victoria/Mercury Grand Marquis will debut midway through the 1991 model year with a more rounded exterior than its predecessor. The front-end design picks up styling cues from the Taurus, Thunderbird and a Lincoln.

The Crown Victoria features wraparound body side moldings and rocker panels that are similar to those on the Lincoln Town Car. The car will be powered by Ford's new modular 4.6-liter V-8 engine.

The front-end styling theme for the Mark VII replacement features a sloping, aerodynamic version of the car's distinctive grille.

In this photo, a current-generation Thunderbird is fitted with the Lincoln's fenders and grille to test for cooling problems. The new Lincoln bows in mid-1992 and may be called Mark VIII.

The Nissan/Mercury front-wheel-drive minivan appears to have dimensions similar to those of the Plymouth Voyager. The test vehicle pictured here is disguised, composed of parts from the Aerostar and Escort parts bins. Though the actual exterior styling is expected to be different, the picture gives an idea of the size of the Nissan/Mercury minivan.

A test mule, above, gives an idea of the size of Nissan/Ford minivan. Front sheet metal for the Mark VII, right, is bolted to a Thunderbird.

1992 U.S.-built Camry due for Japan export

By Lindsay Chappell
AUTOMOTIVE NEWS STAFF REPORTER

Toyota Motor Co. will design a new, larger version of its best-selling Camry sedan for production in Kentucky, with an eye toward exporting 40,000 annually to Japan in 1992.

Toyota buys American, Page 53

The plan is part of a newly unveiled three-year program to increase U.S.-to-Japan exports and ease trade friction. It will also mark another step in the Japanese transplants' foray into production of ever-larger vehicles.

The introduction of the larger Camry will probably coincide with a curtailment of Camry production in Japan, a spokesman for Toyota Motor Sales U.S.A. said. Toyota manufactures the compact in Japan and in Georgetown, Ky., but most of the cars are sold in the United States.

Toyota also said the new model will be exported as a right-hand-drive vehicle. U.S. manufacturers historically export only left-hand-drive autos, regardless of the preference of the importing market.

The company's plan would see $2.1 billion a year in U.S.-made automotive goods and services exported by the end of 1992, a 250 percent increase over this year.

Included in the program are:

- 40,000 units of a "yet-unnamed model" — the larger Camry — to be produced at the $800 million Georgetown plant, which opened last year. Georgetown's 200,000-unit capacity will be increased to accommodate the new model. Export will begin immediately after its debut in 1992.

The company hasn't determined the total new capacity, the resulting amount of new plant investment and the increase in the work

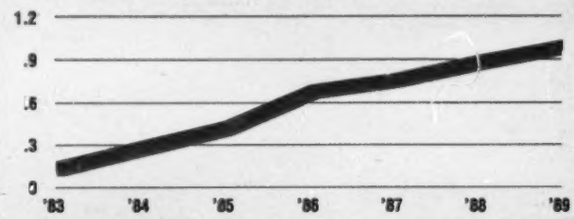
Transplant production in U.S.

At the start of the decade, there was one U.S. transplant automaker: Volkswagen. Since then, VW has closed its plant and seven Japanese firms have set up shop. Their combined output including cars built for Big 3 partners has topped the 1 million mark for the first time in any single year. Figures in millions.



Includes production figures for Honda, Mazda, Diamond-Star, Nissan, NUMMI, Toyota and Volkswagen. Subaru-Isuzu Automotive numbers unavailable. Production started in September.

Vitulli leaves Chrysler for Mazda job

By Dutch Mandel
AUTOMOTIVE NEWS STAFF REPORTER

The appointment of Clark J. Vitulli as senior vice president and general manager of Mazda Motors of America gives the Japanese company strong insight into the domestic luxury car market and pumps new blood into a firm that has undergone extensive organizational changes in the past year.

Vitulli, a 20-year sales and marketing executive of Chrysler brand automobiles, was named last week as the company's top non-Japanese executive.

Most recently, he has been serving as general marketing manager of Chrysler Division with responsibility for developing and executing marketing, merchandising and advertising programs for Chrysler brand vehicles. Before assuming that post, he was Chrysler's regional sales manager in California.

Vitulli, 43, said he hadn't been planning to leave Chrysler and that he mulled over the Mazda proposition for two months before accepting. He will be in charge of all of Mazda's U.S. sales, service, parts and marketing operations and will report to Yoshi Taura, president of Mazda Motors of America. He will also be a member of the company's executive management committee.

Vitulli

A Chrysler spokesman said of Vitulli: "He is a fine gentleman, and we wish him well."

His appointment puts in place the final block of Mazda's reorganization plan — undertaken more than a year ago — which sought to unify its sales operation and bring it under the aegis of one executive.

Until Vitulli's appointment, that responsibility fell to George McCabe, who remains group vice president of operations, responsible for sales operations, dealer development, advertising and Mazda's five regional offices. McCabe will report to Vitulli.

Vitulli said that although he approaches his first "new" job in 20 years with some trepidation, he feels strongly about his ability.

"It will take drawing on all the experience I've had in the past 20 years to make this venture successful," he said. "But I see this as a totally positive move."

Vitulli said he welcomes the opportunity to go to a company that has strong product and a well-defined long-term strategy.

"It has been said that Chrysler is a marketing company," he said. "I will say today that is not the only truth. They have a wonderful lineup of cars — now, and in the future.

"The product Mazda has now. . . . boy, is that a great opportunity. All of the vehicles are solid. If I can take my marketing expertise with me and apply that to Mazda, I think it will be a real good marriage."

According to Vitulli, one of the first things Mazda employees and dealers will learn is that he will key on making Mazda unified.

"I am a real 'people' person and a team player," Vitulli said. "If there is something I can do with Mazda initially — to gain market share and profitability — I will."

Transplants make a million

By Lindsay Chappell
AUTOMOTIVE NEWS STAFF REPORTER

NASHVILLE, Tenn. — Japanese transplant automakers and their joint U.S. production ventures have passed a milestone that may seem insignificant in a few years: Their combined U.S. output passed the 1 million vehicle mark last month for the first time in any single year.

Transplant factories reported production of 1,029,527 cars and trucks through Oct. 28. That compares with 751,668 for the same period in 1988.

The previous annual record was set last year, when transplants built 916,585 vehicles. That figure included the last cars produced at Volkswagen of America's now-closed plant in Pennsylvania.

According to the transplants' various plans, this year's output should pass 1.2-million units. Production from two new plants is coming on stream. Numbers from Subaru-Isuzu Automotive in Lafayette, Ind., which opened in September, will begin showing up this month. And Honda of America Manufacturing's new plant in East Liberty, Ohio, starts production in late November.

In addition, two other plants are completing their first full year of operation. The Toyota Motor Manufacturing USA plant in Georgetown, Ky., and Diamond-Star Motors, a Mitsubishi-Chrysler venture, are both running at full volume now for the first time.

This year's million-unit volume includes General Motors vehicles built at New United Motor Manufacturing, a joint venture with Toyota in Fremont, Calif.; Chrysler vehicles built at Diamond-Star in Normal, Ill.; and Ford vehicles built by Mazda Motor Manufacturing (USA) in Flat Rock, Mich.

For 1991, the Japanese transplants have targeted output of 1.7 million vehicles.

SERVICE MANAGEMENT

Crash parts studied; no decision

By Francis J. Gawronski
AUTOMOTIVE NEWS STAFF REPORTER

After studying non-original-equipment-manufactured crash parts, a Canadian consumer protection group has taken an impartial position in the controversy between the automakers and the insurance industry over their use to repair vehicles.

In its Report on the Aftermarket Body Shop Industry, the Automobile Protection Association of Montreal and Toronto said, "At this time, the association cannot issue a blanket approval or condemnation of non-OEM body parts. In many cases, the choice the consumer has to make is not between non-OEM and new-OEM parts, but rather non-OEM and used parts."

The association noted pros and cons of using either OEM or non-OEM crash parts. The survey and report were funded by the Canadian Department of Consumer and Corporate Affairs.

"This is the most extensive report published in Canada and, to our knowledge, in all of North America on the aftermarket body parts industry," said George Iny, president of the consumer association.

Iny said many auto insurance companies in Canada, as in the United States, specify that damaged vehicles be repaired with sheet metal parts made by independent companies, which are less expensive than those made by the OEM.

On the other hand, he said, automakers allege that such non-OEM parts are inferior and that consumers whose vehicles are repaired with those parts are being shortchanged by the insurance industry.

The report also noted that insurance companies, directly or indirectly, have assisted non-OEMs "by carrying on public relations and lobbying activities, testing, setting up the Certified Automobile Parts Association program to promote and identify high-quality non-OEM body parts, providing legal assistance and even lending money to individual non-OEM collision parts manufacturers."

The non-OEM share of the body parts market has increased from insignificance in 1980 to 10 percent of the market. Last year, an estimated $90 million of the $900 million spent in Canada was spent on non-OEM parts.

"Caught in the middle is the consumer," Iny said.

In its report, the consumer association said 15 of the 20 body shops in the survey claimed that non-OEM parts were always inferior to OEM parts.

At the time the report was compiled, the consumer association said, most non-OEM crash parts were not even conditionally certified by the non-OEM industry's own certification association, and very few had passed that group's corrosion-resistance test.

The difference between repairs made with OEM and non-OEM parts appears to be mostly one of fit and finish. Safety is not a factor, the report said. The consumer group said that OEM corrosion protection is superior, but it found no evidence that non-OEM parts were rusting out in use, and it said that corrosion protection is improving.

The report also noted that savings claimed by the insurance industry from using non-OEM parts are often exaggerated and do not take into account automaker pricing strategies or differences in parts quality.

Therefore, the report said, a large part of the insurance industry's savings "may well be at the expense of either the body-shop operator, who must spend additional time (unpaid) to install and finish a part, or the consumer, who may obtain a lower-quality repair."

Also, there is no solid evidence that lower collision parts costs are being reflected in the insurance premiums the consumer pays.

The report noted that the automakers' pricing appears to be determined more by what the market will bear than by actual production cost.

In Canada, the report noted, a 1988 Ford Tempo fender (when no non-OEM replacement was available) was priced 80 percent higher than the similar, but not identical, 1987 OEM Tempo fender when a non-OEM replacement was available.

More than half of the respondents in the survey claimed that auto dealers sometimes reduce the price of the OEM body parts in the face of non-OEM parts competition.

The consumer association said it believes that reputable independent sources of replacement parts benefit consumers and that non-OEM parts manufacturers should be encouraged. Many non-OEM parts are still not up to OEM standards, the consumer group said. It endorsed industry efforts to raise the quality of non-OEM parts through certification.

The report said several insurance companies already provide disclosure statements to consumers when non-OEM parts are used. It encouraged the industry to make such disclosures universal.

The report advised owners of late-model vehicles in good condition to insist on OEM or certified non-OEM parts.

Ford Job Fair draws recruits

Garry Frederick, Detroit Ford district service manager, left, works the second Dealership Service Technician Job Fair. Sponsored by Ford parts and service division, the fair was held in Dearborn, Mich., and attracted more than 750 applicants. The 30 participating Detroit-area Ford and Lincoln-Mercury dealers hired 77 recruits and scheduled second interviews for 102 more. The first job fair was held in Atlanta in June, with additional fairs scheduled for other cities.

Service volume declines again; September 4.7% below last year

By Francis J. Gawronski
AUTOMOTIVE NEWS STAFF REPORTER

Service and parts business in the shops of new-car dealerships declined for the second straight month in September, but the year-to-date results for the first nine months of 1989 remained above those of a year earlier.

In September, shop volume dipped 4.7 percent below the results in September 1988 and was 3.4 percent less than the business reported in August 1989, according to the Automotive News Service Index. Shop business in August was down 1.3 percent from the volume recorded in the same month in 1988.

Service and parts business for the first nine months of 1989 was 1.6 percent ahead of the volume for the same period a year ago.

The Service Index is compiled from figures on parts and service supplied by a cross-section of the nation's dealerships.

A dealer in New England attributed the downturn in service and parts business to fewer recalls of cars by the automakers.

A retailer in the Midwest pointed to fewer business days — 20 — in September and a "general economic downturn in this part of the country" for the slump.

Although gross profit on all labor, parts and accessories sales in September declined 5.5 percent below the total reported in the same month a year ago, the year-to-date profit was 2.9 percent above the year-earlier figure.

Sales of all parts and accessories were up 4.5 percent in September and 0.5 percent for the first nine months, while repair orders written dropped 4.8 percent for the month and 2.2 percent for the year-to-date period.

SERVICE INDEX 95.3★

	Sept. '89 vs. Sept. '88	Jan.-Sept. '89 vs. Jan.-Sept. '88
Gross Profit on All Labor and P&A Sales	−5.5%	+2.9%
Repair Orders Written	−4.8%	−2.2%
Total Labor Sales (Customer & Warranty)	−4.0%	+2.4%
Shop Parts Sales (Customer & Warranty)	−6.6%	+1.5%
Sales of All P&A	+4.5%	+0.5%

★ Survey by Automotive News shows that dealers' service and parts business in September 1989 was 95.3 percent of business in September 1988. Service business in the first 9 months of 1989 was 101.6 percent of business in the corresponding period in 1988.

Total labor sales (customer-paid and warranty) dipped 4.0 percent in September but were up 2.4 percent for the first nine months, while shop parts sales (customer-paid and warranty) dropped 6.6 percent in September and 1.5 percent in the January-September period.

Purolator, Facet filter activities merged

ELMIRA, N.Y. — Facet Enterprises has consolidated two of its subsidiaries — Purolator Products and Facet Automotive Filter Co. — to form what it claims is the world's largest automotive filter manufacturing and marketing company.

James R. Malone, Facet president and chief executive, said the new company, Purolator Products, will make and market filters for retail, private label and original-equipment segments of the auto industry.

Russell D. McBroom, who served as president of Facet Automotive since 1985, has been named president of Purolator Products, which will remain headquartered in Tulsa, Okla. Facet Automotive and Purolator had operated side-by-side since Facet Enterprises, a subsidiary of Pennzoil Co., acquired Purolator in 1987.

Malone said the new Purolator Products has an estimated market share of more than 30 percent.

SERVICE BRIEFS

Dexron II monitoring

YPSILANTI, Mich. — General Motors' Hydra-matic Division has expanded its quality monitoring program for Dexron II automatic transmission fluids.

According to Thomas R. Zimmer, Hydra-matic general manager, the move followed the January transfer of administrative responsibilities for the Dexron II program from General Motors Research Laboratories to Hydra-matic.

Zimmer said Hydra-matic will expand field sampling activities to include all Dexron II licensed fluids. The program should ensure continued product compliance to Dexron specifications and eliminate unauthorized and improper use of the trademark, he said.

Sampling will begin in North America this year, with plans to become global in 1990, Zimmer said.

Eaton training clinics

KALAMAZOO, Mich. — Mobile training clinics to instruct truck service personnel have been developed by Eaton Corp.'s truck component marketing division.

The 12 Eaton Roadranger Mobile Training Clinics will supplement regional service training by offering mini-clinics at fleet or dealership locations, according to Bruce Daniels, Eaton's Great Lakes region service manager.

"When we hold training sessions at a regional office it's not always feasible for some dealerships or fleets to release their service personnel for two or three days," Daniels said. "Our new mobile training clinics are a fast means of providing consistent and up-to-date on-site instruction."

Classes include instruction on how to read service manuals, parts books and illustrated parts lists. Troubleshooting videos are shown on subjects such as rear seal maintenance and gear failure analysis.

Fuel injector cleaning

DALLAS — A multifaceted machine that makes it possible to clean and test electronic fuel injectors off the vehicle has been introduced by the automotive electronic division of New Age International.

Called EFI Enterprise 2001, the unit was developed in Australia and is said to handle electronic, mechanical and throttle-body injectors up to 12 at a time.

The 2001 has a closed reservoir, pump and filtering system. The solvent is non-toxic and meets EPA and Occupational Safety and Health Administration standards, according to Frank Horwood, general manager of export sales for New Age.

In addition to back flushing to clean the micron filter of trapped debris, the 2001 is said to perform pulse and tip cleaning and pattern, leak-down and flow testing. It also allows the technician to control rpm, pulse width and pressure and provides seven computer-simulated engine running modes to choose from for his work.

Merwin replaces Richey

BEDFORD, Texas — G.W. Merwin III has been named president and chief executive officer of the Automotive Service Association, succeeding Allen C. Richey, who retired.

Merwin was executive vice president of the association. He has more than 35 years in the automotive industry. He was president and chief executive officer of the Automotive Service Councils from 1973 until 1986, when that group consolidated with the Independent Automotive Service Association to form the Automotive Service Association.

Arvin buys Spanish firm

COLUMBUS, Ind. — Arvin Industries has reached an agreement to purchase 75 percent of A.P. Amortiguadores of Pamplona, Spain, a supplier of shock absorbers to European car firms.

Arvin will purchase the shares from T.I. Group of Great Britain for about $41 million. The Spanish firm anticipates sales of $100 million in 1989.

The other 25 percent of A.P. Amortiguadores is owned by Kayaba Industry Co. of Tokyo, a manufacturer of struts and shocks. Kayaba will continue to provide shock absorber technology to the Spanish firm under a previous technical assistance agreement.

COVER STORY

Computer caution

Many vendors are diversifying in case auto sales slide

Companies that sell computer hardware and software to automobile dealers are generally optimistic about the market in the near future. In fact, nearly all of the vendors that revealed sales figures in an *Automotive News* survey are predicting growth in 1989 and 1990 *(see table at right)*.

Topping the list is ADP Dealer Services, reporting 1988 sales of $1.549 billion (including non-automotive business).

ADP is bullish about 1989 and 1990, predicting sales of $1.678 billion and $1.780 billion, respectively.

The company boasts of sales growth every year since it was formed in 1972. "We have a strong and stable workforce and a strong commitment to research and development," a spokesperson says. "We're developing long term."

Second from the top of the list, The Reynolds and Reynolds Co. reports sales of more than $600 million in 1988. The firm expects sales to fall to $585 million in 1989, making it the only survey respondent to forecast a drop in sales. Half of the company's business is from auto dealers.

Other smaller computer vendors express cautious optimism about their automotive business in the coming year.

With some automotive analysts predicting a tightening new-car market, it's a truism in the industry that computer companies must help car dealers become more efficient if they want to experience sales growth in coming years. As they witness the closing of several new-car dealerships, computer firms are improving their products and seeking new growth markets.

Says Kevin Distelhorst, vice president of marketing at MCS One Touch, "Some dealers are having a tough time. We serve 1,000 GM dealers, and we are losing five to seven a month." He adds, however, that business overall is good.

MCS One Touch, which reports 1988 sales of $4.1 million, estimates sales of $4.9 million this year and $6 million in 1990.

Combined Systems Technology Inc. foresees its auto dealer business growing from 30 percent of sales in 1988 to 40 percent of sales in 1990. It reports sales of $5 million in 1988 and forecasts $7 million this year and $9 million in 1990.

Micro Masters has just begun selling to auto dealers. It plans 10 percent of sales to auto dealers in 1989 and an increase to 70 percent of sales in 1990. The firm expects sales of $189,000 this year and $425,000 next year.

Impact Systems Inc. says it has maintained its automotive business through its service efforts. Richard Simoni, vice president of marketing, says computer sales are not booming but they are not bad, either. He describes the auto market as "sophisticated."

Impact Systems is seeking new business in order to stay ahead. Simoni explains: "We are trying to enter used-car dealers and dealership used-car departments. Other growth areas we have looked at are service departments, customer follow-up and customer satisfaction indexes as possibilities."

IC Engineering is forecasting increased sales, but not to auto dealers. The firm reports 95 percent of sales to dealers in 1988, and expects 90 percent this year and 80 percent next year.

According to an IC Engineering representative, "The market has gone down for autos. Our existing customers are ordering less or they postpone ordering software and services until absolutely necessary."

IC expects its non-automotive business to grow. It predicts sales increases to $350,000 in 1989 and $400,000 in 1990. The company reports actual sales of $300,000 for 1988. ■

Computer vendors are generally optimistic about sales

ADP DEALER SERVICES

ADP Dealer Services, 1950 Hassell Rd., Hoffman Estates, IL 60195. Phone: (312) 397-1700.

Personnel: Glenn W. Marschel, president; S. Michael Martone, senior vice president-sales; Bert Winemiller, senior vice president-product development; William S. Tulko, senior vice president-finance and administration; Dante Terzo, senior vice president-general manager.

Field Locations: 10151 S.E. Sunnyside Rd., Clackamas, OR 97015, (503) 654-6300; 6190 Powers Ferry Rd., Suite 250, Atlanta, GA 30339, (404) 955-6080; 300 Galleria Officentre, Suite 210, Southfield, MI 48034, (313) 353-9710; 400 Broadacres Dr., Bloomfield, NJ 07003, (201) 365-7500; 2735 Stemmons Freeway, Dallas, TX 75207, (214) 630-3041; 8550 Marshall Dr., Suite 201, Lenexa, KS 66214, (913) 492-4500; 18 Centerpointe Dr., La Palma, CA 90623, (714) 228-0222; 2010 Crow Canyon Place, San Ramon, CA 94583, (415) 866-1100; 8100 Cedar Ave. S., Bloomington, MN 55420, (612) 854-2080; 7390 Empire Dr., Florence, KY 41042, (606) 371-5005; 4 Kern Rd., Don Mills, Ontario, Canada M3B 1T1, (416) 443-8620; 4946 Canada Way, Suite 125, Burnaby, British Columbia, Canada V5G 3L4, (604) 736-5931.

Products: Complete dealership on-site computing systems featuring integrated single entry ADP Elite software for business office: accounting, accounts payable, payroll. Sales Dept.: showroom control, vehicle management, F&I with credit check, lease and rental, sales management. Service Dept.: service merchandising, dispatching, repair order invoicing, electronic repair order. Parts Dept.: automated parts catalog, parts inventory, parts invoicing, national parts locator. Manufacturer automotive systems: manufacturer communications, specifications, polling development, financial modeling, telecommunications networking.

Dealer Areas Served: Business Office, Parts Dept., F&I, Manufacturer Interface/Communication, Customer Relations/Follow-up; Sales Dept., Used Car Dept., Service Dept., Service & Warranty Contracts, Vehicle Renting/Leasing.

Annual Total Dollar Sales: 1988 actual, $1.549 billion; 1989 estimate, $1.678 billion; 1990 forecast, $1.78 billion.

ADVANCED COMPUTER SYSTEMS

Advanced Computer Systems, 310 East 4500 South, Suite 550, Salt Lake City, UT 84107. Phone: (801) 268-9231.

Personnel: Carl Holland, president; Richard Holland, vice president-field operations; Lance Stoker, vice president-marketing.

Products: Fully integrated auto dealer management system covering all dealership departments. An on-line user guide coaches users through system interaction.

Dealer Areas Served: Business Office, Parts Dept., F&I, Manufacturer Interface/Communication, Customer Relations/Follow-up, Sales Dept., Used Car Dept., Service Dept., Service & Warranty Contracts, Vehicle Renting/Leasing.

Annual Total Dollar Sales: 1988 actual, $5 million; 1989 estimate, $7 million; 1990 forecast, $10 million (100 percent auto dealerships).

ARMOR SYSTEMS INC.

Armor Systems Inc., 324 N. Orlando Ave., Maitland, FL 32751. Phone: (407) 629-0753.

Personnel: Nick S. Barth, chairman; Richard O. Bourgie, president.

Products: Excalibur Premier business and accounting software applicable to single-user, multi-user or network systems. Offers individually sold interactive applications: accounts receivable, accounts payable, inventory control, point of sale, quick sale, payroll, job cost, billing, purchase orders, order entry, customer information/data base management and bank reconciliation. Report generator provides customized management reporting capabilities.

Dealer Areas Served: Business Office, Parts Dept., Service & Warranty Contracts.

AUTOMOTIVE COMPUTER TECHNOLOGY

Automotive Computer Technology, 7125 W. Jefferson Ave., Denver, CO 80235. Phone: (800) 367-8806.

Personnel: Ron Boyer, general manager; Tom Swierczek, sales manager.

Products: F&I systems that compare up to 10 payments for maximum gross profit. A customer tracking package includes multiway searches for customers plus a word processor and letter writer. Applicable to single or multi-user systems. On-site service provided. IBM authorized.

Dealer Areas Served: Business Office, F&I, Customer Relations/Follow-up, Sales Dept., Used Car Dept., Service & Warranty Contracts, Vehicle Renting/Leasing.

Annual Total Dollar Sales: 1988 actual, $1.5 million; 1989 estimate, $2.18 million; 1990 forecast, $3.0 million (100 percent auto dealerships).

FEATURE

Dealership of the future

Satellite technology links dealers with the factory

Seeking to grab a share of the lucrative luxury-car market, Nissan Motor Corp. in U.S.A. is rolling out its Infiniti division. To set the Infiniti Q45 and M30 apart from other luxury cars, as well as other Nissan models, Nissan is positioning them as providing the best luxury, performance and customer satisfaction.

This strategic differentiation extends to everything Nissan is doing with Infiniti — from a campaign that breaks the mold of typical car ads, to a network of dealerships devoted exclusively to selling the Infiniti brand.

It is these car dealerships that form the heart of Nissan's strategy to obtain market leadership through technological superiority and customer satisfaction. To ensure consistent service, all dealers will be trained and certified at Infiniti's National Training Center in Scottsdale, Ariz. And to ensure that these dealers have the fastest and most efficient access to service, customer and other information, Nissan is linking dealerships with an interactive satellite network supplied by Scientific-Atlanta, based in Atlanta, Ga.

Says Mike Hadfield, network data processing specialist for Nissan, "We have a prestige car. We've taken the cream of the dealerships, and we want to provide a prestigious network. We want the whole experience at the dealership to be not only the selling of a luxury car, but having a comparable network there to support it."

By installing a VSAT (Very Small Aperture Terminal) Satellite network, Nissan is following in the footsteps of Toyota Motor Sales U.S.A. and Chrysler Motors Corp., which began linking their dealerships via VSAT in 1988.

In fact, almost 60 percent of all VSAT networks are in the auto industry, as measured by percentage of end-user sites *(see figure 1)*. When the networks are completely installed, Chrysler will have about 5,500 sites on-line, followed by Toyota with 800 sites and Nissan with about 200. Other automakers, including American Honda Motor Co. and General Motors, are said to be looking closely at a VSAT network for their dealerships.

What exactly is a VSAT network? What specific advantages can it offer automakers? How does it compare to other data transmission techniques? And what role will VSAT play in dealerships in the future?

Essentially, VSAT is a method of distributing data, video and voice to widely dispersed sites via satellite link-ups. The technology allows tens, hundreds or even thousands of remote locations to access centralized computing facilities for either batch or interactive applications.

VSAT networks are considered a bypass technology, meaning they are an alternative to traditional methods of transferring voice and data over leased or public telephone lines. VSAT networks provide a strong economic advantage over traditional methods, especially as the number of sites in the network increases. The cost of VSAT transmission remains the same, no matter whether data is transferred between dealerships across town or across the nation.

The heart of a typical VSAT network is a master station, which can be owned by either the customer or the satellite vendor *(see figure 2)*. The master station is usually located at a central site, such as corporate headquarters or the data processing center. It uses a satellite dish linked to sophisticated switching and processing equipment. This equipment transfers data to and from a customer's host computer.

The master station transmits information via satellite to and from any number of remote stations. The remote stations are located at the dealership. Each typically consists of a small antenna and an indoor unit about the size of a video cassette recorder. The indoor unit has multiple ports and supports most standard communication protocols. Thus a remote station can provide end-to-end communications for all type of devices in a network.

VSAT networks provide numerous advantages over traditional terrestrial networks, including a high degree of reliability, flexible network configuration, sophisticated network management and a greater capacity for transferring information. And since there are no land-based telephone circuits that can be damaged, VSAT networks are also used for fail-safe disaster recovery; for example, at stations that were rocked by the recent earthquake near San Francisco.

VSAT networks are also better able to handle a fluctuating number of dealership locations. A VSAT site can be brought on-line in a day, compared to the months often needed to have terrestrial service installed.

Additionally, VSAT networks are generally less expensive to install and maintain than other long-distance networks. In fact, cost savings was the primary — and sometimes the only — criteria for the early adopters of VSAT technology. But as the automotive and other industries have become more sophisticated, corporate users are turning to VSAT networks to reduce network management headaches, improve the reliability of data communications and add the future capability to broadcast video.

One reason for the rapid expansion of VSAT networks has been its evolution through three generations of technology. The first generation, occurring around 1980, was characterized by the refinement of contention schemes, or the ability to handle simultaneous network demands for access.

In the mid-1980s, VSAT technology was applied to data communications as multiport, multiprotocol systems were developed. The third generation, exemplified by Scientific-Atlanta's SkylinX.25 VSAT offering, features open standardized architectures, improved access and flexible network management schemes.

But the auto industry is not adopting VSAT technology merely because of its technical advantages over other transmission techniques. The technology is being used as a weapon for competitive advantage.

According to Chrysler Corp. chairman Lee Iacocca, "The game in the 1990s will be won at the dealership level. Enhanced dealer service will get us strategically prepared for the game." VSAT networks are one way to dramatically enhance dealer capabilities to access needed information.

VSAT awards

Figure 1. Distribution by percentage of end user sites.

AUTOMOTIVE NEWS / KEN ENGLETON

By employing a central minicomputer, terminals and personal computers, dealers can use a VSAT network cost effectively in four locations in the dealership: sales/showroom; business office; service bay; and parts desk.

Figure 3 shows how the "auto dealership of the future" will employ VSATs. In the sales showroom, VSATs can be used for video training, video product presentations, electronic mail and on-line order entry. The business office can take advantage of credit card/check authorizations, third-party accounting timeshare, or access to a financing company.

The service bay can download diagnostic software and service manuals, review on-line warranties, or check service bulletins via electronic mail. The parts department can call up an electronic parts catalog, review schematics, correspond inexpensively with other dealers, or order parts.

Such capabilities cannot be effectively provided by traditional dial-up or leased line networks. Dial-up networks sometimes have problems with availability or reliability, and their response time is too slow for effective interactive communications. The bandwidth, or transmission space, is also too narrow to accommodate multiple applications.

Leased lines involve the continuing expense of complex network management. They are also difficult to expand or re-configure and require the integration of equipment from numerous vendors.

"With leased lines, you have to engineer the network and decide where this line is going to go and how many drops you should put on this leased line," Nissan's Hadfield says. "But you can put a VSAT dish literally anywhere in the U.S., and it's sort of a self-adjusting topology."

However, VSAT networks can work effectively with either a leased-line or dial-up network in a configuration called a hybrid network. This is because a network such as Scientific-Atlanta's SkylinX.25 is based on the industry-standard X.25 packet switching protocol.

What is the cost of a VSAT network for auto companies?

According to Hadfield, VSAT networks are about 20 percent less expensive than comparable terrestrial networks. In addition, much of the operating costs of the network can be recouped by monthly charges to the dealerships.

Upfront costs depend on whether a "shared" or "private" hub strategy is pursued. With a shared hub, a VSAT vendor essentially rents broadcast capabilities from a master station to several customers. A private hub, which costs up to $1.2 million to install, is owned and operated by the customer.

Both approaches have their advantages and disadvantages, but Nissan for now is going with a shared hub. Dealerships will exchange data with Nissan's main computer center via Scientific-Atlanta's shared hub in Los Angeles. Network management will be handled from Los Angeles, but Nissan will be able to monitor the network from its computer center via a high-speed modem link. Nissan may convert to a private hub in the future if that option becomes more economical.

The "fully loaded" costs to the dealer can range from $350-$600 per month per remote site, depending on the range of capabilities that are used. Often this charge can be less than the cost of dial-up or leased long-distance lines for traditional data communications.

With all the advantages of VSAT networks, it's no wonder that Chrysler, Nissan and other major automakers have made a major strategic commitment to VSAT. As a result, satellite dishes are likely to become as much a part of every auto dealership as banners announcing the latest models. ■

Jaguar in 1980s — a story of ups and downs

By Richard Johnson
AUTOMOTIVE NEWS STAFF REPORTER

FRANKFURT, West Germany — The rise and fall of Jaguar during the 1980s — which culminated in last week's high drama — has been tantalizing every step of the way.

Much of the focus is now on whether Ford Motor Co. paid too much for a company operating in the red and building cars in antiquated facilities. But that overlooks the great success Jaguar enjoyed in the not-too-distant past and improved prospects next year as a result of a better dollar exchange rate.

Jaguar earned net profits of £232 million ($364 million) during the three years 1985-87 on production of about 128,000 units.

After nearly vanishing in the 1970s, Jaguar staged a remarkable comeback. The theme of the mid-1980s was, "If only the rest of British industry could be more like Jaguar."

When John Egan became chairman in 1980, British taxpayers were pouring money into Jaguar. Losses totaled £46 million ($72 million) in 1980.

The first aim was to improve productivity. Jaguar used 8,286 employees to build fewer than 14,000 cars in 1981. Last year, Jaguar produced 51,939 cars with 12,611.

Egan and his management team also had to improve quality. Electrical problems had become synonymous with Jaguars in the 1970s and a running joke in America. The measures took hold, and Jaguar was deemed ready to be cut loose from its state-owned parent, BL — as Rover Group was then known. It quickly became the jewel in Prime Minister Margaret Thatcher's privatization program after shares were sold in 1984.

Jaguar fattened up largely on a booming U.S. luxury market that was made all the more lucrative by the sky-high dollar. But since then, Jaguar has been damaged by the dollar's plunge.

Problems began after the launch of the XJ6, which represents about 80 percent of volume and was the company's first new car in 11 years.

The XJ6 sold well, but suppliers had trouble meeting demand and training employees.

The drama has been magnified by the scheduled December 1990 expiration of a provision in Jaguar's articles of association that kept acquirers from buying more than a 15 percent stake.

By 1987, Jaguar profits were in decline as unfavorable exchange rates countered a growth in worldwide sales. Demand also softened in the European prestige segment.

Jaguar's U.S. sales rose from 3,029 in 1980 to 24,464 in 1986, but dipped to 20,727 in 1988. Though Jaguar's American volume declined less than that of some other makess, marketing costs increased because of discounts and incentives.

Profits collapsed this year. In the first half of 1989 Jaguar reported an operating loss and made a pretax profit of only £1.4 million ($2.2 million).

But there are some good signs on the horizon. For one, the company's U.S. dollar exchange rate is hedged at $1.55 to the pound next year, compared with a less favorable $1.70 in 1989. The stronger dollar rate improves earnings potential.

GM offers dealer rebates of $200-$500 on '89s, '90s

By Arlena Sawyers
AUTOMOTIVE NEWS STAFF REPORTER

Two of the Big 3 adjusted their incentive programs last week, while several importers implemented new programs, extended current programs or allowed their programs to expire.

Ford Motor Co. customers who purchase 1990 Broncos may choose either a $750 cash rebate or financing ranging from 6.9 percent for 24 months to 10.9 percent for 60 months. The 1989 Bronco, already available with a $750 rebate, now has the same special interest rates for the 1990 model. The program runs indefinitely.

Chevrolet, Pontiac, Oldsmobile, Buick and GMC Truck announced dealer incentive programs designed to allow dealers to promote sales in their own markets.

Dealers earn $200 to $500 per eligible retail sale for performance against quota. A dealer who sells 33.5 percent to 75 percent of his objective earns $200 per vehicle; 75.1 percent to 100 percent earns $300 per vehicle; and sales over 100 percent earn $500 each.

All 1989 and 1990 models are included in the program except for Chevrolet S-10 pickups, S-10 Blazers and W-4 cabover trucks and GMC S-15 Jimmys and S-15 pickups.

Toyota Motor Sales U.S.A. announced new dealer incentives: 1989 Camry, Corolla, $500 to $800, based on quota; 1990 Camry, Corolla, $100 to $400, based on quota; 1989 Tercel, $300; and 1989 Celica, $500.

The Camry and Corolla programs expire Jan. 3; Tercel and Celica, Dec. 4.

Hyundai Motor America is offering customer and dealer incentive programs that extend through Jan. 3. Customers who buy 1988 and 1989 Excel models will receive rebates of $500 to $1,000. Dealers earn $300 to $600, based on quotas, on 1988 and 1989 Excel. Also, salespersons earn random payments of between $50 to $1,000 on 1988 and 1989 Excels, and sales managers will receive cash amounting to 25 percent of their salespersons' bonuses.

Also Hyundai dealers are eligible for $1,000 to $1,500 on 1989 Sonatas depending on the number of vehicles sold.

Sterling Motor Cars' $3,500 to $5,000 customer cash rebate program on 1989 cars that was to have expired Nov. 2 has been extended until Dec. 31.

Audi announced rebates of $2,000 to $3,500 for dealers and cut-rate financing for customers.

PRODUCTION

Auto output still slow; 3 plants idle

By Kathy Boyer
AUTOMOTIVE NEWS STAFF REPORTER

With three car-assembly plants idle, U.S. auto production declined last week. Output has been trailing the year-ago week since late July due to high inventories and slow sales.

Automakers' targeted assembly of 144,506 cars fell 1.12 percent from the previous week and slid 8.17 percent from the 1988 week.

So far this year, 5,932,211 cars have been produced, 1.58 percent below last year's total at this point.

Last week's estimated production was split as follows: General Motors, 44.62 percent; Ford Motor Co., 26.34 percent; Chrysler Motors, 11.39 percent; Honda of America Manufacturing, 5.11 percent; Mazda Motor Manufacturing U.S.A. Corp., 3.10 percent; Toyota Motor Manufacturing, U.S.A., 2.83 percent; New United Motor Manufacturing Inc., 2.63 percent; Diamond-Star Motors, 2.53 percent; and Nissan Motor Manufacturing Corp. U.S.A., 1.45 percent.

Last week's scheduled truck output of 80,532 increased 6.87 percent over the prior week but was 8.33 percent below the year-ago week.

Year-to-date, 3,540,900 trucks have been assembled, 0.62 percent more than last year's production at this time.

GM's Wilmington, Del., plant and the Pontiac Grand Am line at its Lansing, Mich., facility closed today due to bloated inventories. They will be idle until Nov. 13.

GM's Fairfax, Kan., plant remains idle until Nov. 13 to adjust inventory. The Arlington, Texas, plant and the Detroit truck plant resumed output today after being closed due to slow sales.

Chrysler's St. Louis No. 1 plant remains closed until Nov. 20 because of poor sales of the Chrysler LeBaron J and Dodge Daytona models. The company's Grand Wagoneer line at the Toledo, Ohio, plant resumed output today.

Navistar International Corp. closed its Springfield, Ohio, plant last week to balance inventory. The plant is expected to resume operations today.

Car assembly up 12% in Canada

Scheduled Canadian car output of 26,728 units last week increased 12.82 percent over the previous week and 28.07 percent over the year-ago week.

So far this year, 831,862 cars have been built, 8.01 percent below last year's total at this point.

Truck production was targeted at 19,338 last week, 21.67 percent below the prior week and 8.14 percent lower than the year-ago week.

Chrysler's Brampton, Ontario, Jeep Wrangler plant remains idle until Nov. 13. When the plant reopens, daily output will be reduced from 340 per day to 300, leaving 180 workers on indefinite layoff.

Navistar International's plant in Chatham, Ontario, was shut down last week because of sluggish sales. The plant is expected to resume assembly today.

Petersen will retire March 1

Poling moving up to Ford chairman

By Charles M. Thomas and Laura Clark
AUTOMOTIVE NEWS STAFF REPORTERS

DEARBORN, Mich. — The surprise early retirement of Ford Motor Co. Chairman Donald E. Petersen gives his longtime associate Harold A. "Red" Poling an unexpected chance to run the company.

An emotional Petersen said Friday that he will retire March 1 from the company, which has gobbled up market share during his reign.

Stewardship of the company will pass to Poling, vice chairman and chief operating officer, who was voted to succeed him by the board of directors.

Petersen's voice trembled and tears welled in his eyes as he told the media and Ford employees, who crowded TV monitors at Ford headquarters in Dearborn, that his energy level had declined and he wanted to make a change in his life.

He cited the philosophy of Ernie Arbuckle, one-time dean of the Stanford graduate business school, who liked to change jobs every 10 years as a way of "repotting" himself.

"Well, 10 years are up and it's time to repot myself," said Petersen, 63, who will have been Ford's chief operating officer or chief executive officer for 10 years.

Poling, 64, has been a most visible No. 2 man, typically showing up with Petersen at company announcements and representing Ford at many major events.

Petersen said he told Poling of his decision only two weeks ago, although he had been thinking about it since last spring.

"I told him just before he boarded an airplane for Australia," mused Petersen. "He had 20 hours to think about it."

He and Poling apparently struck a deal whereby Poling agreed to extend his stay at Ford Motor Co. beyond his 65th birthday next September, if Petersen retired early.

Poling made it clear he will not work beyond three years, when he will be 67.

"I told him I already work seven days a week and can't work any harder," said Poling.

Petersen's pending retirement caused other executive promotions. Philip E. Benton Jr., who has been a corporate executive vice president and president of the Ford au-

Donald Petersen fights back tears Friday as he tells of his early retirement.

Saab to merge cars with Fiat's Lancia; announcement near

By Luca Ciferri
STAFF CORRESPONDENT

TURIN, Italy — Fiat Auto of Italy and Saab-Scania of Sweden are close to announcing a merger of their Lancia and Saab automotive divisions.

A Lancia-Saab grouping could make Fiat Auto the largest luxury-carmaker in the world by unit volume.

Under the proposed plan, the replacement for the aging Saab 900 would be produced in Italy, while the Lancia Thema would be produced in Sweden along with the Saab 9000, which shares the same platform.

A public announcement by Dec. 15 is expected to clarify the main details of the merger.

Even before the Oct. 20 collapse of Saab's talks with Ford Motor Co., Saab and Fiat were known to have discussed joint projects.

Spokesmen for Fiat and Saab have admitted only that links between the two companies will be "broader than simple technical cooperation."

Well-informed sources here say the merger will be achieved in three phases. The links will not involve either group's truck division.

In the first step, Lancia and Saab Division will be transformed into autonomous companies with their own capital and plants. Currently they are operating divisions of Fiat Auto S.p.A. and Saab-Scania AB respectively.

In the second stage, Fiat and Saab-Scania will become equal partners in a new financial holding company. The holding company will be responsible for two new companies, Lancia Automobili S.p.A. and Saab Car AB.

The holding company is likely to be based in a neutral European capital. Sources say Amsterdam, the Netherlands, is the favorite. Fiat's Iveco BV holding company, which oversees truck and bus operations throughout Europe, has been based in Amsterdam since its creation in 1975.

Japan chills automaker expansion

By Mary Ann Maskery
AUTOMOTIVE NEWS STAFF REPORTER

On Oct. 5 Minister Hikaru Matsunaga allegedly told carmakers "to take a prudent attitude toward increasing capacity."

TOKYO — Mazda's ambitious plans to expand capacity in Japan have apparently been scaled back after a word from the Ministry of International Trade and Industry.

The ministry's call for a show of prudence also has cooled expansion plans any other company might be harboring.

The Japanese government is feeling the pressure of U.S. protests against heavy capital investment in Japan. U.S. officials have expressed concern that overcapacity in Japan would lead to another export boom, which Undersecretary of State Richard McCormack said would be increasingly difficult for the world to cope with.

McCormack made appeals for curbs on capital spending in Japan during two days of biannual subcabinet-level talks in Washington that ended Nov. 4.

Heavy capital investment is particularly apparent in the automotive industry, where companies are competing to meet the needs of a growing domestic market.

Mazda estimates that its domestic sales for 1989 will reach 450,000 units. It hopes to increase sales to 800,000 by 1992. To meet that target, Mazda said it will have to increase production, and it is already making plans to expand and renovate its facilities at Hofu.

The change in attitude seems to stem from Oct. 5, when Minister Hikaru Matsunaga met with the leaders of all auto and truck companies. He told them to "take into account conditions inside and outside Japan and to take a prudent attitude toward increasing capacity," said a source at the talks.

Before that meeting, Mazda had indicated plans to expand capacity by about 240,000 vehicles a year. Now, Mazda says it has "not decided yet" on any specific figures for expanded capacity. The company said it is talking with local officials in Hofu about power needs, access roads and available labor and is not ready to announce any conclusion.

CHINA: *Once promising market faces uncertain future*

By Steven Vines
STAFF CORRESPONDENT

HONG KONG — Poor sales forced Guangzhou Peugeot Automobile Co. to shut its plant Nov. 3 for an indefinite period.

That followed the two-week closure of the Shanghai Volkswagen plant at the beginning of October and production cuts of Cherokee four-wheel-drive vehicles at the Beijing Jeep plant jointly owned by Beijing Automotive Works and Chrysler Corp.

Meanwhile, General Motors and Fuji Heavy Industries have pulled out of a proposed joint venture to make cars in northern China.

The major foreign automotive joint-venture companies in China are in deep trouble as the country

Campana retires after 10 years at Chrysler Motors

By Arlena Sawyers and Mary Connelly
AUTOMOTIVE NEWS STAFF REPORTERS

In July 1979, Joseph A. Campana followed Lee Iacocca from Ford Motor Co. to Chrysler Corp. — at a time when Chrysler teetered on the verge of bankruptcy.

Last week the 52-year-old former vice president of Chrysler Motors' Chrysler-Plymouth Division decided to take an early retirement, and became the first casualty of the campaign to streamline marketing operations.

Agencies react to Chrysler, Page 43

Campana said he decided to retire so he can spend more time on the golf course.

"Quite frankly, one of the major reasons for my deciding at this time to step aside was a recognition that after 30 years in the business and having been in on many of the tough markets of the past, I think I was ready to do a little more golfing," Campana told reporters in New York last week. He will retire at the end of the year.

"I will be involved with the company until I reach age 55."

Asked if he would be a consultant to the company, he said that was too strong a phrase: "I will be available as they need me."

Campana

Last week, Chrysler Motors announced that it will consolidate its three existing divisional marketing groups into one operation and dismantle the company's four-year-old holding company by the end of the year.

Campana was the odd man out.

Under the reorganization, Chrysler created two new positions that will be responsible for product marketing and product development. John B. Damoose was named vice president of brand marketing, responsible for all customer-oriented marketing programs and for maintaining brand identification in the marketplace. He was formerly vice president of the Dodge car and truck division.

Joseph E. Cappy was named vice

Story puts Flossmoor in spotlight

By Charles M. Thomas
AUTOMOTIVE NEWS STAFF REPORTER

Illinois State Trooper Jim Minx has become something of a media star since an Automotive News article on Oct. 30 publicized his plight — owning a pickup truck in Flossmoor, Ill.

He has had to sit still for photo sessions with national newspapers and magazines and has been interviewed by radio and TV stations from every corner of the country.

But it hasn't been all bad. Besides moral support, he has received financial help.

For more than two decades, Flossmoor has had an ordinance that essentially bans pickup trucks in the community.

Although it's OK to make deliveries in pickups, local pols don't want them parked in Flossmoor overnight.

Residents who own pickups either had to park them outside the village and walk home, or face $10 tickets for parking them in their driveways or garages.

In May, Minx succeeded in getting village officials to amend the ordinance to allow pickup truck owners to park them in their garages overnight.

He also has sued the village in federal court in Chicago to get the ordinance overturned as unconstitutional.

Minx said that on the day after the article appeared, radio and television stations from across the nation began phoning him for interviews.

STAN INSKEEWICZ

Interviews have kept Illinois State Trooper Jim Minx busy.

"I had 27 radio interviews from stations as far away as Vermont and Orlando," he said. "*ABC Nightly News* did an interview, and I got called from the news program *Current Affairs*."

Minx has had six photo sessions with newspapers and magazines from as far away as Washington and Dallas.

"I never expected to get such a response," he said. "But I still haven't heard from any of the automakers."

All the media attention over his battle with city hall has helped his crusade.

"A Teamsters local called to say it was organizing a boycott of all delivery trucks into Flossmoor," said Minx.

A Chicago radio station held a pickup truck rally in Flossmoor on Nov. 2, drawing some 30 vehicles. The rally included a parade through town with signs protesting the ordinance.

Minx also has received checks in the mail from people who support his effort to overturn the ban on pickup trucks in Flossmoor.

"A man from Florida sent me $500 for my defense fund," he said. "And a radio station in Phoenix raised $250 to pay for my parking tickets."

Minx said he has received about $1,000.

Meanwhile, village officials are mum on all the publicity, except to say that Minx should have asked the police department for permission to park his pickup in his driveway overnight.

Success of Saab's Malmo assembly plant may depend on U.S. sales

By Jim Henry
AUTOMOTIVE NEWS STAFF REPORTER

MALMO, Sweden — Saab car division's brand-new assembly plant here in southern Sweden could become a white knight or a white elephant.

It depends largely on how well Saab does in the United States.

Either way, it seems obvious that the last thing the company needs right now is more excess capacity.

Saab's capacity is already about 140,000 units a year compared with projected 1989 worldwide sales of about 120,000.

With the new plant, Saab's capacity should reach about 180,000 in the next two to three years.

Further, the $600 million-plus Malmo plant will build cars primarily for the United States, Saab's worst-performing market in recent years even though it remains the largest export market.

"The decision to establish this (Malmo) factory was made when the market looked different, especially in the United States," said Jan-Erik Larsson, senior vice president and general manager of Saab car division.

Planning for the Malmo plant began in 1986, when Saab-Scania of America reached its peak by selling 48,246 cars. It followed five consecutive years of record sales.

U.S. volume for 1989 is on a 34,300-car pace.

To try to boost sales in the United States, the company will hold the 1990 price on its entry-level 900 at $16,995, despite the addition of a standard driver-side air bag and anti-lock brakes.

Nevertheless, "There will probably be a problem (in the U.S.) next year," Larsson said.

"For '90, we're already seeing higher rebates, and, of course, that worries us. Nobody can afford to sell cars that way for a long time."

Larsson said that about 70 percent of Malmo's output will go to the United States, with the rest earmarked for Japan.

He said Saab intends to concentrate on its existing markets, but emerging markets like the Far East are part of the company's plans to use its excess.

The Malmo plant is due to hit its 38,000-unit annual rate by the end of 1990. Larsson said Saab must increase volume to justify its investment.

"Our goal is we have to come up in volume to make use of all the costs we have invested. We are forced to do that," he said.

The new Malmo plant initially will build only the 900, a model that is more than 10 years old. Once the plant has proved itself on the tried-and-true 900, it will start building Saab's newer 9000, introduced in 1986.

Saab officials at the plant opening last month said production of the 900 will continue "well into the '90s."

Two days later, Saab announced that talks with Ford Motor Co. had fallen through. Saab remains in search of a partner, primarily so it can devote more resources to product development.

Meanwhile, Saab's productivity is among the worst in Europe.

It takes Saab longer to build a car than most other European manufacturers. Company officials would not disclose exact figures.

Saab estimates absenteeism robs its plants of 25 percent of its workers every day. That figure includes women who can take up to

Bidwell, Tonkin 2nd-nighters at World Congress

Bennett E. Bidwell, Chrysler Motors chairman, and Ron Tonkin, president of the National Automobile Dealers Association, will address the Monday night session of the 1990 Automotive News World Congress, which will be held Sunday through Wednesday, Jan. 7-10, at the Westin Hotel in Detroit.

The 14th Automotive News World Congress, held in conjunction with the North American International Auto Show, is expected to draw industry leaders from around the world.

Speakers are experts and executives from the manufacturing, supplier and dealer sectors of the automotive industry.

Bidwell, recognized as one of the industry's most capable sales and marketing executives, has had two careers in the automobile industry, one at Chrysler and the other at Ford Motor Co.

Bidwell's career includes 27 years with Ford and a stint as president and chief operating officer of Hertz Corp.

Bidwell joined Chrysler in 1983

Big-truck orders climb for month

By Joseph Bohn
AUTOMOTIVE NEWS STAFF REPORTER

Net new orders for heavy trucks in September trailed last year's total but were up sharply from their depressed level in August.

Indicators such as order cancellation rates and good inventory control suggest a steady improvement in the market. But overall sales are still expected to continue at moderate levels during the coming year.

As financial analysts point out, demand in the current sales cycle has peaked, and the only question is how long and how severe the near-term downturns will be.

Net new orders for Class 8 trucks totaled 8,901 in September, down 29 percent from September 1988, but 40 percent ahead of the August total, according to Deutsche Bank Group of New York.

But Deutsche Bank said it believes the order trend will improve moderately improve in 1990.

The reduction in the cancellation rate on new-truck orders is one reason for that optimism. Cancellations declined from more than 20 percent during the summer to a more normal 14 percent in September, according to Frank Prezelski, heavy-truck analyst with Deutsche Bank.

Production continued to exceed orders in September, reducing the backlog of Class 8 truck orders to just under 43,000.

Deutsche Bank expects a convergence of production and order rates within the next few months, which should stabilize order backlogs at about 35,000 units.

Production has been declining sharply, and all manufacturers have indicated sharp schedule cuts for November and December.

September's Class 8 sales of 11,253 were down 14.69 percent from a year ago and were slightly below the 11,851 units retailed in August, according to the Motor Vehicle Manufacturers Association.

If the current rate of decline continues, sales for calendar 1989 will be about 147,000 units, down slightly from 148,657 in 1988.

Meanwhile, the industry is continuing to control inventories.

Inventories totaled 21,505 units Sept. 30, equal to a supply of 1.91 months, Deutsche Bank said.

Because of soft demand, the ratio of inventory to sales has been creeping up, though it is not expected to reach the dangerous levels seen in previous cyclical downturns.

Although order rates have moved up from last summer's depressed levels, they are still low. They are expected to remain in the 7,000- to 9,000-unit range for several months and then accelerate moderately. The outlook for 1990 is a 10 to 15 percent decline from this year's projected total of 147,000. That would put sales in the range of 125,000 to 132,000

Oppenheimer & Co., a New York-based financial firm, said that engine manufacturers are changing designs to meet the 1991 federal fuel-emissions standards. Those units will cost more and may initially be less reliable than the well-tested engines now on the road.

That will likely spur some pre-buying by truck users, artificially boosting 1990 sales to the detriment of 1991, said Oppenheimer analyst Charles S. Harris.

Pre-buying will likely add an extra month's worth of sales to 1990, added Prezelski, with most of the pre-buying expected to occur toward the end of 1990.

Plastic pickup box

Gary Johns of Rockwell Butler Polymet, Troy, Mich., stands next to a pickup box, which uses the company's fiberglass reinforced plastic box inner. Rockwell supplied the inner for the 1990 Ford Ranger. The material is 30 percent lighter than steel and could eliminate a bedliner.

Final-stage makers fight NHTSA ruling

Helen Kahn
SENIOR CORRESPONDENT

WASHINGTON — The National Truck Equipment Association has sued NHTSA over safety standard 204, which limits rearward displacement of steering columns. The suit was filed in the U.S. Court of Appeals for the 6th Circuit in Cincinnati.

The association has 1,400 members consisting of small businesses that manufacture or distribute truck bodies and related equipment.

Under NHTSA definition, they become final-stage manufacturers of commercial light trucks. They are thus responsible for certification of compliance with safety standards, unless they can get a "pass-through" of certification from the much larger makers of the chassis — often companies like Ford or General Motors.

In November 1987, NHTSA extended standard 204 to all light trucks, buses and multipurpose passenger vehicles with a GVW rating of more than 10,000 pounds or an unloaded vehicle weight of 5,500 pounds or less.

Certification for completed pickups and vans made for consumers by an auto company comes from the single manufacturer. But effective Sept. 1, 1991, truck equipment association members that are final-stage manufacturers must certify compliance with the steering column displacement standard for tens of thousands of customized trucks with unloaded weights between 4,001 and 5,500 pounds.

The National Truck Equipment Association petitioned for reconsideration in December 1987, saying its members have neither the money nor the technology to conduct crash tests. The association added that NHTSA failed to provide an alternative and failed to show a need to extend the standard to multistage vehicles.

NHTSA denied the association's petition in June 1989, saying that alternative means of complying were available. For example, said NHTSA, final-stage makers may "pass-through" the underlying certification of the chassis maker.

In its brief filed in the Cincinnati court, the association said that NHTSA failed to write a standard that is "reasonable, practicable or appropriate for the particular type of motor vehicle."

The agency did that by requiring a final-stage maker to conduct a test it is unqualified to make, the brief said. Other options would require use of an oversized chassis to avoid crash testing, or a "pass-through" certification from the chassis maker, which may not always be possible, the association said.

Testing imposed on final-stage makers, said the association, is not "practicable, appropriate or objective." It added that NHTSA's cost-benefit analysis did not address low-weight, multistage commercial vehicles. Moreover, said the association, NHTSA omitted material documents from the record.

The standard is, therefore, invalid, the National Truck Equipment Association concluded, because it is "arbitrary, capricious and an abuse of discretion."

TRUCK BRIEFS

GMC gets high CSI

PONTIAC, Mich. — Compact-truck customers get the best treatment from salespersons at GMC Truck dealerships, according to a J.D. Power and Associates survey.

GMC Truck dealerships topped the New Compact Truck Sales Satisfaction Index in the segment that included buyers of 1989 pickups, sport-utilities and vans.

In a Light-Duty Truck Customer Satisfaction Index report, Power also said that owners of 1988 GMC compact S-15 Jimmy and full-sized Jimmy sport-utility trucks and Suburban wagons are the most satisfied owners of domestic compact and full-sized sport utilities.

The Sales Satisfaction Index surveys owners three months after they purchase a new vehicle on how salespersons treated them when they purchased the truck, on the information they were given during delivery of the vehicle and on the quality of the truck. This is the first year Power's Sales Satisfaction Index has surveyed buyers of compact trucks.

Oshkosh profits decline

OSHKOSH, Wis. — Oshkosh Truck Corp. estimates that profits declined significantly in the fourth fiscal quarter that ended Sept. 30. Firm figures for the period have not been announced.

Oshkosh President John Carroll said he believes the fourth-quarter profit was 50 to 75 percent below last year's profit of $4.5 million.

He attributed it to higher startup costs of the firm's restructured chassis division in the face of a softer motor home market and significantly higher administrative costs for complying with government contractor regulations.

Idealease adds members

BARRINGTON, Ill. — Idealease Inc., one of the largest independent truck rental and leasing companies, added five new dealers to its network.

Idealease has 205 members and 340 locations throughout North America. Its members have about 12,000 straight trucks and tractors in service.

New members are Cerni Motors of Niles, Ohio; TDM Leasing of Sanborn, Minn.; Interstate Truck Leasing of Albert Lea, Minn.; Idealease of Norfolk of Norfolk, Neb.; and Sardis Truck Rental of Sardis, British Columbia.

U.S.-built Volkswagen models sold after June 30, 1989, are included in import totals.

GM car-market share dives below 32%

By Philly Murtha
AUTOMOTIVE NEWS STAFF REPORTER

General Motors lost four percentage points of car-market share in October and slipped to 31.94 percent for the month. It was GM's lowest market share of any month this year. The Japanese makes won the four points that GM lost last month.

The Japanese climb and the GM dive were the high and low points of a month that saw car and truck sales trail the year-ago total.

"Car deliveries have fallen right along with what we expected," said Ted Sullivan, auto consulting director of The WEFA Group in Bala Cynwyd, Pa. "We predicted a 6.5 million annual selling rate. In the final 10 days, it came in for domestics at 6.3 million."

In October, sales of imported and domestic cars and light trucks sagged to 1,091,447, down 10.67 percent from 1,221,778 last year.

Deliveries of U.S.-built and imported cars slumped 10.16 percent to 747,737, down some 84,000 from last October's 832,301.

Incentives flourished in October both years, although this year's rebates covered more of the newly introduced models than was the case last year.

In contrast to GM's loss of more than four points of market share in October, Ford Motor Co. and Chrysler Motors lost very little of their shares.

While Japanese cars gained almost four points at GM's expense, market shares of European and Korean cars slipped only slightly from last October.

In October, deliveries of U.S.-built cars fell 11.13 percent or 65,649 units. In the final 10 days of the month, domestic car deliveries trailed last year's comparable period by 2.46 percent.

Among the eight U.S. automakers, Nissan and Toyota reaped healthy year-to-year increases in domestic car sales because of incentives and consumers wanting to beat price increases.

"People came out to take advantage of the incentives. They were a little afraid of seeing big price increases. We sold 1,472 new vehicles vs. 1,162 a year ago," said Greg Penske, general manager of Longo Toyota, El Monte, Calif.

In October, the four U.S. car and light-truck makers delivered 828,156 vehicles, a decline of 11.57 percent from last year. Nissan sold 39.97 percent more U.S.-built vehicles than a year ago. However, the Big 3 automakers reported that U.S.-built car and light-truck deliveries were off from 8.57 to 18.38 percent this year.

Tire to spare

E&G Classics, Columbia, Md., offers a 1990 Lincoln Town Car classic spare kit. Suggested retail price for the kit, installed, is $1,295.

Canadian sales rebound; Ford sets model-year mark

By Bill Vance
SPECIAL CORRESPONDENT

TORONTO — A summer-long drop in Canadian new car and truck sales showed signs of leveling off in September.

Sales of domestically built cars slipped less than one percent from the same month a year ago, while imports fell 2.06 percent. For the year, domestic car sales are trailing 1988's tally by 5.45 percent.

Ford of Canada posted a 13.38 percent gain over year-ago volume. General Motors of Canada sales fell 4.14 percent, and Chrysler Canada was off 9.52 percent. Ford's showing, it's strongest September since 1978, topped off the best total-vehicle model-year sales in the 85-year history of the Canadian company. Its combined 347,194 model-year sales edged the previous high of 346,950 of 1988 and helped Ford increase its share of the Canadian car market 1.4 percentage points, to 20.1 percent.

"The 1989 model year clearly belonged to Ford," said Jack Clissold, Ford vice president of sales and marketing.

While GM's overall car sales fell, it did well in the truck market. GM's domestic trucks gained 8.26 percent for the month, and its imports were up substantially.

Bill Atkinson, GM's marketing vice president, gave credit to the complete truck line.

Among other imported trucks and vans, Mazda continued to boom along. Its MPV van led the company to a 56 percent year-over-year rise.

LEGAL BRIEFS

Would-be Ill. Lexus dealer can't sue

A person who is not an auto dealer cannot sue a distributor under the Illinois auto franchise law, according to the U.S. District Court for the Northern District of Illinois. The case is Knauz vs. Toyota Motor Sales U.S.A.

Henry W. Knauz, who applied to become a Lexus dealer, received a letter of intent from Toyota on April 29, 1988. But it was predicated on a number of conditions, including submission of a detailed set of building plans. Knauz said he met the building plan condition, but Toyota disagreed and rescinded its letter of intent on Aug. 15, 1988.

Knauz sued Toyota, alleging breach of contract and violation of the state auto franchise law.

Judge John A. Nordberg dismissed the franchise law count. He said the law "protects an existing dealership" but "forecloses the claim of a dealer who has applied for, but has not been granted, a new franchise."

Montreal exporter out duels Chrysler

OTTAWA — Canada's Competition Tribunal has ordered Chrysler Canada to resume auto parts sales to a Montreal exporter.

The decision supporting Richard Brunet is seen as a precedent that will help small, independent marketers in their dealings with suppliers in all Canadian businesses, not just auto parts.

Brunet started an auto parts export business in 1976. He began to obtain parts from Chrysler Canada the following year. He then sold them in South America and Europe. In 1986, Chrysler told Brunet that all exports would be handled by Chrysler Corp. in the United States, and that if he wanted parts, he had to get them through the corporation.

Brunet said that meant increased prices and shipping problems. He tried to buy the parts directly from Chrysler stores in Canada, and that caused Chrysler Canada to send out a bulletin warning its dealers against that, he said.

Brunet's business dropped precipitously, and he took his case to the Competition Tribunal.

In ruling in Brunet's favor, the federal bureau noted that Chrysler may have had legitimate reasons for doing what it did, but that was not enough.

"There was no warning that he might be cut off, and there was no face-to-face meeting to discuss the situation," the tribunal said. "Brunet has been substantially affected by the denial of supplies. Losses of $200,000 in sales and $30,000 in gross profits constitute a substantial effect for a small business such as Brunet's."

Said Wayne Critchley, a senior official with the bureau, "This shows that the Competition Act provides protection for small businesses in this situation."

Jury sides with GM in Chevette radio fire

A jury in Baltimore has absolved General Motors of liability in a federal court case involving an electrical fire in a 1982 Chevette.

Henry Danilowicz bought the Chevette from Alamo Auto Leasing, where it had accumulated 36,000 miles; he added 33,000 miles. When he sued GM, the Chevette was 4½ years old and had been driven nearly 70,000 miles.

The GM radio had been removed and replaced with a used eight-track tape player/radio, and the radio fuse had been changed from 10 to 20 amperes. When the instrument panel fire occurred, Danilowicz stopped the car but suffered an angina attack for which he was hospitalized.

He claimed the fire aggravated his heart condition, causing a second heart attack and more angina attacks.

The plaintiff's expert witness claimed the fire was caused by a manufacturing problem. GM's expert blamed the fire on the installation of the aftermarket radio.

Chrysler, supplier cleared in fatal car fire

READING, Pa. — A jury has decided that Chrysler Corp. and United Technologies Automotive are not responsible for a fire in a police car that claimed the life of a Manheim, Pa., policeman.

After hearing nearly three weeks of technical testimony, the U.S. District Court jury concluded that a high-low headlight-beam-selector switch was not to blame for the death of Sgt. Delbert R. Flowers Jr.

Flowers' widow, Nancy, brought the product-liability suit, alleging that the headlight selector switch sparked the fatal blaze because it was defectively designed by United Technologies Automotive.

Nancy Flowers' attorney, Robert A. Longo, said she is considering an appeal, which would have to be filed by mid-November.

Sgt. Flowers, a nine-year member of the Manheim police force, died in the back seat of a 1982 Dodge Diplomat when the fire filled it with a lethal gas. The fire occurred Nov. 9, 1984.

Attorneys for the corporations successfully argued that the switch in question, with some 14 million in use since June 1978, was not defectively designed.

A witness speaking for Chrysler blamed the fatal fire on a short circuit that he said was caused by the improper installation of a wire after the car left the factory.

GM asks court to overturn award

HELENA, Mont. — An attorney for General Motors has asked the Montana Supreme Court to toss out a $1.3 million damage award against the automaker for a 1983 accident that left a man paralyzed.

Richard Bowman, a Minneapolis lawyer for GM, told the court a new trial should be granted because important information was kept from the jury during the original trial last year. Lawyer Dennis Conner, representing Andrew Krueger of Great Falls, contended the award should stand because GM manufactured a defective and dangerous product without warning consumers.

Krueger, 31, was injured in February 1983 while working under a 1976 Chevrolet four-wheel-drive pickup truck. When he removed the driveshaft to the front axle, the truck rolled over him. Krueger suffered a broken neck and is paralyzed from the chest down. Bowman argued before the court that the award would have been less had the jury been told that Krueger had a shorter-than-normal life expectancy because of drug abuse.

"There's every evidence that this individual was a habitual risk-taker," he said. He noted that Krueger was arrested three times in Texas for possession of marijuana in 1978-79, and was arrested in Great Falls in March 1988 for cocaine distribution. Such habits were detrimental to Krueger's health, Bowman said, and should have been known to the jury before it awarded damages based on Krueger's life expectancy.

Bowman also said the jury was improperly prevented from hearing testimony of GM expert Richard Keefer, who had tested several late-model, four-wheel-drive vehicles with the same type of transmission that was on the Chevy pickup. The tests showed that all the vehicles would roll when the front driveshaft is removed, Bowman said, showing that the allegedly unsafe design is still being used.

Prevented from proving that the transmission design in 1976 is no different or more unsafe than one used on 1988 vehicles, the company was hamstrung in presenting its case. Krueger assumed the risk when he removed the driveshaft without first applying the emergency brake or blocking the truck's wheels, Bowman said. Krueger was familiar with such vehicle repairs and should have known the danger, he said.

But Conner said Krueger is not to blame for his accident. "Andrew Krueger did not know the truck would roll," Conner said. "If he would have actually known of that danger, then he could be said to have assumed that risk." He criticized GM for raising the drug-use issue, saying it was done only to rouse prejudice against Krueger in the eyes of the court. He said the automaker never offered proof of a link between drug use and a shorter life for Krueger.

Former dealer sentenced on 3 used-car counts

Joseph L. Sperino, a former dealer who once sold BMWs and Mercedes-Benz cars from Prestige Motors in St. Louis, has been given a two-year suspended prison sentence on each of three counts of misrepresenting prices, consignment fees and warranties on used cars.

Sperino is now on supervised probation. The 1988 case dealt with incidents in 1986 and 1988.

A parallel civil suit charged Sperino with odometer fraud, repair fraud and falsely claiming affiliation with Boulevard Motors, an authorized Mercedes dealership. In a settlement, Sperino was barred from selling cars in Missouri and was fined $25,000. Of that, $20,000 was awarded to consumers who bought 19 vehicles from Sperino.

Chrysler ad agencies restructure

By Arlena Sawyers
AUTOMOTIVE NEWS STAFF REPORTER

DETROIT — The marketing shake-up at Chrysler Motors has had a ripple effect for at least two of its advertising agencies which have restructured their own operations.

There is no indication yet that advertising spending or creative content will change as a result of the reorganization.

Campbell-Mithun-Esty Advertising/Detroit, which handles Chrysler's Jeep-Eagle Division account, last week restructured its management team and pink-slipped 12 "lower level" staff members and one supervisor partly as a result of Chrysler restructuring its marketing organization.

Ross Roy Communications, which does marketing programs for Chrysler, started reorganizing its operations two months ago with Chrysler's $1 billion cost-cutting program — among other things — in mind.

On the other hand, BBDO Worldwide, which handles Chrysler's Dodge account, said it has no plans to make any staff changes based on the automaker's reorganization.

Bozell, Jabobs, Kenyon and Eckhart of Birmingham, Mich., which handles Chrysler and Plymouth brand advertising, declined comment last week, but is considered likely to restructure.

The $20 million coporate advertising account handled by Bozell could be in jeopardy.

Advertising Age reported Chrysler officials have solicited corporate account ideas from BBDO and Campbell-Mithun-Esty, although there is no formal agency review in process.

Advertising Age said the expected 1991 retirement of Chrysler Corp. Chairman Lee Iacocca — the corporate ad spokesman — may be one reason the automaker is open to new ideas.

The trade paper said competitors may consider the Chrysler corporate account vulnerable because "Ronald DeLuca, Bozell's vice chairman and longtime confidante of Iacocca, has curtailed his day-to-day agency activities."

At Campbell-Mithun-Esty, Thomas Bernarden becomes senior vice president, management director, Jeep-Eagle Group and David Van Peursem was promoted to the newly created position of executive vice president, director of business development.

Bernardin was formerly management director of the Jeep Group and Van Peursem had been management director of the Eagle Group.

Under the restructured plan, Bernardin will direct all Jeep and Eagle domestic and international marketing functions including account services, media, collateral and research.

Van Peursem is now in charge of new business development and future planning strategies for the agency and clients.

According to Campbell-Mithun-Esty spokeswoman Eileen Wunderlich, the agency quadrupled its staff after Chrysler acquired American Motors two years ago. The 13 layoffs reduced the staff to 277.

"It's a very small percentage of the staff," she said.

"It's unfortunate, but it is the nature of remaining competitive."

Ross Roy Communications began its reorganization in September when it reduced its creative department to three work groups: Chrysler/Plymouth and Jeep Eagle Group; Dodge/Dodge Truck and Alfa Romeo Group and Consumer Promotions Group. Previously, there were five groups.

Earlier this month, former creative director Michael Labiak, was named director of creative services in charge of the streamlined creative groups.

Two months ago, Michael Webster was named management supervisor in charge of corporate and dealer merchandising for the new car divisions.

Campbell-Mithun-Esty's Wunderlich said her firm does not expect any changes in billings.

Richard Ward, Ross Roy's executive vice president and general manager, said "at this point we have not seen any reductions in billings, but I don't know what Chrysler's plans are." Wunderlich and Ward agree that the restructuring is a way to operate more effectively and efficiently.

Ross Roy's reorganization also involved a staff reduction, mostly through attrition.

"I don't know the total number — less than 10," Ward said.

Ross Roy Communications has 300 employees. It is a division of Ross Roy Inc., an advertising agency in Bloomfield Hills, Mich.

However, it's business as usual at BBDO Worldwide in Southfield, Mich., said William Kelly, president and chief executive officer.

"They're (Chrysler) going back to the system they had five years ago — more streamline," said Kelly. "We didn't change terribly much when they changed to the brand management system; we don't have any plans to change terribly much now."

While Bruce Andrews, senior vice president and assistant general manager at Bozell, Jacobs, Kenyon and Eckhart, refused comment, sources in the automotive advertising community expects the firm to follow Campbell-Mithun-Esty and Ross Roy's leads and make some staff changes.

INVENTORY

FROM PAGE 2

Mitsubishi and Yugo also were over 100 days.

Among the Big 3, GM's total domestic and captive import stockpile climbed 9.91 percent, to 812,643, on Nov. 1, for an 88-day supply. On Oct. 1, GM had a 58-day supply of unsold cars.

Combined car stocks for Ford Motor Co. rose 6.37 percent above Oct. 1 to 472,900, equal to a 75-day supply. Last month, Ford had a 64-day supply.

Chrysler Motors started November with 251,380 unsold U.S.-built and imported cars in stock, a 79-day supply, up from 68 days last month.

Except for Honda, all the Japanese carmakers with transplant operations here had higher combined car inventories and days' supplies on Nov. 1.

Honda was able to maintain a 31-day supply, although its combined car stocks rose 13.85 percent to 66,379. In October, Toyota's combined car stocks grew 22.38 percent to 101,371, a 45-day supply. That was up from last month's 37 days.

Nissan's combined car stocks rose 5.34 percent to 149,055, equal to a hefty 99-day supply, in spite of a 47.44 percent year-to-year sales gain last month.

Combined U.S.-built and import car stocks for Mazda rose 23.93 percent to 49,456, a 68-day supply.

Tokyo show draws record 1.9 million

TOKYO — The 28th Tokyo auto show drew a record 1,924,200 persons. The last Tokyo show, in 1987, attracted 1.29 million, and the old record was 1.5 million in 1969.

Some 330 domestic and foreign companies took part in the show, held Oct. 26-Nov. 6 at the new Makuhari Messe convention center.

This year's auto show in Frankfurt, West Germany, drew 1.3 million.

RETIRE

FROM PAGE 3

president for brand development and is in charge of "identifying customer wants and needs to ensure that Chrysler's product development meets those customer requirements," said the automaker in a prepared statement.

Cappy and Damoose will continue to report to Bennett E. Bidwell, Chrysler Motors chairman.

Campana, a Yale University graduate and former new-car dealer, spent 15 years in various sales and marketing managerial postions at Ford before joining Chrysler in July 1979. His title was director of marketing plans.

Credited with bolstering Chrysler's truck operations during the lean years, Campana's retirement marks the end of a decade on the fast-track with the company. He was promoted several times during his tenure:

- October 1980, director, marketing plans and programs;
- July 1981, general manager, truck operations;
- October 1982, vice president, marketing;
- August 1987, vice president, Chrysler-Plymouth marketing
- January 1988, vice president, Chrysler-Plymouth Division.

Calling the automobile industry a "cyclical business," Campana said he believes Chrysler is doing what it has to do to remain viable in a constantly changing, highly competitive market.

"We have to prepare for different times in the automobile industry," said Campana. "It's a cyclical business. Over the past several years, we've enjoyed an unbelievable time of good market conditions. Right now we are facing a time when there is great overcapacity in this country.

"That capacity has to be adjusted to demand. In that process, we have to be a lot more efficient in the way we run our business. I think Chrysler, in terms of restructuring, is doing all the right things, and they are doing it at a time when they are planning ahead of the need to do it as opposed to waiting."

CONGRESS

FROM PAGE 3

as executive vice president, in charge of sales and marketing and public affairs. In 1985 he was named vice chairman of Chrysler Corp., overseeing Washington affairs, personnel and organization, public affairs and corporate planning and marketing strategies.

Bidwell was instrumental in Chrysler's purchase of American Motors.

He was named vice chairman of Chrysler Motors in 1987, responsible for automotive sales and service activities, and marketing for all passenger cars and trucks.

He was named chairman of Chrysler Motors Corp. in November 1988.

Bidwell

Tonkin

Ron Tonkin owns several dealerships in Portland, Ore., ranging from Ferrari and Lotus to Dodge, Chevrolet and Suzuki.

During his nine months as president of NADA, the outspoken Tonkin has been one of the most visible NADA presidents in history. He has blasted automakers on issues like fleet subsidies, rebates and mandatory advertising associations. He inspired the creation of the Rough Riders, a group of 1,500 dealers dedicated to pushing the dealers' agenda.

His administration has been highlighted by a whistle-stop tour of major U.S. cities where he spoke to the media on the plight of dealers. He has called dealers "an endangered species."

Tonkin and the NADA recently called on dealers to reduce their inventories to a 15-30 day supply to lower operating costs.

Ford, Olds, VW adjust rebates

By Arlena Sawyers
AUTOMOTIVE NEWS STAFF REPORTER

Ford Motor Co., Oldsmobile and Volkswagen have adjusted their incentive programs.

Ford increased customer rebates on the 1989 and 1990 Escort to $700 from $600 and on the 1990 Probe GT to $1,000 from $800.

The automaker added 1989 and 1990 Mustangs equipped with 2.3-liter engines and automatic transmissions to the program with a $500 cash rebate.

The rebate on the 1989 Econoline E150 dropped from $1,250 to $500, and a $500 rebate has been placed on the 1990 Econoline E150.

In lieu of cash rebates, customers may choose special finance rates. No expiration date was given for the customer incentives.

The $1,000 dealer incentive on the 1989 and 1990 Taurus SHO has been extended to Jan. 9. Based on quotas, dealers will receive $200 to $500 on 1989 and 1990 regular Taurus, Thunderbird, Tempo, Escort, Aerostar and F-Series trucks. The program expires Jan. 9.

Ford also offers dealers $200 to $400 on 1989 and 1990 Festiva, based on quotas. The program expires Dec. 31.

On the 1989 Ranger, quota-based incentives range from $250 to $750. Dealers can earn $250 on 1990 Ranger and 1989 and 1990 Bronco II. Those programs expire Nov. 27.

Oldsmobile added the Cutlass Supreme four-door to its "Option Bonus Program" that offers customers $200 to $1,000. The program, which runs indefinitely, is offered with alternative financing.

VW raised the customer incentive on its 1989 Vanagon Camper to $4,000 from $3,000 and extended incentives until Nov. 30. Alternative financing is also offered.

INCENTIVE WATCH

FIRE

FROM PAGE 2

be affected. They noted that the industry's two primary suppliers of complete air-bag systems — TRW Inc. and Morton International — have begun sourcing limited quantities of sodium azide overseas. But both suppliers acknowledge that there is little excess sodium azide capacity in the world, and nowhere near enough to offset an extended shutdown at McMasterville, the world's largest producer of the substance.

"I think the situation is a little more serious than the carmakers are admitting," said an air-bag industry executive.

The TRW spokesman said the company's current supply of air-bag propellent will last through the end of this year. A Morton spokeswoman said Morton's supply will last "three to four months."

A one-month delay on air-bag deliveries to the industry during the next year could affect production of about 200,000 cars.

Federal rules now require passive restraints in all cars built after Sept. 1, 1989. Automakers have been meeting the standards by installing either air bags or automatic seat belts.

An NHTSA spokesman declined to say whether the agency is discussing a reprieve for carmakers if they are left without air bags.

TRW and Morton International were apparently under the initial impression that the latest fire would interrupt production only two to three weeks. But CIL, a subsidiary of Imperial Chemical Industries in the United Kingdom, has assembled a committee of chemical experts from Great Britain and the United States to investigate the situation. One source described it as "mystifying."

According to the CIL spokeswoman, production will be halted until the committee determines why the chemical is erupting and learns how to prevent it.

"They can't just stop producing the stuff," said Claude Gianino, a spokesman for TRW, which supplies about 50 percent of the air-bag market. "GM, Ford and Chrysler aren't going to shut down just because some British chemical company doesn't want to make a product any more. There will be cannons on their heads and lawsuits on their back if they don't move quickly on this thing."

At least four other fires and explosions have occurred in the past year at factories where sodium azide is blended and packed into metal canisters. The canisters are then inserted into modules, which are housed in the steering column of cars with driver-side air bags.

When a car's sensors signal a collision, an electrical impulse is relayed to the module, and the air bag inflates with nitrogen gas.

The factory mishaps apparently were caused by the presence of moisture on the water-sensitive material. The CIL spokeswoman said the company simply does not know what is causing the Quebec eruptions.

Approximately 3.3 million cars are scheduled to contain air bags this model year, up from about 480,000 in 1989. Chrysler Motors has made the biggest commitment this year. Air bags are standard equipment in virtually all of its U.S.-built cars. Ford Motor Co. has scheduled air bags for about one million cars, and General Motors has air bags on more than a dozen models.

After CIL's Oct. 8 supply interruption, TRW and Morton scrambled to source sodium azide from the world's only other manufacturers of the ingredient — one in West Germany and one in Japan. The Japanese source is already producing at capacity, and the European operation is not large enough to serve as a primary supplier.

The TRW spokesman said the company is paying "a premium price" for the replacement material, but said the cost is "acceptable for a temporary situation."

TRW and Morton are also negotiating to obtain the compound from new plants in India and South Africa, but those facilities have not yet begun production.

"Prudence would tell you not to have a single source on something that's this important," the TRW spokesman said.

Neither TRW nor Morton would speculate on what it will do if the McMasterville plant fails to resume production by year's end.

PRODUCTION

GM output of new vans is 19,252

By Kathy Boyer
AUTOMOTIVE NEWS STAFF REPORTER

General Motors has produced an estimated 19,252 of its new 1990-model plastic-bodied minivans. Last week's scheduled output of the three minivans built at GM's Tarrytown, N.Y., plant was 2,043.

That total was divided this way: Chevrolet Lumina APV, 1,194; Pontiac Trans Sport, 539; and Oldsmobile Silhouette, 310.

Truckmakers built 315,534 units in October, 1.99 percent more than September's 309,388 but 11.34 percent below the year-ago mark.

Last week's scheduled truck build of 76,649 dipped 8.29 percent from the prior week's figure and 15.05 percent from the year-ago week.

Automakers built 620,406 cars in October, 7.77 percent more than the September total of 575,698 but 6.87 percent below the 666,199 built in October 1988.

Car assembly was targeted at 131,900 units last week, 8.47 percent below the prior week and 20.54 percent below the year-ago week.

Last week's estimated production was split as follows among the 10 car builders: General Motors, 40.99 percent; Ford Motor Co., 26.52 percent; Chrysler Motors, 13.21 percent; Honda of America Manufacturing, 5.50 percent; Mazda Motor Manufacturing (U.S.A.) Corp., 3.39 percent; Toyota Motor Manufacturing U.S.A., 3.11 percent; New United Motor Manufacturing Inc., 2.87 percent; Diamond-Star Motors, 2.41 percent; Nissan Motor Manufacturing Corp. U.S.A., 1.59 percent; and Subaru-Isuzu Automotive, 0.41 percent.

Subaru-Isuzu in Lafayette, Ind., was added to the Automotive News statistics last week.

GM idled its Flint, Mich., and Pontiac (Mich.) West plants because of sluggish sales.

GM plants in Fairfax, Kan.; and Wilmington, Del.; and its Pontiac Grand Am line at the Lansing, Mich., plant resumed output today after being idle because of slow sales.

Ford said it will reduce output at its truck plant in Louisville, Ky., by 20 percent beginning Jan. 15. About 300 to 350 workers will be laid off.

Canada cars up, but trucks slip

Canadian auto production in October totaled 93,259, 11.92 percent above September's 83,324 and 6.53 percent more than the year-ago month's 87,544.

Truck assembly last month of 79,979 slid 2.35 percent from September's 81,900 and dipped 5.49 percent from the October 1988 total of 84,629.

Hyundai Auto Canada was added to the Automotive News statistics last week.

Chrysler's Brampton, Ontario, plant reopened today after being idle for two weeks because of high inventories of the Jeep Wrangler.

Car loans lengthen in slack market

Some lenders give 84-month terms

By Philly Murtha
AUTOMOTIVE NEWS STAFF REPORTER

New-car loans and leases as long as 84 months, which started in Florida, are spreading to other parts of the country. The move is fueled by regional competition between lenders, steeper new-car prices and a slack sales climate.

At least three years ago, several major lenders in Florida offered 66-month terms in response to the marketplace.

And two years ago, trendsetting Florida banks began to specialize in 72- and 84-month luxury car loans on amounts over $15,000.

Banks in Kentucky, Indiana, New York Maryland and California told Automotive News that they have followed suit to stay competitive. Banks have 44.1 percent of outstanding auto paper, and finance companies hold 30.5 percent, according to the Federal Reserve Board.

The 66-month-plus terms are an extension of a longtime trend. Twenty years ago, the average finance company auto loan tracked by the Fed was just over 36 months. A decade later, it was 43.7 months. By the end of 1988, the average maturity was 56.2 months.

But extended term financing means car owners are out of the market longer. Most people trade in or sell a new car after 30 to 40 months, according to bankers and finance firm executives.

An owner of an average-priced new car with a 60-month loan has to make 51 monthly payments to

LOOKING EAST

Changes behind Iron Curtain may mean Western help for a stodgy auto industry

By Richard Johnson
AUTOMOTIVE NEWS STAFF REPORTER

FRANKFURT, West Germany — The dramatic political changes in Eastern Europe are pulling the Iron Curtain back on an auto industry badly in need of help.

Eastern European carmakers are looking westward, but changes may be slow in coming.

Hidebound auto concerns are still beset by meddling central planners, difficulties in adjusting to freer market conditions and a range of options so limited by lack of hard currency that makers are forced into curious management decisions and wild flip-flopping that can exasperate potential Western partners.

Some key cooperation discussions have failed in recent months and others appear to have stalled.

Enthusiasm for low-priced exports to North America — rampant

Car sales fall 23%; GM topples furthest

New incentives anticipated

By Charles M. Thomas, Mary Connelly and Philly Murtha
AUTOMOTIVE NEWS STAFF REPORTERS

The new-car sales slump is expected to trigger the next round of retail incentives this week.

Sales of U.S.-built cars dropped 23.08 percent in the first 10 days of November as consumers continued to hedge on spending. The 143,467 total was the lowest for any 10-day period since early January 1988.

Still, analysts aren't fretting. They expect sales to rise gradually in the weeks ahead.

General Motors' car sales dipped 29.11 percent against slides of 23.51 percent at Ford Motor Co. and 22.55 percent at Chrysler.

The Big 3 reported early November light-truck sales declines of 16.56 to 26.27 percent.

Pontiac last week notified its dealers that 1990 customer cash rebates or special low-finance-rate alternatives on 1990 models, and 1989-model dealer incentives will end Wednesday. Often, Pontiac is the bellwether for other GM divisions.

"An ending date for current programs was never announced," said a spokeswoman for Pontiac. "We will announce new programs Wednesday to keep our dealers competitive."

She said Pontiac will introduce some new incentive programs and some that are similar to existing programs.

Some analysts were surprised by the nosedive in sales, but they were quick to point out that the unusually high incentives in late summer stole sales from October and from November's first 10 days.

The result was that Big 3 car and light-truck sales in the opening 40 days of the 1990 model year were off nearly 17 percent from early 1989-model-year sales.

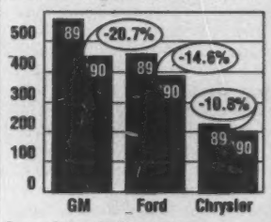
The slump in car sales and a slight dip in retail sales overall are signs of a weakening economy that could prod the Federal Reserve Board into lowering interest rates.

But it is doubtful if that alone would give car sales a jolt. A 1 percent decline in interest rates would mean a savings of only $60 annually on the financing of a $12,000 vehicle.

Meanwhile, automotive analyst Ronald Glantz of Montgomery Securities in San Francisco, places the blame for sagging auto sales squarely on GM.

40 days of trouble

Chart compares Big 3 unit sales for first 40 days of model years 1989 and 1990. Figures in thousands.



Source: Automotive News figures

AUTOMOTIVE NEWS / CHRISTINE BEEVER

"GM is responsible for 59 percent of the decline between the third quarter and Oct. 1 through Nov. 10," he said. "This is a payback for the third-quarter incentives."

Still, analysts expect domestic car and truck sales will balance out, averaging about a 6.5 million annual rate for the fourth quarter. That compares to a 7.9 million rate in the third quarter and a 7.4 million rate in the fourth quarter last year. On a calendar-year basis through October, U.S.-built cars were selling at a 7.3 million rate,

Minivan planned off '94 Taurus platform

By Laura Clark
AUTOMOTIVE NEWS STAFF REPORTER

Ford Division will replace its rear-wheel-drive Aerostar minivan in the 1994 model year with a multipurpose vehicle based on the same platform as the next generation Taurus/Sable.

The vehicle, code named WIN88, will give Ford an entry into the booming front-wheel-drive minivan market now dominated by Chrysler Motors. General Motors introduced three fwd minivans this fall and Mazda's MPV has been a hot seller since its fall 1988 debut.

The WIN88 is expected to be more carlike than the Aerostar. Its styling, according to those close to the project, is similar to the Nissan/Mercury fwd minivan that will be built at Ford's Avon Lake, Ohio, truck plant beginning in the second quarter of 1992. But sources said the next generation Aerostar will be larger than the Nissan/Mercury minivan and will meet car safety standards.

Sources said the WIN88 was part of the PN38 flexible truck platform program but was switched to the next generation Taurus platform when PN38 was dismantled. PN38 was to provide the basis for all of Ford's truck platforms in the 1990s. Ford Automotive Group President Philip Benton told Automotive News in August that the PN38 has been modified due to cost and expected industry sales in the future.

Ford supplier sources said the replacement for the Aerostar will be built in Oakville, Ontario. The plant currently builds Ford Tempo and Mercury Topaz. The next generation Tempo/Topaz, code named CDW27, will be built in St. Louis. The Kansas City, Mo., plant, which also builds Tempo/Topaz, will become a truck plant under this plan.

Ford Division dealers have been anxious to have a fwd minivan since the Nissan/Mercury minivan project was announced last year. But divisional executives said a Ford Division version was not feasible because of limited capacity at Ford's Avon Lake, Ohio, plant.

The next-generation Econoline full-sized van, code named VN58, will debut in the 1992 model year and will be built alongside the Nissan/Mercury minivan at Avon Lake. The next Econoline will also be rwd. Like its predecessor, the VN58 will go through the final assembly process at Ford's Lorain, Ohio, assembly plant.

Talk from the Top

Exclusive interviews with six industry influentials in the special section following Page 20.

Lee Iacocca, Chrysler: "It's going to be a difficult year."

Roger Smith, GM: "We can have 15 million total vehicle sales next year."

Harold Poling, Ford: "We'll see a decline next year."

Ron Tonkin, NADA: "We'd be very fortunate to maintain a 14.5 million total sales year."

Owen Bieber, UAW: "We're going into a tough set of negotiations."

Samuel Skinner, DOT: "We have to make sure we don't over-regulate."

Air-bag problems?
Al Slechter, Chrysler Motors' technical affairs director, said the automaker is investigating complaints that its air bags cause hand burns and facial abrasions when they inflate. Page 3.

Chrysler investigates air-bag face scuff and hand burns

By Diana T. Kurylko
AUTOMOTIVE NEWS STAFF REPORTER

WASHINGTON — Chrysler Motors is investigating complaints that its air bags cause hand burns and facial abrasions when they inflate.

Chrysler first learned of the problems in September, when passive restraints became mandatory in U.S. cars, said Al Slechter, federal technical affairs director for the automaker.

The facial abrasions, similar to a rug burn, can result from the force of the air bag striking the driver's face.

The hand burns have occurred when gases from the inflated air bag are vented onto the steering wheel and the driver's hands. At least one driver has suffered second-degree burns.

Chrysler may redesign the vents that allow hot gases to escape from the air bag, Slechter said.

"The (facial) abrasion is impossible to test for in the laboratory, Slechter said. "You're using a dummy and the 'skin' doesn't relate to human skin.

"It slaps some people in face, but it is not a thermal burn. There is no way in our design where hot gases from the bag could get to the face of the driver," Slecther said.

Safety experts at General Motors, Ford Motor Co. and Mercedes-Benz of North America acknowledged that their air bags have caused facial abrasions. But they said the skin irritations are a necessary trade-off for the potential life-saving benefits of air bags.

"It is a natural consequence of the bag, minor when you consider the alternative," a Mercedes spokesman said.

Injuries to the hands have been more severe than those to the face. As the driver makes contact with the inlated air bag, gas is forced out of the bag through a vent.

Vent locations vary by manufacturer. Slechter said the vents Chrysler uses are identical to those used by Mercedes-Benz, on the back side of the bag, facing the front of the car.

"It was our best guess to put the vents at the three and nine o'clock position to minimize the burning," Slechter said.

Slechter said GM vents are also at three and nine o'clock, and Ford's are at four and 10 o'clock.

A Mercedes spokesman said its current air bags have vents at two, four, eight and 10 o'clock.

Chrysler is considering moving one of the vents to a 12 o'clock position and may eliminate the other, Slechter said.

Even if the vents are relocated, it may be impossible to eliminate air-bag injuries, he said.

"We're concerned to the extent that we want to further optimize

Damoose gets tough at Chrysler

By Arlena Sawyers and Dutch Mandel
AUTOMOTIVE NEWS STAFF REPORTERS

HIGHLAND PARK, Mich. — When the going gets tough, John B. Damoose gets tougher.

Declining car sales, fierce competition and a predicted recession are making times tough for the auto industry. So Chrysler Motors is taking tough measures.

Two weeks ago, Chrysler named Damoose, 43, the vice president of brand marketing in charge of customer-oriented marketing programs and maintaining brand identification in the marketplace. He was formerly Dodge car and truck division vice president.

A self-described "perfectionist to a fault," Damoose has a style of hands-on management and teamwork that involves every level of Chrysler's marketing department, its agencies and its dealers.

"I'm participative. I have a fairly healthy disregard for structure," said Damoose. "I work with the people at all levels of the organization, not because it's a modern, contemporary thing to do, but because that's my personality.

"I lead by example. I believe in teamwork wholeheartedly, with every fiber in my body. I believe you generate that by working right with the people who are doing the jobs."

Damoose is considered an aggressive, take-charge manager by his peers. He is credited with increasing sales and restoring dealer and customer confidence at Audi of America when it was faced with reports that its cars accelerated unexpectedly.

AUTOMOTIVE NEWS/JOE WILKSEN

Chrysler's John Damoose: "I lead by example. I believe in teamwork."

His latest appointment is a continuation of a fast-track career that started almost 20 years ago and spanned three automobile companies and one government agency.

Armed with a bachelor's degree in economics from the University of Michigan and a master's degree from Columbia University, Damoose went to work in the CIA's Office of Strategic Plans and Operations 1971. Two years later, he began his automotive career at Ford Motor Co. on Lincoln-Mercury's sales and marketing staff.

By 1981, Damoose was appointed marketing strategy manager at Ford North American auto-

Computer valvetrain may hike power, mpg

By Arthur Flax
AUTOMOTIVE NEWS STAFF REPORTER

WASHINGTON — The auto industry is developing computer-controlled valvetrain systems that promise to deliver a combination of better performance, emissions control and fuel economy in a smaller engine package.

While this technology by itself may not allow automakers to comply with future rules governing fuel consumption and pollution, it could make a significant contribution by the second half of the 1990s. Development engineers predict the systems will provide a 10 percent improvement in fuel efficiency over engines now on the market and at least a 12 percent power boost.

Automakers could be testing the systems as early as next year. Yet a number of technological questions — including durability — need to be answered before mass production can take place.

Many of the systems under development do not use traditional camshafts to drive the valves but instead rely on electric, hydraulic or pneumatic actuators to control each valve individually.

Single-cylinder test bed

No bed of roses for Ford's new team

By Laura Clark
AUTOMOTIVE NEWS STAFF REPORTER

The four executives who will assume control of Ford Motor Co. on March 1 as the reconstituted office of the chief executive will face some of the toughest challenges that the company has faced since the early 1980s.

Despite its impressive market share gains and string of product home runs since 1985, Ford is grappling with huge cost overruns and delays on its new products and intense competition that has forced it to invest heavily into new technology. It also faces the challenge of successfully globalizing its automotive operations and wringing out new efficiencies.

Company insiders and industry analysts say the four members of Ford's new office of the chief executive — Harold "Red" Poling, Philip Benton, Allan Gilmour and Stanley Seneker — will be put to the test.

Poling, 64, now the company's vice chairman and chief operating officer, will take over as chairman and chief executive officer on March 1 replacing Donald Petersen, 63, who announced Nov. 10 that he will retire early.

Benton, 60, now president of the Ford automotive group, will become president and chief operating officer of Ford Motor Co. Gilmour, 55, now executive vice president of corporate staffs, will succeed Benton as head of the Ford automotive group. Seneker 58, will continue as executive vice president and chief financial officer.

Company insiders and automotive analysts say the profitability of Ford's domestic business will be under pressure the next three years. While Ford's non-U.S. automotive profits continue to soar, Ford's North American automotive operations lost $37 million in the third quarter of 1989 due to heavy

World Congress slates Bruce, Bieber, Curry, Bowler

DETROIT — William Bruce, vice president and general manager of Nissan Motor Corp. in U.S.A.'s Infiniti Division; Brian Bowler, president and chief executive officer at Porsche Cars North America; Jerry Curry, NHTSA administrator designate; and UAW President Owen Bieber will speak at the 1990 Automotive News World Congress.

Register for World Congress, Page E23

The 14th Automotive News World Congress, held in conjunction with the North American International Auto Show, will be held Sunday through Wednesday, Jan. 7-10, at the Westin Hotel in Detroit and is expected to draw industry leaders from around the world.

Bruce

Bowler

Curry

Bieber

Speakers are experts and executives from the manufacturing, supplier and dealer sectors of the automotive industry.

Bruce joined Nissan in 1982 as manager of national sales administration and manager of dealer planning and placement.

In 1983 he was named sales manager for the Norfolk region, and in 1985 he returned to California to become Los Angeles regional sales manager.

He remained in that position until January 1987, when he was appointed director of business planning. Later that year he was named general manager of Infiniti.

Prior to joining Nissan, he spent 13 years in sales and marketing with Ford Motor Co.

Bowler began his automotive career in 1967 at Volkswagen in Great Britain. After several promotions, he was named director of management services for dealer business and networking in 1972.

VW appointed him to its board of directors in 1973, and three years later he was promoted to director of sales and marketing for Audi and VW.

After a 34-year career in the U.S. Army, Curry retired in 1984 with the rank of major general. His military assignments included: commanding general of the Fifth Corps in West Germany; deputy assistant secretary of defense for public affairs; and commanding general of the U.S. Army Test and Evaluation command and White Sands missile range.

After retiring from the Army, Curry served as president of the National Perspective Institute, a public policy organization; president of the Freedom Council, a non-profit organization to encourage patriotism; and vice president of plans and programs for Systems Management American Corp.

Bieber joined the UAW in 1948 when he went to work at McInerney Spring and Wire Co. in Grand

The Freightliner/Heil Advanced Concept Truck was the center of attention at the SAE Truck and Bus Meeting and Exposition.

Concept truck is plea for higher weight rules

By Jack Keebler
AUTOMOTIVE NEWS STAFF REPORTER

CHARLOTTE, N.C. — Freightliner Corp., along with a consortium made up of Heil Co., Shell Oil Co., Rohm & Haas and Michelin Tire Co., built the perfect centerpiece for the SAE Truck and Bus Meeting and Exposition here.

The objective in creating the Freightliner/Heil Advanced Concept Truck was to create a showcase for current safety, productivity, aerodynamic, emissions and suspension technology.

Although safety and compatibility with the environment are high priorities for all truckmakers, the way that increased productivity is provided by this rolling leviathan is controversial.

The new tanker is designed to haul several tons more payload than federal standards allow. The Freightliner/Heil Advanced Concept Truck unit has a gross combination weight of 88,000 pounds. That means it can handle up to 10,200 gallons of gasoline — 1,200 gallons more than now permitted.

"The Advanced Concept Truck is a tool to persuade regulators to revise weight limits and bridge formulas to accommodate this improved vehicle concept," said Peter Wolsdorf, Freightliner senior vice president of engineering and technology.

Highway experts agree that higher axle loads increase pavement wear and especially rutting with the growing use of high-pressure tires that have a smaller contact patch.

The consortium said that despite its higher payload, the truck does less damage to highways and bridges because of three engineering tweaks:

- Lower-pressure Michelin radial tires.
- Individual axle loads are kept at or below federal limits.
- A low-rate (soft-ride) air-suspension system.

Those modifications are said to cushion dynamic-load impacts on pavement and bridge surfaces to minimize damage.

Some of the important safety features built into the truck-tractor combination include devices that enhance driver vision and electronic detection of other vehicles in what are normally big-truck blind spots.

A fiber-optic viewing device, developed by Poly Optical Products, lets the driver see the right front side of the tractor. The system's display, mounted in the cab's overhead console, shows a live picture similar to what would be provided by a videocamera.

A proximity warning system has been fitted to the tractor and the trailer. Dual infrared and ultrasonic sensors on the tractor's left and right side fairings and on the rear of the trailer detect objects within 10 feet of the truck. The driver is informed by a dash-mounted color-coded display and digital read-out alert. The small port window in the passenger's door also features a wide-angle Fresnel lens.

Improving the truck's ability to resist rollover was achieved primarily by lowering the center of gravity 11 inches and by using wider track axles — 102 inches compared with 96 inches.

The Heil tanker has structural changes that should help to make it more spill resistant. Sidewalls of the tank are 20 percent thicker than those on current production models. A special venting system prevents the release of small amounts of cargo liquid during a rollover. And deep side skirting provides additional impact protection.

Electronics play a part in providing additional safety and security. Freightliner's electronic control system monitors the anti-lock braking system, traction control, engine temperature and other vehicle systems.

Early in 1990, the Freightliner/Heil Advanced Concept Truck will undergo four months of tests on instrumented tracks to verify and analyze performance.

Mack completes T200 series

ALLENTOWN, Pa. — Mack Trucks has introduced two lightweight, heavy-duty transmissions to complete its conversion to a full line of T200 series transmission designs.

The new 13-speed T2130 and 18-speed T2180 are geared to all heavy-duty on- or off-road truck applications that require the flexibility of multiple-speed configurations.

They complement Mack's current selection of 5-, 6-, 7-, 8-, 9- and 10-speed T200 models. Both new transmissions have a "range and splitter" design. They feature an overall range of 19.59:1, with torque capacity ratings of 1,700 pounds-feet.

The 13-speed T2130 has a low gear ratio of 13.91:1 and an overgear ratio of 0.71:1, with gear steps of 18 percent in the top gears and 40 percent in the low gears.

The new 18-speed T2180 has the same low gear and overgear ratios as the T2130, with the addition of five intermediate low gears.

The average gear step through all 18 gears on the T2180 is 18 percent.

Borg-Warner settles Muncie plant strike

DETROIT — Borg-Warner has settled a strike by UAW Local 287 that lasted nearly two months at its Muncie, Ind., plant. The strike threatened the supply of manual transmissions and four-wheel-drive transfer cases for General Motors and Ford Motor Co. cars and light trucks.

Borg-Warner settled the strike Oct. 28-29 when workers voted to accept a three-year contract running through Sept. 6, 1992, which resolved the key issue of health insurance. Workers agreed to a managed health care plan that includes second and third physician opinions on major medical issues. The Muncie plant had been on

Peugeot adds features, holds most '90 models until spring

By Jim Henry
AUTOMOTIVE NEWS STAFF REPORTER

NEW YORK — Peugeot adds passive seat belts to its 1990 lineup. The cars have some other new features and a new mix of optional and standard equipment.

One new model for 1990, the 405 Sportswagon, was introduced in August. Peugeot is holding back the 1990 versions of its carryover models until spring because of an oversupply of 1989s.

INTRO 1990

The 405 Sportswagon followed last year's U.S. introduction of three 405 sedans — the basic 405-DL, the better-appointed 405-S and the sporty 405-Mi16.

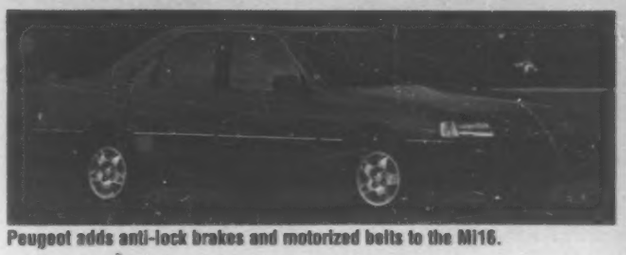
Peugeot Motors of America, based in Lyndhurst, N.J., also sells 505-series sedans and wagons, which were cosmetically freshened last year.

Peugeot is holding the line on pricing for models that are basically unchanged for 1990. Price hikes on other models range from just under 2 percent to about 6 percent.

On the 405-DL, Peugeot added a six-speaker stereo/cassette player with power antenna, motorized passive seat belts and a folding rear armrest with access to the trunk. Suggested retail price for the 405-DL is up about 6 percent, to $15,390.

The 405-S, which already had motorized seat belts, stays at $17,700.

Peugeot added anti-lock brakes and motorized belts to the Mi16. The sticker price rose about 6 percent, to $20,700.



Peugeot adds anti-lock brakes and motorized belts to the Mi16.

The 505 models get non-motorized passive belts.

The 505-S 2.2i sedan and the 505-S V-6 sedan each have a four-speed automatic transmission with lock-up torque converter for 1990. The automatic transmission had been a $650 option. The price of the 505-S V-6 sedan was hiked about 5 percent, to $21,435. The 505-S 2.2i is $19,945, about 3 percent above last year.

The 505-STX V-6 sedan, which had such standard features as anti-lock brakes and leather interior, has been dropped for 1990.

For 505 wagons, the 505-DL has risen about 6 percent, to $18,590. Increases have been held to about two percent or less on the eight-passenger 505-SW8 2.2i, $20,400; the 505 Turbo, $25,940; and the eight-passenger 505-SW8 Turbo, $26,100.

PEUGEOT FOR 1990

NEW YORK — Imported-car sales fell 7.80 percent in October, as troubles continued for European importers and as Japanese manufacturers transferred more production to U.S. plants.

European imports declined 8.69 percent for the month compared to year-ago volume. Through October, they were down 12.31 percent.

Japanese import sales fell 5.29 percent last month and 2.52 percent for 10 months.

After about 10 weeks of sales, Toyota's Lexus Division had sold 7,970 cars, passing the 10-month totals of some European makes, such as Sterling and Peugeot.

October sales declined for two of its European rivals, BMW and Mercedes Benz.

BMW sales were off 13.91 percent, while sales of the flagship 7 series dropped 26.78 percent.

Mercedes-Benz sales declined 10.45 percent last month.

Among European volume leaders, Volvo posted its second month of declining sales, down 4.74 percent, after 11 consecutive months of improving numbers.

Volkswagen sales were off 10.14 percent for the month and 6.92 percent for the year.

Meanwhile, the rise in transplant capacity continued to affect sales of Japanese imports.

Imports of cars like the Toyota Corolla and Camry declined while more were produced in the United States.

Toyota's import sales were off 28.18 percent for the month. Toyota's 10-month import sales were 17.32 percent below last year's, but the company's combined sales were ahead of last year's.

European sales climb resumes

October new-car deliveries rise 11% after September decline

By Richard Johnson
AUTOMOTIVE NEWS STAFF REPORTER

WIESBADEN, West Germany — After a decline in September, West European new-car sales rebounded last month and remain on target for another record year.

Sales in October increased 11 percent to 1,116,000, according to industry estimates compiled by Automotive News.

Volume fell 3 percent the month before.

For the first 10 months, sales were up 4.5 percent to 11,526,300. Full-year sales in 17 Western European countries totaled a record 12.96 million units in 1988.

And there are signs of continuing optimism, even though a decline is widely forecast and long overdue.

"This year, we expect the European market will be approximately 13.4 million cars," said General Motors Europe President Robert Eaton. He addressed the International Symposium on Automotive Technology and Automation.

"We also expect to see the market continue to increase around 2.5-2.7 percent per year on a trend basis," Eaton said.

Sales in Europe's four major new-car markets increased during October — France by a whopping 20.8 percent because of a reduction in car taxes in September.

Volkswagen clung to first place as group sales — including VW, Audi and Seat brands — increased 11.1 percent for the month to 171,300.

Through the first 10 months, VW held 14.9 percent of the market with group sales of 1,712,400 units.

Second-place Fiat still expects to make a run for the sales leadership VW has claimed for the past four years.

The Italian giant, including the Fiat, Alfa Romeo, Lancia and Ferrari brands, rose 4.2 percent to 159,600 in October and was up 3.4 percent to 1,677,200 through 10 months.

Ten-month sales for third-place Peugeot S.A., including the Peugeot and Citroen brands, rose 5.2 percent over 1988 to 1,474,800, a 12.8 percent market share.

Ford followed at 11.8 percent on sales of 1,355,200 cars.

General Motors continued its surge in October. For 10 months, it climbed 10.2 percent to 1,286,300, the largest gain of any carmaker in Europe in 1989.

Buoyed by the strong French market in October, sixth-place Renault's 10-month sales were up 7.8 percent to 1,178,900.

Among national markets, West Germany was back on track in October after declining in September. The United Kingdom and Italian markets remained healthy.

EAST

FROM PAGE 1

in the East two years ago — has largely subsided. At best, exports to the United States of such new products as the Soviet Union's Lada Samara and Moskvich Aleko and Czechoslovakia's Skoda Favorit are on the back burner.

But reform could create new opportunities for Western carmakers. Change is expected to stimulate economic aid from Western governments.

Besides joint-venture prospects, Western European makers could get cheap supply sources closer than the Far East and access to newly opened domestic markets integrated with Western Europe.

"Labor rates are more favorable in Eastern Europe," said Peter Cope, of Britain's Motor Industry Research Unit. "It may be a (source) at the base of the market. A number of manufacturers would like to explore this possibility. But quality problems would tend to restrict volume."

Eastern Europe also offers opportunities for suppliers, engineering consultants and designers. Bertone styled the new Skoda. British consultants International Automotive Design and Ricardo and Italy's IDEA are involved in new Soviet projects. Porsche's Weissach consultancy remains active, developing new engines for Lada and the Soviet Union's Oka minicar and probably a new Skoda engine.

As Mikhail Gorbachev singled out Soviet auto factories for structural changes, many here predict reformers in Poland, Hungary and East Germany will focus on cars.

"It would be unwise to do something simply because some interesting things have emerged in the last four weeks," said a European industry executive last week. "The situation is too unstable. And in East Germany, even the opposition parties say they don't want ventures coming in with foreign majority ownership."

And priorities are hard to gauge. Though auto exports are a main source of hard currency in the Soviet Union, Laszlo Kallay of the Institute of Industrial Economics in Budapest, said that other industries may get more attention. The reason: for better or worse Soviet auto plants still grind out cars, while other industries verge on collapse.

Still, automakers badly need attention. Isolated from global recessions, oil crises and Western competition at home, even their newest models are based on hand-me-down technology.

But Eastern countries have too few resources to modernize their industries. Ford Motor Co.'s talks with the Soviets for production of the Scorpio in Gorki collapsed earlier this year because, sources say, Ford would have had to wait several years for reimbursement of a $5 billion dollar outlay.

Automotive News has learned that talks Mercedes-Benz held with the Soviet Union about selling tooling for the 190 have also broken down for financial reasons.

Big licensing arrangements are still taking place in the East, but not all agree it is the right solution.

Kallay said the deal to produce 50,000 Suzukis under license in Hungary would hurt the local auto industry. He said Suzuki would exact high royalties with low investments and lock the Hungarians into a dependence that would preclude integration with the Western European auto industry.

With reform, new competition among Eastern European nations may grow. Some doubt whether older auto industries in the Soviet Union and Czechoslovakia can hold their advantage if political upheaval quickens economic change in East Germany, Poland and Hungary.

East Germany, which produces the most outdated passenger cars in the world, could become competitive relatively quickly with West German help, said Cope.

East Germany's auto planners are concentrating on new engines derived from a licensing agreement with Volkswagen and have no firm plans to replace the Wartburg and the plastic-bodied Trabant. The suddenness of political change could jump-start the car industry there, but few think anything will happen quickly in Eastern Europe.

"It is not a question of politics, it is a question of economics," said Jindrich Nevrla, head of passenger cars at Skoda. "Everyone sees our needs. The question is how to pay for it."

"There will be no short-term direct effect," added Kallay, who recently co-authored the Economist Intelligence Unit's exhaustive study on the subject. Significant change, he said, will require at least one investment cycle.

Still, there are already signs of the impact of political changes. The new Polish government has reversed a decision made by the previous leadership last January to build a Fiat-designed minicar at both its auto plants instead of one as originally planned.

Retreating to the original decision is viewed by many as a rational move. But the sudden shifts in Poland — including bringing Daihatsu back into the bidding process after it had been beaten out by Fiat last year — has apparently irritated both competitors.

The Soviet Union began reforming its motor industry under Gorbachev in 1985, giving individual factories profit incentives and freeing them fron central planning.

Vadim E. Spirin, deputy chief of the technology department for the Soviet Ministry of Automobile and Agricultural Machine-Building, said the Soviet Union plans to increase auto production from 1.2 million cars to 2.3 million by the mid-1990s. The increase would be achieved primarily at a new plant in Jelabuga producing the Oka.

The Soviets' priority is a plan to turn out 900,000 cars annually at Jelabuga by the mid-1990s.

But the plans are still in flux. Spirin said an engineering faction backs a separate plan to produce only 600,000 at Jelabuga and another 300,000 in another city.

Fiat is known to be negotiating a deal to supply equipment for production of 300,000 Okas annually. VW, Suzuki and Mitsubishi also have talked to the Soviets about Oka production.

The Lada plant in Togliatti already is building a few units of a two-cylinder Oka.

Spirin said plant directors now report directly to auto industry minister Nicolai Pugin, who has been portrayed by many colleagues as a dynamic leader of Soviet auto industry restructuring since taking charge under Gorbachev. But Kallay said that while men like Pugin are zealous, their efforts are offset by bureaucracy.

Spirin said suppliers with output once managed in Moscow can now make their own deals — to the detriment of final assembly plants. "Suddenly the supplier factories are dictators," he said.

Czechoslovakia has Eastern Europe's best automaking heritage. Skoda was once an important European producer.

"The Czechs are maybe the ones to watch," said Cope. "They have quality problems, but are selling reasonably well in the West. They have the greatest tradition and history, but the country still has to go through the reform process."

Skoda introduced the Favorit subcompact in Western markets early this year. It will reach an important milestone next year by increasing production of its old rear-engine S-series model. Favorit production will rise from 100,000 to 180,000 as planned, Nevrla said.

But Skoda's top managers are unhappy with a decision just imposed by central planners. Czech sources say Skoda will not license engine technology from a Western or Japanese maker for the Favorit.

Instead, Automotive News has learned, Porsche will likely assist Skoda in the development of its own engine, which Skoda insiders say will take four years. Under a licensing agreement, the engine could have been ready in two years.

But Kallay said Eastern Europe must stop importing technology and trying to sell obsolete products. He said parts manufacturers in the vertically structured Eastern European auto industries cannot easily adopt to free market conditions.

What East Germans drive

East German drivers are crossing the West German border as tourists or refugees in their domestic cars — the Wartburg, built in Eisenach, and the Trabant, built in Zwickau.

Trabants are plastic-bodied four-seaters. Power comes from a two-cylinder, two-stroke engine that develops 25 horsepower, a top speed of 62 mph and fuel economy of about 34 mpg. The Trabant has rack-and-pinion steering, drum brakes on all wheels, and comes in 2-door, convertible and station wagon versions.

Medium-sized Wartburgs are skinned in steel. They are built as a 4-door sedan seating 5 and as a station wagon for 7. A Volkswagen-supplied 1.3-liter I-4 engine develops 57 horsepower, a top speed of 84 mph and fuel economy of about 36 mpg. It has rack-and-pinion steering and front wheel disk brakes.

With a full tank of gas, Wartburg drivers have a range of 418 miles, enough to drive from West Berlin to Vienna. Trabant drivers would almost reach Cologne, after 235 miles.

EAST GERMAN MODELS FOR 1990

Model	Wheelbase (inches)	Length (inches)	Width (inches)	Height (inches)	Curb Weight (pounds)	Base engine	Drive type	Body styles
Trabant	79.5	138.2	59.3	56.7	1,354	0.6-liter I-2	fwd	2-dr., convert, sta. wag.
Wartburg	96.5	166.1	64.6	58.9	1,982	1.3-liter I-4	fwd	4-dr., sta. wag.

Suzuki, Hungary talks for car venture near completion

By Mary Ann Maskery
AUTOMOTIVE NEWS STAFF REPORTER

TOKYO — As Berliners danced on the wall, Suzuki Motor Co. President Osamu Suzuki was flying back from what appears to have been a highly successful visit to Eastern Europe.

After four years of unproductive talks to set up a joint venture for passenger-car production in Hungary, Suzuki returned with a deal that insiders say is nearly complete.

At the same time, Daihatsu and its trading partner colleagues will visit Poland around Dec. 10 to resume their automotive talks, emphasizing a movement by smaller Japanese car companies into Eastern Europe while their larger competitors establish production beachheads in Western Europe.

The Suzuki deal is by no means complete.

Peter Gador, first commercial secretary at the Hungarian Embassy in Tokyo, said no single company can be Suzuki's sole partner. The talks have involved 19 automotive and parts companies and banking and investment corporations in Hungary.

Gador also said the government, which apparently is seeking loans from international banks, will bow out once the venture is running.

"If we want a market economy, we must act accordingly," he said.

The Suzuki project would be one of the biggest Japanese investments in Eastern Europe, Gador said. Initial production volume may be fewer than 50,000 Cultus models a year.

Daihatsu's long-term efforts to set up a joint venture in Poland failed earlier but have now returned to phase one. The parties have agreed to start talking again, according to Eugeniusz Olczak, commercial attache at the Polish Embassy in Tokyo.

Daihatsu, as part of a consortium, has said repeatedly that some kind of Polish government assurance of financial backing is needed to make the operation feasible. Poland is deeply in debt, and is negotiating to restructure it.

Japan is expected to contribute $100 million to $200 million to Poland, part of $1 billion in international support that was approved at the Paris summit of industrialized nations in July, but Daihatsu said that decision has not affected its talks.

Japanese Prime Minister Toshiki Kaifu may visit Eastern Europe next year, and that could generate some progress on the issue.

When earlier talks bogged down, Poland arranged a deal with Fiat, but that was canceled, and in late September, Poland asked Daihatsu to reopen talks.

Eastern Europe, with its potential for exporting to Western Europe, has captured the attention of small companies like Suzuki, Daihatsu and Isuzu, which failed to set up a joint venture in Czechoslovakia.

Although interested, they remain cautious in their business dealings. Japanese auto exports to the region in 1988 totaled just 10,917 units. Most went to Poland by way of Finland.

But the small trade volume has not diminished the ardor of Eastern European suitors who would like to count on Japanese money.

Peter Medgyessy, deputy prime minister of Hungary, visited Japan last week, and five days after East Germany made the first break in the Berlin Wall, an East German delegation led by Gerhard Beil, minister of foreign trade, was in Japan for the biannual Japan-East Germany economic committee talks.

Although the talks are supposedly routine, a spokesman for the embassy suggested that, given the exciting developments in East Germany, there might be new proposals to promote trade this time.

LOANS

FROM PAGE 1

have equity, bankers say. That means a person will owe more than the car is worth (be "upside down") if he/she trades sooner.

To curb the upside-down trend, the Big 3 captive finance companies are confronting the banks' extended terms by providing lower interest rates on 24-, 36- and 48-month loans. Also, in the last year, General Motors Acceptance Corp. and Ford Motor Credit Co. have been heavily promoting lease programs of 48 months or less.

To stem the tide to longer terms, Ford Credit is siphoning more money into shorter-term programs and dealer training. Through May 1989, half of Ford Credit's leases were less than 48 months. Another 40 percent were 48-month leases, said Leo Larkin, marketing vice president for North American automotive financing operations.

"But they (the captives) are eating huge losses," warned Fritz Elmendorf, vice president of the Consumers Bankers Association in Arlington, Va. Bankers are not seeing the same levels of losses, he said, although it's causing them to pull in their rates.

Still, the auto finance market is so competitive, that some captive finance firms continue to provide longer terms. Chrysler Credit Corp. has offered routine 66-month financing since August 1988, in Florida and California, said J.E. Farrell, president of Chrysler Credit.

In trendsetting Florida, extended terms are the fastest way to grow, according to Joseph S. Martucci, vice president of retail financing for Citizens & Southern National Bank of Florida, Fort Lauderdale.

"Anyone who is aggressive in finance is offering longer terms," Martucci said. "The 66-month loan is more acceptable than leasing to most people."

William A. Rosevear, senior vice president of indirect lending for Chase of Florida in Tampa, said his bank first offered 66-month terms in 1987. A specialist in luxury car lending, Chase extends terms to 72 and 84 months based on a high balance and a loan amount over $15,000 for a dozen luxury cars.

Two years ago, Liberty National Bank in Louisville, Ky., began offering 72-month terms on amounts over $20,000. In the last few years, there has been more demand for luxury cars, said John H. Shipman, executive vice president.

Security Pacific Corp. in Woodland Hills, Calif., offered 84-month financing on BMWs and Porsches, but stopped in July, because cars depreciate too much in seven years. The bank offers 72-month terms on cars that retail for $20,000 or more, according to Barbara Cunlise, product manager for auto finance in Southern California.

Not all banks are handing out longer terms, said Donald W. Grigley, a senior executive vice president with Shawmut National Corp., a New England-based bank holding company.

Grigley said some banks are honing terms for two reasons: a softening in the used-car market and increasing delinquency and loan losses nationwide.

Although Shawmut still offers 66-month terms for luxury car loans in excess of $20,000, a 60-month limit is set on standard loans. Marine Midland Automotive Financial Corp. in Buffalo, N.Y., the largest bank financer of auto loans, won't go beyond 60-month loans but has had 66-month leases for luxury vehicles since June 1987, according to Robert I. Reich, president and chief executive officer.

"We've offered 66-month loans for four years," said James Link, administrative vice president of Key Bank in Albany, N.Y. Key Bank first offered 72-month luxury car financing on indirect loans less than a year ago.

Maryland National Bank in Baltimore, a top vehicle leasing bank, is offering an extended 64-month lease as a promotion on 1990 models until the end of the year.

Competition also prompted Indiana National Bank in Indianapolis to lengthen indirect auto loan terms to 66 months in 1988. But Craig Robinson, vice president and sales manager for installment lending, said he hopes it's not a long-term trend.

"Terms are getting longer," said Jack Blake, director of information at the Credit Union National Association in Madison, Wis. "The critical factor is keeping payments within a customer's budget." The first survey of new-car loans found the average credit union loan in 1988 was 52.9 months.

For luxury car buyers, longer-term loans and leases are more prevalent because of heftier prices, corporate tax benefits and residual values that are higher than on non-luxury vehicles.

"Though we have had leases up to 84 months available, since last year, a very small percentage of our customers use them," said Johan Bayer, marketing services manager at Volvo Finance of North America. In the Dallas area, 72-month leases have been attractive this year. Leasing is up 43 percent over 1988 because of special incentives, he said.

Honda has been experimenting with special financing. Earlier this year, Honda's upscale Acura Division tried a national 90-day test leasing program with Chase Manhattan Bank that featured a 66-month lease on a Legend to reduce the monthly payment.

The extended terms helped Saab-Scania Financial write 12 percent more loans over 60 months, according to Robert Kosky, national fleet and leasing manager. Leases over 60 months are up 9 percent from last year, while shorter-term financing has declined slightly, Kosky said.

Effects of longer loans

SALES

FROM PAGE 1

according to a Commerce Department formula.

U.S.-built car and truck sales plummeted 20.22 percent below the year-ago period in early November.

Dealers said that traffic has declined dramatically and there is no sense of urgency to buy a car or truck.

Auto production reflects that. Currently, fourth-quarter U.S. auto production schedules are nearly 13 percent below those of 1988. So far this quarter, nine car assembly plants have been idled — some more than once — due to sluggish sales and bloated inventories. Seven were GM plants. Also, nine truck assembly plants have been shut down. Four were GM plants.

In the first 10 days of November, the annual selling rate for domestic cars averaged a grim 5.6 million units, according to a U.S. Commerce Department formula.

In early November, 235,750 cars and light trucks were sold, down 59,747 units from last year's 295,497 units.

Each of the Big 3 reported losses. GM's combined car and light-truck sales slumped 26.27 percent. Ford Motor Co. delivered 19.94 percent fewer vehicles, and Chrysler Motors' domestic car and truck sales dropped 16.56 percent from last year's period.

Two of the transplants reported car sales gains and two had losses. Toyota sold four times as many U.S.-built cars as in the year ago period, when the Georgetown, Ky., plant had just come on line.

Nissan again reported a 22.17 percent improvement in sales of U.S.-built Sentras.

Domestic Accord sales declined dramatically for Honda in early November due to a shortage of 1990 model Accords and increased competition. The Japanese carmaker sold 30.54 percent fewer U.S.-built Accords and Civics in the period.

Mexico to supply truck engine for Smyrna

By Lindsay Chappell
AUTOMOTIVE NEWS STAFF REPORTER

SMYRNA, Tenn. — Nissan Motor Manufacturing Corp. U.S.A. will begin importing Mexican-made engines in February for the light pickup trucks it builds at its plant here.

Plans call for imports of 5,000 to 6,000 engines a month initially and 100,000 units annually in the early 1990s. The engines will come from Nissan's plant in Aguascalientes, Mexico, and will replace units currently imported from Japan.

The move will initially account for more than a fourth of the Mexican plant's annual capacity of 240,000 engines.

"Nissan certainly wants to try to utilize that plant capacity, since we have a large investment standing there in building and machinery," said Rick Sommer, vice president of manufacturing for Nissan Motor Manufacturing. "There are some real cost advantages to us working closely with Mexico, both in transportation savings and in putting that investment to greater use."

Engine production facilities mushroomed in Mexico in the early 1980s as carmakers added capacity to serve a booming, oil-rich Mexican car market. But when world oil prices collapsed, Mexican auto sales floundered and demand for engine production fell.

As of last year, Mexican engine plants controlled by Nissan, the Big 3, Volkswagen and Renault had a combined capacity of almost 2.5 million units annually, but estimated plant utilization was below 75 percent.

Last year, the Nissan Mexicana operation geared up to produce the new 2.4-liter KA-series engine for the Smyrna-built pickups, replacing Z-24 truck engines. The new KA engine, with three valves per cylinder instead of two, is also used in Nissan's Stanza and 240SX models.

For a short time last year, the Smyrna plant also used Mexican engines in its Sentra subcompact. But when the decision was made to redesign that engine for the 1990 model year, Nissan Mexicana opted to switch to the KA-model engine.

The move could provide the Mexican operations with a double payoff when, in 1992, Smyrna will begin producing the replacement for the Stanza. Company officials have declined to say what engine that new vehicle will use.

Sommer also said that the Tennessee plant has reached capacity production on its own new engine assembly line, which began in June. Smyrna is now producing 4-cylinder, 12-valve Sentra engines at the rate of 500 a day.

He added that the company is considering its next move on engine production at the facility, which could involve assembling additional engine models or adding component machining.

Toyota Motor Manufacturing USA will open a $300 million engine plant in Georgetown, Ky., next month. Honda of America manufactures engines in Marysville, Ohio. Mitsubishi and Chrysler have acknowledged their interest in building an engine plant to serve Diamond-Star Motors in Normal, Ill. And Fuji Heavy Industries is studying the feasibility of an engine plant to serve Subaru-Isuzu Automotive in Lafayette, Ind.

"We're aware of what everybody else is doing, but it doesn't make sense for us to invest in an expanded engine plant right now," Sommer said. "We have a lot going on here now with our expansion."

Nissan announced earlier this year that it will spend $450 million to add a third vehicle at Smyrna, boosting plant capacity from 220,000 to 440,000 cars and pickups a year by 1992.

OBITUARIES

Raymond M. McCarthy

BLOOMFIELD HILLS, Mich. — Raymond M. McCarthy, 62, president of General Motors Acceptance Corp., died here Nov. 13. He worked for GMAC for 40 years and was named president in 1985.

Glenn E. Tarr

PONTIAC, Mich. — Glenn E. Tarr, 53, Chevrolet assistant manager of marketing information and research, and his wife, Wanda, were abducted and murdered Nov. 9. Their bodies were found in a Pontiac park. Mr. Tarr had been with Chevrolet's marketing organization since 1964.

Yoshiaki Saegusa

WASHINGTON — Yoshiaki Saegusa, 50, a former vice president of Nissan Motor Corp. in U.S.A. and director of the company's office here from 1984 to 1988, died in Tokyo Oct. 31. He was secretary-treasurer and a director of the Automobile Importers of America. He returned to Japan in 1988 as a general manager in Nissan Motor Corp.'s corporate planning office.

PRODUCTION

Truck output falls below 1988 total

By Kathy Boyer
AUTOMOTIVE NEWS STAFF REPORTER

Year-to-date truck output slipped below 1988's total last week for the first time since early January.

Plant closings due to slow sales have caused this year's truck build to fall 0.03 percent behind last year's. The 1989 total is 3,702,619.

With two plants and one line idle, scheduled truck assembly dipped to 76,949 last week. The total was 3.24 percent below the prior week and 17.07 percent below the year-ago week.

Despite two idle plants and the closing of one car line, last week's scheduled domestic auto output increased over the previous week's build.

Automakers targeted 136,606 cars, 1.58 percent more than the prior week but 16.32 percent below the year-ago week.

Slow sales continue to hold down weekly auto production.

Estimated output last week was shared as follows:

General Motors, 43.27 percent; Ford Motor Co., 24.51 percent; Chrysler Motors, 12.74 percent; Honda of America Manufacturing, 5.42 percent; Mazda Motor Manufacturing (U.S.A.) Corp., 3.28 percent; Toyota Motor Manufacturing U.S.A., 3.02 percent; Diamond-Star Motors, 2.84 percent; New United Motor Manufacturing Inc., 2.78 percent; Nissan Motor Manufacturing Corp. U.S.A., 1.74 percent; and Subaru-Isuzu Automotive, 0.40 percent.

GM's Flint, Mich., and Pontiac, Mich., truck plants along with its Reatta Craft Centre in Lansing, Mich., were closed last week due to high inventory. The plants are expected to reopen today.

The company's Wentzville, Mo., and Doraville, Ga., car plants are down this week; they are slated to reopen Nov. 27.

GM extended downtime for its Grand Am line at the Lansing, Mich., plant. The line is expected to resume operations today.

Chrysler's St. Louis car plant and the Grand Wagoneer line at its Toledo, Ohio, plant were at a standstill last week due to poor sales.

Both are expected to resume output today.

Trucks up; cars dip in Canada

Canadian auto production was targeted at 21,746, last week, 17.78 percent below the prior week but 22.60 percent more than the year-ago week.

So far this year, 891,660 cars have been built, 4.96 percent below last year's assembly at this point.

Truckmakers scheduled output of 19,220 units last week, 20.59 percent above the prior week but 12.03 percent below the year-ago week.

Year-to-date, 844,396 trucks have been built, 1.74 percent more than last year's output at this time.

Chrysler Motors closed its Bramalea, Ontario, plant last week because of sluggish sales.

WHO SAYS THERE'S NO PLACE LIKE HOME?
WE BUILT THE MAZDA MPV BASED ON A VERY STRONG FOUNDATION. THE HOME.
YOU KNOW HOW YOUR HOME FEELS. EVERYTHING HAS ITS PLACE. A PERFECT FIT, SO IT ALL FEELS JUST RIGHT.
THAT'S THE FEELING YOU'LL GET IN AN MPV, THANKS TO SOMETHING WE CALL "KANSEI ENGINEERING." IT'S ENGINEERING BASED ON HUMAN FEELINGS, AND IT MAKES THE MAZDA MPV ALSO FEEL JUST RIGHT. IT'S A FEELING YOU'LL NOTICE INSTANTLY THE MOMENT YOU STEP INSIDE.
YOU'LL ALSO FEEL THE POWER OF AN OPTIONAL 3.0-LITRE FUEL-INJECTED V6, PLUS THE CONTROL OF OUR REAR-WHEEL ANTI-LOCK BRAKE SYSTEM. THERE IS EVEN A 4WD MODEL, SO YOU CAN FEEL AT HOME IN THE COUNTRY. OR IN THE SNOW. AND TO ADD TO THE FEELING OF SECURITY, THE MPV IS BACKED WITH THE MAZDA 36-MONTH/ 50,000-MILE WARRANTY, THE BEST IN ITS CLASS.
COME TEST-DRIVE THE MAZDA MPV. IT'S GUARANTEED TO MAKE YOU FEEL RIGHT AT HOME. FOR MORE INFORMATION, CALL THIS TOLL-FREE NUMBER: 800-424-0202.

IT JUST FEELS RIGHT.

Mazda wanted an upscale image; research showed that people buy emotionally; so, "It just feels right."

Japanese bullish on U.S. expansion

'Transplants are murdering' Big 3

By Lindsay Chappell
AUTOMOTIVE NEWS STAFF REPORTER

The Japanese industry is moving aggressively ahead on U.S. turf, and analysts are warning louder than ever that the early 1990s do not look good for the Big 3.

This week in East Liberty, Ohio, Honda Motor Co. will open its third North American car plant, a $450 million facility that can provide another 150,000 U.S.-made vehicles a year.

The new plant brings Honda's total North American production capacity to 590,000 annually. The company has a facility 15 miles away in Marysville, Ohio, that yields up to 360,000 Accords a year, and it produces three-door Civic hatchbacks in Alliston, Ontario, at the rate of 80,000 a year.

For Honda, East Liberty is one more step in a 10-year-old strategy of expanding U.S. production for bigger U.S. sales. For the domestic industry at large, the new plant means more U.S. auto plant capacity, more competition and more evidence that the transplants are a force to be reckoned with.

"The transplants are murdering all of us — all of the Big 3," Chrysler Corp. Chairman Lee Iacocca told reporters in Washington last week. He warned that new plant closings were ahead.

Japanese makers, meanwhile, enter the 1990s looking forward to further expansion in the United States.

Next month in Georgetown, Ky., Toyota Motor Manufacturing Corp. launches its $300 million powertrain plant, a facility that will cast, machine and assemble most of the components for about 300,000 engines a year.

At the same time, Nissan Motor Co. is pushing ahead with a $490 million project to double capacity at its Smyrna, Tenn., car plant to 440,000 vehicles annually. The company also confirmed last week that it will spend about $200 million to double vehicle capacity at its Mexico auto plant.

Last month Subaru-Isuzu Automotive Inc. said it had accelerated by two years its plan to double capacity at a newly opened plant in Lafayette, Ind. And Mitsubishi Motors now confirms that it is pursuing a plan to build engines at its joint-venture car plant with Chrysler in Normal, Ill.

NEW SLANT: *Makers alter advertising approach to meet demands of a tough market*

By Arlena Sawyers
AUTOMOTIVE NEWS STAFF REPORTER

A soft, highly competitive market has forced some carmakers to enter the next decade with revised advertising campaigns and strategies.

Catchy slogans coupled with fast cars, pretty women and upbeat music is still the way most manufacturers showcase their products. But slumping sales and sagging profits have caused some domestic makers and importers to veer from the tried-and-true to less traditional advertising and marketing stances.

Shots of cars going off cliffs, the use of movie screens and video cassettes and commercials created to appeal solely to customers' emotions are among the ways manufacturers are trying to upstage the competition.

Nowhere is the change more dramatic than at Chrysler Motors.

Customer comes first in Infiniti training

By Jesse Snyder
AUTOMOTIVE NEWS STAFF REPORTER

SCOTTSDALE, Ariz. — At 163 mph, the big Infiniti sedan has crept past the highest number on the speedometer.

Former Indy-car Rookie of the Year Dennis Firestone is having fun, swinging the sedan from high to low through the 40-degree banked corner; two helmeted dealer employees are grinning and holding tight in the back seat.

All in the cause of customer satisfaction.

Minutes earlier, 28 dealer service and parts managers and technicians had driven M30 coupes and Q45 sedans for laps on the closed track at speeds up to 130 mph. For some, it was the fastest they had ever driven, producing anxiety before and exhilaration afterward.

Jimmy Holt, parts manager at Crown Infiniti in Birmingham, Ala., has done some short track and street racing.

"I was just accelerating the M30 out of the pits and concentrating on setting myself up on the banked turn," Holt said later. "I was about to comment on how smooth the car was handling when my instructor said, 'You know the (M30) speed limit is 115.' I looked down and I was over 130 and still on the gas."

Dinner conversation that night was dominated by studiously understated comments about how fast the new Infiniti models were, and about how competitive Mercedes, BMW, Jaguar, Lexus and Acura models had compared in side-by-side slalom, acceleration, handling and braking tests.

The full day at Nissan's Advanced Testing Center in Mariposa, Ariz., is an important part of Infiniti Division's extensive eight-day training program for virtually all dealer personnel, said Ed Bradley, national sales operations manager.

"We want them to have the personal experience of not only knowing what our cars are capable of, but also understanding what they are competing against," he said. "After a day out here, they can speak enthusiastically and knowledgeably about our cars.

"In fact, when the sales consultants are out here, most have their

Olds ends cash rebates, improves dealer incentives

By Arlena Sawyers
AUTOMOTIVE NEWS STAFF REPORTER

In what is viewed as a small victory for dealers, Oldsmobile abolished its customer cash rebates — with the exception of a first-time buyer program — and directed all incentive cash to dealers.

Pontiac has customer cash rebates on 1990 models but dropped the buyer rebates on 1989s. It has dealer rebates on both 1989 and 1990 models.

Oldsmobile's "New Generation — Sell-A-Bration" program went into effect Thanksgiving Day.

The idea behind the new strategy, said David E. Lahti, Oldsmobile general sales and service manager, is to allow "dealers to tailor their customer incentives to their respective market" and to make the program simpler.

"There has been a lot of confusion in the market with the variety of incentives that are available to the customer, and we believe this new program will be simpler and easier for the dealer and the customer," Lahti said in a prepared statement.

Ron B. Tonkin, president of the National Automobile Dealers Association, applauded the change in marketing strategy at Oldsmobile but said that it doesn't go far enough. He said the next step is for General Motors to take the program corporate-wide and to reduce the price of its products.

"It's a slow start, but a positive start," said Tonkin, who operates 10 dealerships and 17 franchises in Portland, Ore. "Consumers vote with their cash, and they are voting

Big 3 intensify export sales efforts in Europe

By Richard Johnson
AUTOMOTIVE NEWS STAFF REPORTER

FRANKFURT, West Germany — Ford Motor Co. and General Motors are increasing their efforts to boost exports of North American-built vehicles to Europe.

Ford has decided to begin sales next year in the 2.6-million-car West German market — Europe's largest and most competitive — and GM has begun a major dealer recruitment effort to go with a big advertising push.

Chrysler Motors, which re-entered the European market last year, plans to export 50,000 vehicles to Europe in 1989.

GM expects sales to jump 80 percent next year, from 15,000 in 1989 to 27,000. The breakdown includes an estimated 5,000 units each in Germany, Switzerland and Sweden; 3,000 in Finland; and the remainder through smaller national markets.

The increase is expected to result primarily from expansion of the dealer network. GM international export sales now has 125 dealers in Europe outside France and Italy. In those two countries, GM's national sales organizations handle sales of North American-built vehicles.

Gary Meteer, executive director of General Motors North American Vehicles-Europe, said he expects to be nearing 200 dealers by the end of 1990 and 350 by 1992.

"We have a concerted effort now to sign up dealers," he said. About 20 have been added during the last three months. About 80 percent of the dealer organization will consist of current Opel dealers.

GM also has started a major advertising offensive in Europe — backed by an estimated one-year budget of $20 million — to improve the image of U.S. cars and demonstrate GM's seriousness about returning to the European market.

"There is very little resistance from a purely nationalistic point of view, or at least not as much as in the past," Meteer said. "For some people, buying American is a kind of a goal."

GM offers Chevrolet Corsica and Beretta — the top sellers — Caprice and Corvette; Pontiac Grand Prix, Bonneville and Firebird; Buick Park Avenue; and most Cadillac models.

GM also offers the Chevrolet S-10 Blazer, Astro van and G-body van, which is a big seller in Sweden because light commercial vehicles escape the country's heavy tax on passenger cars. The latest entry, along with the four-door Grand Prix, is the Pontiac Trans Sport minivan, which will not arrive in significant volume until late this year.

Meteer said another reason for the expected increase in volume next year is the addition of several

Chrysler praised, Honda rapped on air-bag use

By Diana T. Kuryiko
AUTOMOTIVE NEWS STAFF REPORTER

WASHINGTON — Chrysler Motors may be the country's No. 3 automaker, but it's tops in the books of the industry's safety watchdogs.

Chrysler was lauded last week by three consumer groups that rated carmakers on their current and future plans to use air bags.

The company is putting air bags in 92 percent of its 1990 vehicles, including the low-priced Dodge Omni and Plymouth Horizon.

American Honda, the fourth-largest car retailer in the United States, was called the "biggest disappointment" and chastised for having air bags on only its most expensive car, the Acura Legend.

The survey of the 12 biggest-volume makers was a group effort by two powerful Ralph Nader-founded groups, the Center for Auto Safety and Public Citizen, and a smaller organization, Motors Voters.

The rankings were based on a weighted average of factors, including the number of 1990 models with air bags as standard equipment, future air-bag plans, occupant protection features in all seating positions in cars and vans, information provided to dealers and the contents of company ads.

Honda, which disputed the ranking, was among the five Asian auto companies that received failing grades.

It was joined at the bottom of the scorecard by Nissan Motor Corp. in U.S.A., Mazda Motor of America, Hyundai Motor America and Subaru of America.

Honda was singled out, not only because of its size, but because it had no promotion campaign for air bags and its dealers misinformed consumers, said Clarence Ditlow, executive director of the Center for Auto Safety.

But he said, "Chrysler's accomplishment is all the more remarkable since it came from being one of the staunchest opponents of air bags to leapfrogging the original leaders, Ford and Mercedes."

Mercedes-Benz of North America came in second, earning points for being the first to sell air bags, for offering passenger-side air bags in 13 of its 14 models and because it was one of only two auto companies surveyed to include air bags in all its cars.

see AIR BAG, page 56

No hard sell on air bags in D.C. area

As part of their survey, consumer activists posed as shoppers and visited 27 dealers in Virginia, Maryland and Washington this month.

They asked a variety of questions about air bags and their availability. Some answers indicate that customers might be advised to do some homework on the subject before visiting the showroom.

Here is a sampling of responses:

- A Chrysler retailer in Virginia encourages air bags, says they're great and believes they're standard in every Chrysler product (they aren't).
- A Maryland Oldsmobile dealer said "they aren't worth the extra cost." Olds offers them as options on its 88 and 98 models, and they are standard on the Toronado.
- "Only drivers that are 16- or 17-years-old need them, but not 'mature' drivers," said a salesperson at a Virginia Hyundai store. "Inadvertent deployments have caused accidents. They don't always work as designed. You can only get them in Chryslers and high-quality cars."
- "You don't need them because the car has (a) 'safety capsule' and the engine will drop down in a crash," said a Volkswagen dealer in Virginia.
- "Air bags are not necessary; the seat belt is all you need," said a saleswoman at a Virginia Mazda dealership. She said she didn't know how air bags work but knew they were standard in the Miata.

Losh

Benefield

World Congress to hear Losh and Benefield

J. Michael Losh, general manager of Oldsmobile, and Jerry L. Benefield, president of Nissan Motor Manufacturing Corp. U.S.A., will speak at the Tuesday morning session of the 1990 Automotive News World Congress.

The 14th World Congress, held in conjunction with the North American International Auto Show, will be held Sunday through Wednesday, Jan. 7-10, at the Westin Hotel in Detroit and is expected to draw industry leaders from around the world.

Benefield began his automotive career in 1962 with Ford Motor Co. His last position with Ford was manager of the Dearborn, Mich., assembly plant.

Benefield joined Nissan in 1980 as vice president of manufacturing and was promoted to president and chief executive officer in 1988.

Register for World Congress Page 19

Losh joined General Motors in 1970 as a staff assistant at Inland Division. In 1972, he was transferred to GM's New York office as senior staff assistant of the treasurer's office. Two years later he was promoted to director of profit analysis and forecasts.

He has served as director of product programs in Detroit, director of finance at GM Brazil and president and managing director of GM Mexico.

Losh spent five years as general manager of Pontiac before joining Oldsmobile last June.

Saturn dealers drive and approve their car

By Michelle Krebs
AUTOMOTIVE NEWS STAFF REPORTER

Saturn dealers, after test-driving the cars they will begin selling next fall, predicted their vehicles will sell well against Japanese imports.

Some 57 Saturn dealerships were represented recently at General Motors' proving grounds in Arizona where dealers test drove Saturn developmental cars for three days. For comparison, they also drove imports that will compete directly with Saturn, including models from Toyota, Honda, Acura and Mitsubishi.

"I was very impressed," said Louis Fusz Jr., a Saturn dealer for the St. Louis area. "They have created a drivetrain that is very competitive. The suspension system is competitive. The longer wheelbase on the Saturn gives it a better ride than the competition. And it's good looking."

Fusz said the Saturn cars outperformed import models during the test drive. "They did as well or better than the high-priced imports," he said.

He predicted the Saturn models will do well in the marketplace, too. Fusz sells Chevrolet, Pontiac, Dodge, Mazda, Subaru, Toyota, Nissan, Suzuki, Isuzu, Rolls-Royce and Bentley.

Joseph "Rick" Hendrick, a Saturn dealer for the Charlotte and Raleigh-Fayetteville, N.C., areas, also was impressed.

Hendrick, a former race car driver and owner of three Winston Cup race car teams, was one of five dealers on the Saturn steering committee. He said he was concerned from the start that the Saturn engine, transmission and suspension had to match the Japanese competition.

"I was very vocal that Saturn really needed to make sure the car performed as well," said Hendrick. He said the Saturn performed better than the imports, some of

Van converters join automakers in use of CSI data

By Joseph Bohn
AUTOMOTIVE NEWS STAFF REPORTER

The advent of new consumer satisfaction indices, similar to those used by automakers, is bringing a new level of sophistication to van converters.

Glaval Inc. of Elkhart, Ind., is using J.D. Power for consumer research. Glaval incorporated feedback from its first survey into its 1990 products.

A number of other converters are using Service Marketing Unlimited of Fort Worth, Texas.

They include: Mark III Industries of Ocala, Fla.; Starcraft Corp. of Goshen, Ind.; Coachmen Vans of Elkhart, Ind.; U.S. Conversions of Elkhart, Ind.; Good Times Van of Bentley, Texas; Aztec Custom Vans of Elkhart, Ind.; and Royal Vans of Texas, Round Rock, Texas.

Jake Cash, chairman of Service Marketing, said repeat buyers are becoming an increasingly bigger factor in van conversion sales, and his firm is working with converters to develop programs to attract them.

Almost 26 percent of new-van customers are people buying their second, third or fourth such vehicle, and the number is growing steadily, Cash said.

Yet, only 10 percent of those customers are buying the same brand they previously owned.

"With repeat buyers being such a high factor in the market, we need research to help converters retain their customers," Cash said.

"In the final analysis, customer retention will help determine the ultimate success of a converter."

The company has been surveying van buyers for its converter customers within a month or two after the sale and again at nine months to determine their initial reasons for buying the vehicle and contentment with its quality.

It rates individual converters against an industry average, but releases its findings to them on a confidential, individual basis.

Still, the converters are free to use the findings as a sales tool in their dealer recruiting and/or marketing efforts and also to correct any weaknesses in their products or services.

Meanwhile, Glaval "wanted our conversion van owners to really tell us what they liked and didn't like about our product," said William T. Becker, vice president of marketing, advertising and consumer relations.

The company produces Gladiator conversions on Chevrolet chassis, Universal conversions on Ford chassis and Auto Form conversions on GMC chassis.

"We've made some improvements on this year's models and strengthened and expanded customer service after the sale, based on responses to our survey," Becker said.

Ken Chotiner, J.D. Power coordinator on the Glaval project, said Glaval generated a 35 percent response rate from customers, about 10 percentage points higher than the norm on CSI studies.

The company got good scores on components that it manufactured, such as seating/fabric, woodwork and fiberglass.

The survey found that 87 percent of owners said they would buy another Glaval conversion.

The company made changes in some areas in which the survey showed it was weak.

It completely changed the wiring system on its 1990 models.

The system now includes automotive-type connectors, a simplified routing matrix, wiring covered by convoluted plastic conduits and a backup system.

The company also redesigned its seats to be more user-friendly, while adjusting the location of mechanisms for slide and recline.

It also increased the storage capacity of its vans by adding more pockets and separate storage areas in the overhead consoles and under the rear seats.

It relocated the TV sets in its vehicles to improve the viewing angle for passengers and eliminate the potential for passengers to bump their heads when getting in and out of the vehicle.

To improve service after the sale, Glaval is including a detailed, easy-to-understand owner's manual with its 1990 models.

It also computerized its warranty information to address customer requests and is providing more information for dealers to help them understand its products.

It enlarged its inventory of replacement parts to speed up shipments to dealers.

Becker said Glaval's relationship with J.D. Power is still in its infancy and that Glaval intends to continue using the research firm to monitor its CSI.

RV sales fall; fewer vans sent to converters

RV wholesale shipments to dealers totaled 28,700 in September, down 12.23 percent from a year earlier.

Shipments for the first nine months of 1989 are off 5.75 percent to 309,600 from 1988's pace, according to the Recreation Vehicle Industry Association.

Total RV wholesale shipments during the 1980s exceed 3.3 million units and may top 3.4 million, depending on fourth-quarter industry results, RVIA said.

Van conversion shipments, though off in September, continue to bolster the industry's nine-month total.

Converters shipped 14,200 vans to dealers in September, 7.79 percent fewer than last year.

Van conversion shipments totaling 154,800 for the first nine months of the year, slightly ahead of 153,300 a year earlier.

Raw chassis shipped by Detroit van manufacturers to converters indicated a slowdown of activity for October and November.

General Motors, Ford Motor Co. and Chrysler Motors shipped 23,100 vans to converters in September, 40.31 percent fewer than a year earlier.

The slowdown was sharper for compact than for full-sized vans.

Detroit manufacturers shipped 4,200 compact chassis to converters, 46.84 percent fewer than last year. They shipped 18,900 full-sized chassis, 38.64 percent fewer than a year ago.

For nine months of calendar 1989, Detroit manufacturers shipped 154,200 chassis to converters, down 9.56 percent from a year ago. Of them, 120,900 were full-sized chassis (down 8.69 percent) and 33,300 were compact chassis (down 12.60 percent).

Quigley produces right-hand-drive vans

By Joseph Bohn
AUTOMOTIVE NEWS STAFF REPORTER

Quigley Motor Co. of Manchester, Pa., a four-wheel-drive van converter, has begun producing right-hand-drive versions of its vans for export to Australia and Europe.

The company produced its first unit for Australia, and a major British importer is interested in 100 to 200 similar units for the British Isles during the next two model years.

Bill Quigley, company president, declined to identify the importer.

He said the importer was primarily interested in General Motors chassis-based models and some Ford Econoline-based units.

Quigley said his wholesale price for such conversions purchased as a package is $11,250.

That includes $5,250 for the 4wd conversion and $6,000 for the right-hand-drive conversion. The prices are in addition to the cost of the chassis.

Quigley said that if right-hand drive were ordered without 4wd, the cost would be over $6,000.

Quadra-Version, Quigley's 4wd conversion system, is available on all full-sized vans, GM compact vans and Ford Super Duty trucks.

Quigley built its 4wd/right-hand-drive model on a full-sized GM van. It also moved the cargo doors from the right to the left side for safety and convenience.

The total right-hand-drive conversion process required many changes to driver controls in order to produce a functional mirror image of the original vehicle, Quigley said. Even the side-view mirrors had to be switched and rotated 180 degrees to retain their separate functions.

Through the use of specially fabricated plate, the van's firewall was modified extensively to allow for movement of the steering column/shifter assembly, the master cylinder/power brake unit and the accelerator and brake pedals to the right side of the vehicle.

The hood was altered to provide clearance for the relocated master cylinder/power brake assembly.

Another plate was fabricated for the left side of the firewall to provide a new mounting location for the front heater/air conditioner that had originally been mounted on the right.

To make that reversal, the heater/air conditioner box was split and modified, leaving the fan and blower housing in its original position.

The rest of the box, including the heater core and air conditioner, was moved to the left side of the van.

Through the use of specially designed mounting bracketry, the steering gear was installed on the opposite side of the vehicle's frame.

RV BRIEFS

GM, RVIA agree

RESTON, Va. — The Recreation Vehicle Industry Association and General Motors announced agreement on a plan that will attempt to allow van converters to maintain seat assembly design flexibility while still conforming to the requirements of safety standard 208.

Standard 208, which becomes effective in September 1991, will require dynamic testing of seats, seat belts and all related components on light trucks, vans and multi-purpose vehicles with gross vehicle weights of 8,500 pounds or less and unloaded weights of 5,500 pounds or less.

RVIA officials were concerned that interpretation of standard 208 by automakers might pose a threat to the seating flexibility that is vital to van converters.

Its Federal Motor Vehicle Safety Standard Task Force welcomed a GM proposal to create a series of projected best case/worst case seat assembly designs and specifications, including seats, pedestals and belt assemblies, for prototypes to be built by van seating manufacturers.

Chrysler plans to do its own testing of van seating and will provide the association with testing information. Its long-term goal is to continue to supply converters with the seat-delete option and to provide sufficient data to seating suppliers, RVIA said.

Ford plans to establish a Qualified Vehicle Modifiers program that will set minimum standards that van converters must meet to continue receiving Ford chassis. It will probably give converters a choice of ordering an RV prep package that includes the basic seat or a standard seat-delete package like that currently offered, RVIA said.

Compliment change

COMANCHE, Iowa — Three former employees of Compliment Vans, who purchased all its assets from Neoax Inc., have changed its name to Compliment Conversions. The new owners are David D. Dulany, president; Daniel McChane, vice president in charge of sales; and Rich Nelson, vice president in charge of production.

The new owners plan to increase production and employment at the plant and will introduce several new products in mid-December.

Compliment has produced some 28,000 conversions. It markets them in every state and also exports them.

Wetherby diversifies

FORT WORTH, Texas — Wetherby Enterprises, which produces various pickup, van and sport-utility conversions, has contracted to produce a line of treatment monitoring vans for Western Petroleum Services International.

Under its agreement, Wetherby is producing six vans, called TMVs, for Western. The latter will sell them in China.

The TMVs are being assembled at Wetherby's Mansfield, Texas, plant, according to Phil Wetherby, company chairman.

3-day week cuts build to 81,663 cars

By Kathy Boyer
AUTOMOTIVE NEWS STAFF REPORTER

With two car plants closed and a short work week due to the Thanksgiving holiday, last week's scheduled output nose-dived from the prior week's build.

Automakers targeted production of 81,663 units last week, 39.00 percent below the previous week and 8.91 percent below the year-ago week, which also was a holiday week.

So far this year, 6,284,573 cars have been assembled, 2.36 percent below last year's total at this point.

Last week's estimated production was split as follows: General Motors, 42.82 percent; Ford Motor Co., 26.10 percent; Chrysler Motors, 12.31 percent; Honda of America Manufacturing, 5.20 percent; Mazda Motor Manufacturing (U.S.A.) Corp., 3.26 percent; Toyota Motor Manufacturing U.S.A., 3.03 percent; New United Motor Manufacturing Inc., 2.69 percent; Diamond-Star Motors, 2.51 percent; Nissan Motor Manufacturing Corp. U.S.A., 1.68 percent; and Subaru-Isuzu Automotive, 0.40 percent.

Last week's scheduled truck build of 51,437 units fell 32.79 percent from the previous week and slipped 0.50 percent from the year-ago week.

Year-to-date, 3,573,641 trucks have been assembled, 0.05 percent below last year's output at this time.

GM continues to extend downtime at its plants. The Doraville, Ga., plant was scheduled to resume operations last week but remained idle and will also be down this week along with the Fairfax, Kan., facility.

Both are closed because of slow sales. No dates have been set for the plants to reopen.

GM's Wentzville, Mo., car and Janesville, Wis., truck plants were idle last week due to sluggish sales. The plants are expected to resume assembly today.

Chrysler's St. Louis car plant and its Grand Wagoneer line at the Toledo, Ohio, plant resumed operations last week after being idle to adjust inventories.

All plants were idle last Thursday and Friday due to the holiday.

Canada cars slip on GM cutback

Canadian car assembly dipped last week from the prior week as General Motors halted production of its Buick Regal and cut back on Chevrolet Lumina output.

Scheduled output of 18,667 fell 20.84 percent from the previous week but rose 5.40 percent over the year-ago week, when one plant was closed for model changeover and one for inventory adjustment.

Truck production was estimated at 19,290 units last week, 1.01 percent below the prior week and 7.88 percent below the year-ago week.

GM laid off 4,000 Buick Regal assemblers at its Oshawa, Ontario (No. 2), plant last week in response to sluggish sales.

No date was set for production to resume.

Technology teasers for 2000

U-M's Delphi V panel tries to predict inroads in coming decade

For American car technology over the next 10 years, future shock may turn out to be more a gentle buzz. At least, that's how the 330-member panel of Delphi V sees it.

In a way that's not too surprising. After all, the industry has just gone through a revolution, and after all revolutions comes a period of consolidating gains. And the Delphi panel members, the collective opinions which make up the University of Michigan technology forecast, expect the next decade to be just such a period. The American automobile will continue to change, they say, but the rate of change will be more evolutionary than revolutionary.

The mainstream American car of 2000, they predict, will be a front-engine, front-drive, steel unibody, gasoline-powered, ABS-equipped sedan, slightly larger but also slightly lighter than its 1990 counterpart.

Under that familiar skin there will be substantial changes — including more sophisticated suspensions, the use of now-exotic materials like ceramics and higher electronic content. But even in these areas the rate of change will be considerably slower than in the decade now ending, and, interestingly, quite a bit slower than was anticipated by panels in previous Delphi studies, which contemplated much more radical change by the end of the century.

That's likely because each of the Delphi studies (Delphi I in 1979, II in 1981, III in 1984 and IV in 1987) were done in (automotively speaking) turbulent times, when car sizes were being slashed and engines were losing cylinders faster than the UAW was losing membership and the domestics were losing market share. Both of the latter only adding to the froth.

Each Delphi study, as the editors of the 1989 version are quick to state, "is a snapshot that collects and presents the opinions and attitudes of a group of experts at that particular point in time." And clearly the attitudes of the experts have changed.

If, a decade ago, there was still strong talk about "throwing the imports back into the sea," today the prevailing feeling might better be characterized as "we have met the enemy, and it is us."

One thing that has not changed is the experts' belief in the need for quality. It remains number one in importance. What has changed, however, is the idea that quality can be a competitive advantage; that's been replaced by the reality that quality — and value — have become such basic issues that you need a carload of both to survive in the market.

"True and total customer satisfaction," the experts say, is the key to the next decade. Technology for technology's sake is history. Such goodies as CRTs, head-up displays and active suspensions, they say, will have only a tiny role, if any. The increased emphasis, in an ever more competitive market, will be on real and perceived value. Technology will be important in terms of competitive edge, but only if it meets customer expectations at a reasonable price.

That's a quick view of Delphi V, the future of automotive technology as seen by 330 executives, engineers and academic/consulting specialists (57 percent from vehicle manufacturers, 32 percent components and parts suppliers and 11 percent outside specialists, consultants and academics). Here are their thoughts on the making of the American car, circa 2000.

Author Bill Lovell is a freelance automotive reporter.

General issues

Fuel and fuel economy: One important reason behind the conservative forecast is a widespread belief that fuel prices will remain stable over the next decade. Panelists predict the price of unleaded regular gasoline will rise only to $1.40 a gallon (in 1988 dollars) by 2000, much less than the price foreseen in previous studies (Delphi I, by contrast, forecasted a price of $2.50 a gallon, in 1979 dollars, which translates to $4.07 a gallon today).

The present optimism on fuel prices is based on several factors: 1) Even with war in the Middle East, real energy prices actually have dropped. 2) Increased appetite for cash in the energy producing countries will require the sale of increasingly larger amounts of crude. 3) Progress in alternative fuel technology is causing those countries to rethink basic policies; they fear that any disruption of supply will only accelerate the move toward alternative fuels. 4) Continued improvement in overall fleet fuel economy and 5) Increased worldwide political stability as the communist countries move toward market-oriented economies.

Of course, the panelists keep in mind the possibility that the Middle East market could crumble, making all these predictions seem as silly, in retrospect, as "Dewey Beats Truman." If that happens, all bets are off — including most of the forecasts of vehicle size.

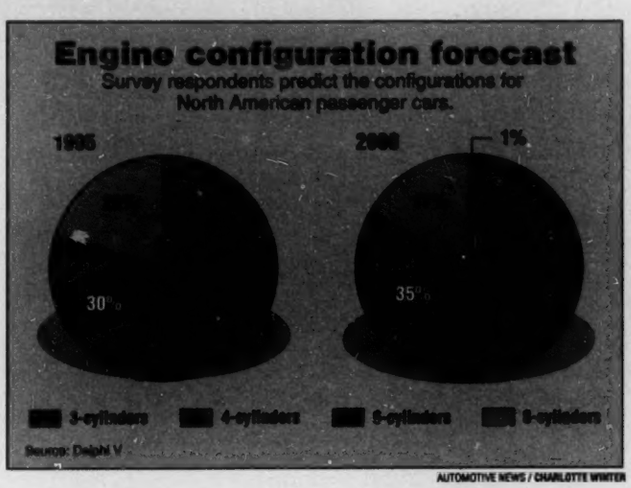
Panelists do think there will be a slight movement toward "flexible fuel vehicles," with 10 percent of the fleet able to use a full range of methanol-gasoline blends by 2000. Panelists think the actual number will depend on three factors: government regulations, world energy conditions, and the success of direct-injection technology in solving current cold-start problems.

Improvements in fuel economy, panelists believe, will come primarily from improved powertrain efficiency, and to a lesser degree from weight reduction, aerodynamics and improved accessory drives. The age of downsizing, on the other hand, is over; panelists believe only 5 percent of future improvements will come from size reduction — and some panelists bluntly say that cars will, in general, become larger.

Competitive factors

No surprises here. For a manufacturer to be competitive in the years ahead, panelists say, it has to be strong in two key areas: Quality and cost. Third, fourth and fifth will be: New technology/product innovation, styling and responsiveness to market (i.e., the time it takes to bring a new car to the showroom).

There is a strong consensus, somewhat ironically, that while quality and cost will become even more important over the next decade, both will effectively disappear as reasons for customers to choose one car over another. They will become so important, panelists believe, that they will become basic requirements for staying in the market, and the surviving manufacturers by 2000 will have essentially achieved parity in these areas. This development will leave new technology (but only where it is perceived by the customer as real value) and styling as the areas in which one manufacturer can grab an edge.



AUTOMOTIVE NEWS / CHARLOTTE WINTER

One phrase expected to become common over the next decade is "life-cycle management," meaning active involvement with the customer even after the warranty is up. The factory-to-customer relationship is expected to move closer to "cradle to the grave," beginning in the showroom and ending with recycling the worn-out product.

To this end, panelists predict improvement and expansion of onboard self-service/diagnostic systems, including the development of artificial intelligence systems for dealerships. Powertrain warranties, meanwhile, are expected to expand to a period of from 8-10 years or 100,000 miles.

All of these developments will keep the customer tied to the dealer longer, making it tough for the independent repair facility.

Government regulation

Panelists expect increased activity in this area — almost a given after the years of relative inactivity during the Reagan administration. They are almost unanimous in expecting more standards in the light truck area, including occupant restraints, vehicle emissions and crashworthiness, but they also forecast tougher occupant safety and emissions standards for passenger cars as well (it should be noted that the study far preceded the recently suggested emissions standards in the Congress). Over 60 percent also believe state "lemon laws" will become more prevalent in the coming decade, while they are almost evenly split on the question of product liability, with about half expecting a federal limit on product liability awards and another half predicting an increase in this area. Electronics and braking systems were the areas most cited for new product liability activity.

Some areas seen by panelists for possible new regulatory action include noise standards (for tires as well as cars) and brakes, with many panelists foreseeing mandatory anti-lock braking by the end of the decade. Most panelists, in fact, see ABS becoming the standard, through market pressure if not governmental regulation.

As for proposed amendments to the Clean Air act, panelists see improved integrated and computerized adaptive engine controls and new fuel injection controls to be the key technologies. Less than a third, meanwhile, see improved catalyst systems as a major factor.

Vehicle development

Panelists expect the current gap between domestic and Japanese lead-times for new products to shrink dramatically, if not actually disappear. For reskinning an existing platform, the gap is expected to shrink from the currently estimated 13 months to five, for a completely new vehicle from an estimated 18 months to eight. Of course, the gap is a moving target.

Panelists estimate that current lead-time for a Japanese manufacturer to develop a completely new vehicle is 42 months. By 2000, panelists think it will take an American manufacturer 40 months to accomplish the same task, while the Japanese will require 32.

Many panelists believe that management, not technology, is the major stumbling block in this area. To quote the study directly, "there is growing consensus that project teams with multidisciplinary membership and a strong leader together with a minimum of interference from top management is very helpful in streamlining the process."

Two technical factors are expected to play important roles in reducing vehicle development time: development of "comprehensive internal engineering data bases and an appropriate network to interface with them;" and increased use of analytical tools, such as computer-generated simulations and models, in place of traditional test and development techniques.

An additional factor is expected to be the stockpiling of technology, validating it and putting it "on the shelf" before it is used in new programs. This, the study says, will be more time-effective than the current domestic practice of inventing new technology during the product development process.

Reflecting both the globalization of the industry and the drop in the number of American engineering students, panelists expect more product design and engineering will be performed offshore. They estimate that 15 percent of such work is now performed overseas; that estimate rises to 25 percent by 2000.

CAR ENGINE FEATURE FORECAST

Engine features	1995	2000
Fast-burn combustion chamber	65%	80%
Knock-limiting devices	30	60
Roller valve lifters	40	60
Distributorless ignition	40	75
Four-valve combustion chamber	15	30

SOURCE: Delphi V

CAR ELECTRONIC FEATURE FORECAST

Electronic features	1995	2000
Electronic transmission	30%	75%
Multiplexing	7	20
Navigation/information	3	8
Variable valve timing	5	10
Drive-by-wire	1	5

SOURCE: Delphi V

Evening things out somewhat, panelists expect Japanese manufacturers in the U.S. to make greater use of American talent in these areas. At the same time, they predict that outsourcing of components by U.S. companies will rise slightly, while Japanese companies will increasingly utilize American parts.

Body and Chassis

Unibody construction will continue to be dominant, with panelists predicting that 92 percent of North American-built cars will be of the integral body/frame type at the turn of the century.

They forecast a slight drop-off in separate body/frame vehicles — down to 4 percent, and a modest rise in space frames, *a la* the new GM minivans, also 4 percent of the market. There are those who think the space frame percentage may be higher, depending on new metal bending and welding technology, but most believe the unibody will continue to be the winner in terms of ease of manufacture, cost and safety/regulatory considerations.

Panelists forecast an average curb weight of 3,032 pounds for domestic cars by 1995, and believe that figure will drop only slightly by 2000, to an average of 2,943 pounds. They foresee only a slight drop in the amount of steel in each car — to 1,560 pounds by 2000 — a drop in cast iron, and modest increases in the use of aluminum and plastics. Interestingly, these overall weight estimates are the highest ever made by any Delphi panel, representing a renewed appreciation for traditional technologies.

MacPherson strut front suspension will drop somewhat in popularity but continue to be the system of choice on 75 percent of domestic cars by 2000, while panelists forecast a slight gain for twin A-arms, up to 25 percent. They see a major shift to independent rear suspension— with 60 percent having four wheel independent suspension by 2000. Few expect electronically controlled active or passive suspension systems to make much of an impact, except on expensive specialty cars. For the mainstream car, they see conventional shocks and steel springs continuing to dominate the market.

Also limited to the high end of the market will be such technologies as electrical/electronic power steering and four-wheel-steering. Such developments, panelists say, are too costly and provide too little ▶

benefit for the dollar to make much of a dent in the mainstream market.

Interestingly, panelists are enthusiastic over the future of antilock brakes, but somewhat less so concerning rear-wheel discs. They think the percentage of domestic cars equipped with four-wheel disc brakes will increase to only 20 percent by 2000 (5 percent each for light trucks and vans), while forecasting that 70 percent of domestic vehicles will have ABS by the same time. They also expect 15 percent to have some sort of traction-control (anti-spin) system by the end of the '90s.

Sixty-three percent of the panelists believe that ABS will become a federal requirement for passenger cars by 1998 — and many who do not think that market pressure will make such regulatory action unnecessary. Clearly, ABS is one technology that the panelists expect will be a huge hit with consumers.

One thing the panelists say is a real dud is the idea of no spare tire. While Delphi I predicted that 50 percent of 1990 cars would be spareless, Delphi V recognizes that the public wants the security of a spare, regardless of advances in tire technology.

In 2000, panelists predict, 10 percent of domestic cars will carry standard spares, 80 percent mini-spares and 10 percent no spares.

Panelists are likewise conservative when it comes to tire features. They expect 30 percent of domestic cars to come equipped with puncture-resistant tires, but just 12 percent "self-sealing" and zero percent "run flat."

Inside the cabin, panelists predict that "conventional" instrument panels and stalk-mounted controls will each lose ground, the former by a considerable extent, the latter only slightly. The use of pods is expected to rise slightly, as are steering hub controls, but the latter will depend on the percentage of cars with air bags. "Some combination of above" is the consensus choice.

Look for better seats, with more emphasis on function than appearance. Panelists look for more multi-adjustable seats, many with electronic memory.

Controls, they say, will be more accessible, perhaps more adjustable, use more electronics, simpler and more functional. Vacuum fluorescent displays will continue to be strong, but multicolor liquid crystal displays are expected to be equally strong by 2000. Cathode ray tubes, as seen on some Buicks the last few years, are not expected to have much of a future.

Panelists expect both passive-belt restraint systems and air bags to be strong by 2000, with air bags the ascendent technology. Eighty percent of domestic cars, meanwhile, will feature rear-seat shoulder restraints (69 percent of the panelists believing such restraints will be legislatively mandated).

On the subject of "friendly" interiors there was deep division among the panelists, but 72 percent thought that such impact-absorbent interiors would provide useful supplementary crash protection. The trend here seems to be toward smoother, less intrusive interior design.

Powertrain/Drivetrain

Aluminum is expected to continue its growth as an engine material, with panelists predicting that 70 percent of engines will have aluminum cylinder heads by 2000. We will also see more aluminum blocks, but only in 12 percent of all domestic engines.

Polymer-based engine components will also grow in popularity, but only in non-moving parts like intake manifolds, oil pans and valve covers. The use of ceramics is also projected to grow, from almost nothing today to as many as 15 percent of 2000 engines, particularly in areas such as valve train components, exhaust manifolds, turbochargers and seals.

Panelists expect the mix among four, six and eight-cylinder engines will remain relatively stable over the next decade, as will engine displacements. Pushrod engines will fade in popularity, they say, while single and double-overhead cam designs will together take over the majority of the market. Multi-valve engines will continue to increase, while 2-valve per cylinder designs will drop to 60 percent. In the valvetrain itself, there will be some movement toward variable timing control and variable lift control, but mainstream use of such technologies is probably more than a decade away.

It is anticipated, overall, that there will be large-scale fundamental redesign in the engine area. Here Delphi V is more optimistic than Delphi IV; 60 to 70 percent of the panelists believe that American engines, now relatively old in design compared to foreign competition, will see fundamental changes in the coming decade.

The panel does not, however, see a great swing toward two-cycle engines: it sees only 2 percent penetration by 2000, 5 percent by 2005. Nor do panelists see any movement toward diesels; only in light trucks do they see any market at all. Likewise, such alternative engine types as stratified charge, rotaries and turbines are seen as having a tiny impact, if any.

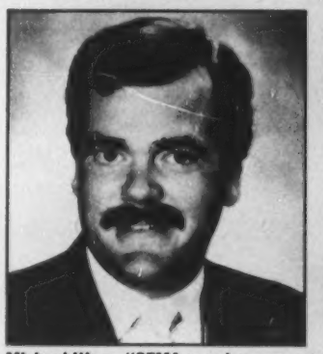
Technical features that do look promising include fast-burn combustion chambers and roller lifters, both of which are expected on the majority of engines by 2000. Other features expected to grow in popularity include balance shafts (on four-cylinder engines), lean-burn technology, powdered metal cams and gears and hollow camshafts. Expected to remain static, at best, are two of today's most-touted features: turbochargers and superchargers, neither of which is expected to be in more than 5 percent of domestic engines by 2000.

Other engine technologies expected to grow over the next 10 years include knock control, distributorless ignition, individual cylinder control of ignition, closed-loop timing and coil-on-plug ignition. Multi-point fuel injection is expected to be the dominant fuel management system, with 75 percent of the market by 2000. Throttle body injection gets the other 25 percent; the carburetor gets an epitaph.

As for driveline configuration, panelists expect front-engine, front-drive to become even more dominant, with 80 percent of the domestic market by 2000. Front-engine, rear-drive, they say, will drop to less than 15 percent, while all-wheel drive will account for 5 percent. Eighty-seven percent of domestic cars will have automatic transmissions, with four-speeds the most common. Continuously variable transmissions will have some impact, though CVTs are expected on no more than 3 percent of 2000 cars. Electronic transmission control is one technology expected to grow rapidly; panelists expect 30 percent of 1995s transmissions to be so-equipped, and fully 75 percent of 2000s. Lock-up torque converters, panelists say, will become almost standard equipment, with 90 percent penetration by 1999. ■

Adding a personal touch

Individualism renews growth in specialty products aftermarket



Michael Warn: "SEMA members are confident growth will occur."

Readers of Automotive News are probably familiar with SEMA and the companies represented by the association, since the SEMA membership is made up of manufacturers, distributors and retailers of specialty and performance equipment found on all cars, old and new alike.

In fact, the nation's automobile and truck dealers themselves, no doubt deal periodically with SEMA-member companies in efforts to embellish their showroom products with specialty gear to add that extra appeal as a customer draw. And therein lies the prognosis for specialty products.

Changes to products in the specialty and performance segment of the automotive aftermarket are often in parallel to those — sometimes subtle, sometimes dramatic — evident in new-car offerings. In many cases the changes are the result of technological progress; but they are often in response to trends from the buying public.

Suffice to say there are more changes to new vehicles as a result of technological developments, while specialty products (accessories) are designed and meet with favor among consumers because of prevailing or impending trends. Specialty products enable the car owner to make changes according to his preferences quicker than if he were to wait for a new car as a result of the model changeover.

By the most simple definition, specialty products are those which enable the car owner to personalize. In the history of our industry segment, the trends and products marketed to satisfy the consumers' demands came about as a result of two specific (basic) hobbyist activities: customizing and racing.

Customizing, and the techniques to redesign cars, has its roots in custom car shows and similar enthusiast get-togethers. Aficionados are responsible for myriad innovative characteristics to a car's appearance.

Today customizing has been all but replaced with terminology that more accurately reflects the broader base of consumer interest: personalizing and individualism.

To refashion a car's appearance or uses, applying specialty merchandise produced by our industry, is to personalize it, to make it a reflection of the owner's intent to have something uniquely different when compared with vehicles of his peers. It is an expression of individualism which some refer to as a form of automotive art. Motorsports, and specifically racing, on the other hand, have made their own contributions to the progress of the automobile, and in virtually all walks of the activity. There is no better testbed than the race track, a factor proven throughout the years.

Today, motorsports activities in vertical forms, such as off-road racing, enable suppliers of light- and medium-truck products a testbed similar to what auto racing has done for the modern car. Hot rodding, in which the specialty and performance products industry has its roots, is a diverse activity which not only represents a substantial piece of the product sales-volume pie, but has over the years offered certain innovative developments of value to the motoring world at large. Of importance to U.S. automobile manufacturers is the R&D achieved test results, usually the product of on-street or on-track testing which substantiates durability claims.

Specialty cars, personalized cars, all forms of racing and hot rodding have prospered through the years. More recently, there's been impressive growth throughout motorsports, and there is every indication it will continue into the 1990s and beyond, signaling even greater sales volumes for suppliers of both performance cars and aftermarket products. SEMA's forecasts are based on developments and research which reveal unprecedented growth. And there are events which clearly support the ambitious projections, among them the annual SEMA Show in Las Vegas.

Last year, the specialty products exposition achieved ranking as the flagship of automotive aftermarket trade shows, with nearly 3,000 exhibit booths occupied by more than 900 companies, and 14,000 buyers in attendance.

Thus as we enter the 1990s, we look not to guesstimate predictions, but rely instead on this aftermarket segment's recent history. Also watched is the trend among car owners and their relentless efforts to personalize cars to achieve individuality, as well as improve on the overall performance, including modifications to those vehicles described as showroom fresh.

In the past few years we've seen evidence of how a single segment of our industry can and does flourish as a result of consumer demands: ground effects systems which will no doubt grow in popularity and enjoy the attending sales volume in the '90s and beyond. It's a sales phenomenon.

Determination among consumers to improve the performance of vehicles is inevitable — always has been. As the industry segment develops and refines products — in many cases those in the electronics category — we'll see increased sales to those who seek improved performance, be it economy, improved operating efficiency or better handling. And the light-truck market, both new vehicles and accessories for them, needs no further explanation.

Changes will occur no doubt into and through the next decade. It's the nature of the specialty business to not only adjust product lines and the products themselves as enthusiasts' preferences reach beyond the status quo, but our industry responds to changes quickly — the SEMA members' advantage in this competitive arena.

Combine that edge with the R&D available from our industry to automakers, and the lower cost compared with their own, and it is clear the auto industry could — and should — look to our industry more often for product development. The doors of our manufacturers are open; the automakers will wisely benefit by walking through those doors to develop cooperative efforts and programs for the development of products and marketing strategies.

It is the opinion of many in our field that the new-car buyer, and the dealer serving that customer, will look to and deal with sectors of the specialty and performance aftermarket more in the future.

There is considerable evidence on the horizon, if not today: Manufacturers, domestic and import companies alike, have recognized and acknowledge the sales volume which awaits dealers not only in replacement parts, but in specialty equipment and accessories.

Will this development impact the distribution and retail segment of the specialty aftermarket? To some extent, yes, since the dealers have an opportunity to expand their sales to the growing number of performance-conscious customers. But the specialists, the hot rodders, currently serving the most sophisticated aficionados of performance, will maintain their positions as experts at the retail level, prepared to assist any car owner with customizing and performance-improvement guidance and products.

Performance products distributors (warehouses) will no doubt become sources to dealerships for product, either as fill-in suppliers or as regular sources for merchandise among dealers who choose not to invest in the substantial inventories needed to serve this growing bloc of customers.

The specialty and performance segment of the automotive aftermarket has thrived on change, for it is on trends this section of the industry is dependent — either those brought about by consumer demands, or those inspired by innovative developments from within the industry and can be traced to the hobbyist activities themselves, be it racing or customizing. But the 1990s will no doubt be looked upon as the decade of change, market segments included.

Changes though there may be, SEMA members are confident growth will occur, in keeping with industry history that's solidly founded on innovation and the ability to respond to trends. That, together with a renewed favor among motorists for individualism and improved performance in their personal cars, combine to support predictions that the 1990s loom as a boom decade for specialty and performance products. ■

Author Michael Warn is the CEO of Warn Industries and the chairman of the board of the Specialty Equipment Market Association.

Humanware

Interaction between man and machine will rise in the '90s

In the year 2000, drivers could have intellectual relationships with their cars, which would be intelligent machines capable of taking control when the driver makes a mistake.

According to Japanese researchers, technology will have evolved into what they call humanware, which puts an emphasis on the interaction between people and machines.

The researchers, with Mitsubishi Motor Corp.'s Technology Administration Department, are Sunao Chikamori, vice general manager; Arata Sumie, manager; and Yuzo Ohta, assistant manager. Their work was presented to fellow engineers during an SAE meeting in Dearborn, Mich., in September.

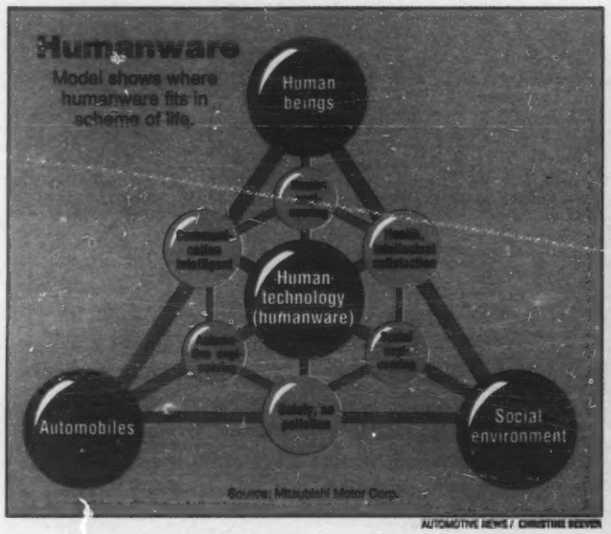
They contend that interest through the 1990s will shift to humanware and away from hardware and software. They say valid predictions of how autos will evolve toward the end of the century can be made only by considering cars as a part of social life.

They focused their work, therefore, not only on trends in automotive technologies but also on international, social and market environment changes.

Overall, world demand for cars is expected to grow mildly at an annual rate of about 1 percent, said the researchers. However, they said, excess production capacity will cause oversupply, leading to such measures for survival as more complicated linkups and cooperation among automakers in different countries. They foresee mutual agreements between manufacturers in advanced nations and an international division of labor among manufacturers in advanced and industrializing countries.

"Superior, unique technologies are even more vital for an automaker to maintain the independence and self-reliance in this severe and complicated situation of internationalization," they said. "These technologies must be developed in line with . . . user trends.

Author Roger Rowand is an Automotive News staff reporter.



AUTOMOTIVE NEWS / CHRISTINE BEEVER

Thus it is even more important to observe the direction and precisely grasp future trends in technologies."

Here are the major social environment changes the Mitsubishi people foresee as the year 2000 nears:

- A population trend toward aging is expected to grow after a slow start in Japan and continue in Western countries.
- Women's participation in the Japanese work place and in public affairs will continue to grow.
- Men and women will have more free time as the number of hours annually spent working dips from 2,200 to 1,800, and income will increase in Japan.
- A population segment of the New Rich may emerge, which may alter the Japanese tradition which holds hard work as a strong virtue.

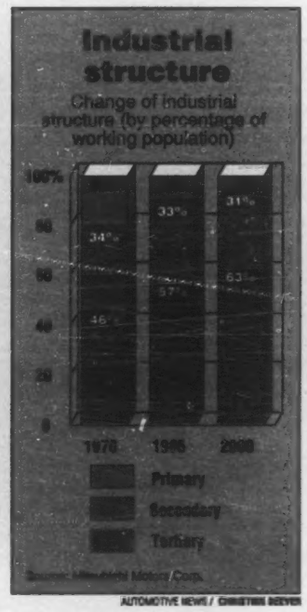
Based on those assumptions, the Mitsubishi researchers also predict large amounts of working time will be devoted to preparing for what they called worthwhile living into old age. That will involve home medical equipment, total asset management, private homes for the aged, residential meal service and personal pension and insurance plans.

Too, they said, participation in cultural and creative activities will increase, especially for housewives, because of day-care and household services.

There will be a major switch in consumption; people will seek more services and turn away from goods.

Physical distribution of goods in 2000 will require lightweight and compact products, not big, heavy trucks. The researchers predicted a continuing need for large-lot loads and long hauls, but they said the need for inexpensive, fast and safe small-lot loads, short hauls and door-to-door services will increase greatly because of changes in industrial structure and growth of non-store retailing.

The forecasters see a gradual international harmonization of laws and regulations covering exhaust emissions, fuel economy, noise and safety. Although other countries will emphasize various segments of the auto industry, Japan will hold the top position in production and



AUTOMOTIVE NEWS / CHRISTINE BEEVER

technology, predicted the researchers.

In engines and transmissions, current basic trends will continue but more emphasis will be placed on electronic precision and optimum control and new materials will be used, they said. Manual transmissions will retain a cost advantage over automatics but lose their fuel economy advantage as automatics are improved.

Toward 2000, critical body performance factors will be improved, including safety, rust prevention and aerodynamic characteristics, they said. However, they foresee no conspicuous change in shape. Although current basic structures will continue to be used, they foresee unit body structures that permit easy, automatic assembly, and custom-made structures that will suit particular needs of customers. Some body components will come with shapes that can be changed by the user.

The group also predicted composites will be used extensively and electronics will be put to work controlling more engines and transmissions. As 2000 nears, electronics that now are in their second generation will be in their third generation, involving integration and systemization.

In 2000, automotive computers will provide overall control of the vehicle. Major technology areas to develop in the decade to come will include:

- Ways to integrate overall control of a number of computers.
- Transmission techniques that allow a number of signals to be arranged and sent over single wires.
- Smart sensors with judgment and intelligence.
- Compact but powerful actuators.

Development of the materials of the future, is well under way in Japan and will produce results in the '90s, said the researchers.

Among the possibilities for automotive applications, they foresee composite materials used in gears, clutches, bumpers and pistons; high molecular weight materials used for springs, tires, oil pans, tanks and fans; and alloys that remember their shape and are directionally solidified.

Manufacturing trends will move toward ways of being profitable on small quantities of cars. "The future trend of production technologies is toward manufacturing systems that meet the ever-increasing diversification and individualization required of automobiles and fill the demand for made-to-order vehicles in addition to a higher degree of automation," said the group.

As components of that automation, they listed robots and computer-controlled laser-beam machining and electron-beam machining.

Parts and materials will come from a far wider international area. This trend is also true in design and production, they said, and internationalization of terminology can be expected.

Near the end of the 1990s, people will seek intellectual satisfaction, which will lead to the researchers' humanware. ■

Putting the brakes on car theft

1.4 million stolen in U.S. in '88; tops in the world

Experience by the National Automobile Theft Bureau — a non-profit corporation that monitors vehicle thefts — indicates there is increasing activity in international trafficking of stolen vehicles.

U.S. Customs estimates some 200,000 stolen vehicles may be illegally exported from the United States each year. These stolen vehicles are transported via air and water to Europe, the Middle East, the Caribbean nations and by land, sea and air to Central and South America.

The United States is not the only nation confronted with a growing vehicle crime dilemma. Reports from selected nations around the world indicate that the vehicle theft rate per 100,000 population, is higher in Scotland, England, Wales, Australia, France, Denmark and Sweden than it is in the United States.

The United States, however, continues to lead all nations in total number of vehicle thefts, with over 1.4 million last year.

Vehicle crime is by far the worst of the property crimes, which also include burglary, larceny-theft and arson. Although vehicle theft accounts for only 11 percent of total property crimes, it accounts for 48 percent of all property crime costs. Last year alone, vehicle theft costs were approximately $7 billion. What may be worse of all is that vehicle theft affects Americans twice. It costs first in property loss, time loss, inconvenience, insurance premiums, and most significantly in injuries and lost lives.

Second, it costs in tax dollars that go to maintain law enforcement activities, courts, prisons, and other agencies of vehicle crime control.

Author Paul W. Gilliland is president of the National Automobile Theft Bureau.

Criminal justice system

Car theft is considered a high-profit, low-risk crime that permits timely liquidation of the object of the crime with little chance of detection and identification. Vehicle theft, when compared with the more serious crimes against persons, is assigned a low priority by police.

During the last 10 years — while the crime has increased 44 percent — many law enforcement agencies experienced reductions both in manpower and in funding. There have been over a million thefts a year for the last five years.

Vehicle Security

Many of the previous vehicle security system designs — primarily directed at the resistance to force normally encountered in the smash-and-steal method of operation — were ineffective.

General Motors, for example, has been equipping all Corvettes, starting with 1986 models, with a Vehicle Anti-Theft System.

VATS, as the system is called by GM, uses computerized circuitry to identify the matching resistance of a pellet embedded in the ignition key in addition to the normal mechanical match of the key with the lock in order to start the car.

In 1985, before VATS was installed as standard equipment, 1985 Corvettes experienced a theft rate of 14.39 thefts per 1,000 vehicles. In 1986, after VATS was installed as standard equipment, the theft rate dropped to 10.94 thefts per 1,000 Corvettes manufactured during the year — a 24 percent decrease in the theft rate.

In 1987, the second year VATS was standard equipment, the theft rate for Corvettes dropped to 9.57 thefts per 1,000 vehicles, a further decrease of 12 percent.

Currently, General Motors installs a corresponding theft deterrent system, named Pass-Key, as standard equipment on both the Camaro and the Firebird.

Index tracks theft, fraud

The National Automobile Theft Bureau is a non-profit corporation established for the investigation, location and identification of stolen vehicles.

In the bureau's system, if a vehicle is stolen, the owner promptly reports the theft to law enforcement and then to his or her insurance company. The insurance company then reports the theft to the National Automobile Theft Bureau where it is automatically edited to determine the accuracy of the VIN.

The database is then searched for any record of previous history involving the vehicle.

If a vehicle identification number fails the bureau's search, the number is compared against a file containing over 240 million manufacturers' records of vehicle assembly and shipping information. ■

Retailing in the 1990s

Manufacturers continue to look for a competitive edge

Predicting the future is always a dicey business, especially during times of rapid change. But change at an accelerating rate is precisely what J.D. Power and Associates foresees for the automotive industry in the 1990s. Moreover, this change will come in all facets of the industry.

Case in point No. 1: automotive design. Our data show that American consumers believe that the gap in product quality is narrowing. As perceived product quality nears parity during the next decade, and as some of the other product differentiation criteria blur (With the advent of passenger minivans, what is the difference between a car and a truck?), automotive designers will be challenged to find new ways to make their products stand out.

Whiteside

One possible direction of change is a proliferation of niche vehicles, each tailored to a specific type of activity.

We saw this approach, for example, in a recent show of automotive design exercises by students at the Pasadena-based Art Center College of Design. In addition to the swooping, aerodynamic exteriors and fighter-pilot inspired cockpits, a common theme ran through these future designers' concepts — each vehicle reflected a relatively specific activity for which it was designed.

For example, a "2-passenger plus light, bulky load" vehicle, with its two passengers seated fore and aft along one side and a long trunk arranged parallel to them, appeared ideal for hauling sports gear such as golf clubs or skis.

Case in point No. 2: global competition. The accelerating globalization of the auto industry will end in a worldwide Big 3 automakers, and they certainly will not be General Motors, Ford Motor Co. and Chrysler Corp. (although one of these may be among the new Big 3).

Those who doubt that a new, global version of the Big 3 automakers will emerge need only recall Michelin's recent acquisition of Uniroyal Goodrich, putting Michelin in the lead in the three-way race for global leadership in the tire industry.

Case in point No. 3: automotive retailing. In the United States and around the globe, the way motor vehicles are distributed, sold and serviced will also reflect this rapid pace of change.

J.D. Power and Associates, which has been tracking changes in the U.S. automotive retail system for more than 20 years, is predicting that during the next 20 years there will be a major consolidation in the number of retail sales outlets.

Also predicted is a similar reduction in the number of franchise owners and a proliferation of a new type of retail service outlet - the factory-authorized franchised service garage, handling both warranty and post-warranty work.

It is on the third arena of change that we want to focus here. We most recently took an in-depth look at these changes earlier this year in a publication titled *The Revolution in Automotive Retailing: A Special Report on Consumer-Driven Changes in the U.S. Dealer Franchise System.* In preparing this study, we recognized that the foundation for sweeping change in the franchise system has already been laid. A brief look at history illustrates this point.

Author David E. Whiteside is director of publications for J.D. Power and Associates.

Winning retailers will have the widest choice, best on-spot delivery capabilities and best price. AUTOMOTIVE NEWS/JOE WILSDENS

CONSOLIDATION OF U.S. AUTOMOBILE DEALERS

	1985	1990	2000
Dealer principals	17,660	16,000	8,000
Retail sales points	24,700	25,000	18,000
Factory-authorized service outlets	—	—	5,000

SOURCE: Revolution in Automotive Retailing ©1989 J.D. Power and Associates

In 1950, there were 47,500 new-car and -truck dealerships across the United States. Most of these sales outlets were owned by hometown entrepreneurs, and the overwhelming majority of them held one franchise to sell one brand of domestic car or truck. Only a handful of import franchises was available. Detroit ruled supreme in this one-man, one-franchise system.

Today, there are only 16,300 dealer principals operating 25,000 retail sales outlets. Two-thirds of these hold more than one franchise. Moreover, 30 percent of U.S. dealer principals hold at least one Asian franchise, and 20 percent hold at least one European franchise (total percentages do not equal 100 because of dual ownerships).

All that is a matter of record. We are predicting that the dramatic consolidation in the U.S. new-vehicle retail industry is far from over.

Indeed, the increasingly competitive market conditions that will continue to dominate the auto industry during the next decade or longer will drive a substantial number of these dealer principals out of the industry. By the year 2000, there will be only 8,000 dealer principals in the United States. They will operate a mere 18,000 retail sales outlets.

Other changes we foresee in the franchise system include the following:

- To satisfy consumer demand for convenient, hassle-free shopping, light-duty motor vehicles increasingly will be sold in environments that will approximate those found today among mass merchandisers of consumer electronics and home appliances.
- As consumers travel farther from home to purchase their cars and light trucks in these centralized locations, brands will be forced to share — and compete for — the automotive equivalent of shelf space. The name of the retailer will come to have equal or greater meaning than the manufacturer's brand, just as it does today in television sales, for example.
- A corollary of this development, however, will be a need for a new type of service facility that can offer warranty service as well as post-warranty service.

Already there are signs that the manufacturers are becoming willing to create a new type of factory franchise: the factory-authorized service franchise. Witness, for example, Saturn Corp.'s decision to permit separate sales facilities and GM's plan to certify 2,000 independent service shops as Delco-Tech Service Centers, both of which are but early signs of this shift.

- As the size of investment required to create the new type of automotive mass merchandising center grows, many traditional dealer principals will cease to be able to compete. New players such as financial institutions, public companies and other legal entities will emerge to share the field with those individuals who are able to survive under the new conditions.

Thus, not only have the domestic makes lost control of the U.S. new-vehicle market, but all manufacturers, who as a group were the natural industry leaders when production was king, have ceded control to the consumer.

This consumer-driven market is characterized by increasing choice and availability as new nameplates and models of both cars and light trucks continue to enter the U.S. market. Moreover, the opening of more transplant assembly operations coupled with the domestic industry's determination not to surrender more market share is producing an over-abundant supply of virtually all makes and most models.

The U.S. automakers' continued reliance on sales incentives and rebates plus many imports' decision to join the battle demonstrates vividly the impact of this shift to a buyer's market. As J.D. Power and Associates data reveals, the gap in perceived product quality continues to narrow.

The direct consequence is a market in which product differentiation is diminishing and the competitive edge increasingly will go to the retailer with the widest choice, best on-spot delivery capabilities and best price.

This is the formula of the mass merchandiser. The new-vehicle franchised dealer system as it is known today is laboring even as the pace of the race quickens.

Service needs keep slipping

Better product quality means greater durability, reliability

What service in the 1990s will be like has a lot to do with what vehicles of the 1990s will be like.

Manufacturers acknowledge that product quality and the quality of service will be the major discriminators between the winners and the losers in sales.

Better product quality means greater durability and reliability. Simply stated, things will last longer and not break as often. The need for repair service has been declining and will continue to do so.

Years ago engine valve jobs and piston ring replacements used to be common. Not anymore, and that trend is going to continue. Exhaust systems are now made of stainless steel. What used to last two or three years in the Rust Belt now lasts five or six years. Outside the Rust Belt the stainless steel exhaust system is virtually a lifetime system.

For many, visits to the repair shop for costly repairs are going to cease.

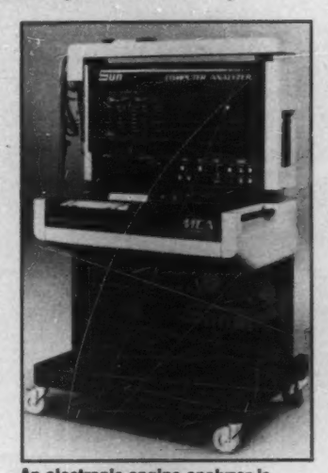
Where vehicles go for service won't change much from today. If something major breaks when the vehicle is under warranty it will go back to the dealer. Vehicles that need repair after the warranty will go to dealers, gas stations, specialists and independent repair shops. With the decline in repair work due to higher product durability and reliability, the service business will become very competitive on price and customer convenience.

The use of electronically controlled systems on new vehicles has been exploding over the past five years. This is sure to continue into the mid-1990s. But then the pace of new electronic systems will slow; by then every major vehicle system will be electronic.

In spite of the reputation that "black boxes" have earned in the past, they do bring some great service benefits.

First, as the pace of new electronic controls slows, the service industry will become very competent at making diagnoses and repairs.

Second, the diagnostics for these electronic systems will be standardized and on the vehicle, making it easier to obtain competent repair service.



An electronic engine analyzer is used for diagnoses and repair.

Finally, electronics will make it possible to place a vehicle maintenance reminder system on the vehicle that determines the maintenance needs of the vehicle based on its use. Every owner will have a customized maintenance schedule to follow that will insure even greater durability for the vehicle.

Regular preventive maintenance will become the key service item.

Things like oil changes, filter changes, spark plug replacement, lubrication, wiper blade replacement and periodic inspections of wear items like belts, hoses and brake pads will continue to be necessary. The intervals for oil changes will probably not be extended any further than the current 7,500-mile recommendation. But spark plugs that needed to be changed twice a year 10 years ago now only need to be changed three or four times in a vehicle's lifetime. Brake pads that used to need to be replaced every 24,000 miles now easily go 50,000 to 60,000 miles.

What is the future of the do-it-yourselfer? He will still be around. There just won't be as many things that will need repair or attention.

A person works on his own vehicle because of economics and self satisfaction. These reasons have nothing to do with the vehicles.

Regular preventive maintenance will still be necessary. Alternators, starters, batteries, shock absorbers, struts, spark plug wires, distributor caps, belts, hoses and brake pads will still be on vehicles and will still need to be repaired or replaced. These things will not fail as often or need to be serviced as often. The do-it-yourselfer will still work on his vehicle, he just won't need to do it as often.

Hazardous waste disposal is going to be a rising issue throughout the 1990s. Freon, anti-freeze, waste oil and batteries will require special disposal methods to minimize any negative impact on the environment. The cost to manage these volumes of hazardous waste will mean some increased costs to the providers of service and some new restrictions that the do-it-yourselfer will have to deal with. But these problems will be overcome with time.

The need for service in the 1990s is going to decline. To the vehicle owner that means less expense in vehicle maintenance. It also means a lot of the service providers are going to try and attract business by pricing their service at attractive levels and offering their service at the convenience of the customer. The 1990s will also see the tidal wave of black boxes slow down so everyone in the service industry can catch up with the technology. ■

Author Robert Johannes is chairman of the Car Care Council.

The chemical aftermarket

Overall, modest growth is predicted for the next decade

A variety of influences will have a profound effect on various segments of the consumer automotive chemical aftermarket.

Environmental restrictions, extended auto manufacturer warranties and technological developments that reduce the need for maintenance will slow some segments of the market. On the other hand, changes in new market opportunities, industry restructuring, pricing and increased consumer diligence/awareness will allow some manufacturers to enjoy healthy market growth rates during the same period.

The overall market is projected to grow 4.4 percent during the next decade, reaching $7.7 billion by year 2000.

In 1988, wholesale shipments of automotive chemicals to consumer aftermarkets (retailers and professional services) represented 59 percent or $4.6 billion of the total market. The original equipment manufacturers segment of the automotive chemical market will increase its market share only marginally during the next decade — from 41 percent to 42 percent of the total.

Ethylene shortages and subsequent huge price increases dramatically impacted the antifreeze and coolant segment of the consumer aftermarket. As raw material supplies increase with new ethylene capacity coming on-stream, the 13.7 percent annual growth enjoyed between 1982-1988 for these products will drop to 1.9 percent through 2000.

The autobody products segment of the consumer automotive chemical industry will also experience a decline as manufacturers increasingly provide rustproofing as original equipment, and superior coatings and paints come into use.

Leading Edge Reports, a Cleveland-based market research firm, provided this article.

WHOLESALE MARKETS FOR AUTOMOTIVE CHEMICAL PRODUCTS

(millions of dollars)

	1977	1982	1988	1995	2000
Wholesale shipments	2,704	3,506	5,542	7,090	9,135
Professional service	917	1,111	2,084	2,700	3,500
Retail outlets	1,787	2,395	3,458	4,390	5,635
% of professional service	33.9	31.7	37.6	38.1	38.3

SOURCE: Leading Edge Reports

Improvements in original equipment manufacturer coatings and structural materials, changes in paint formulas and application technology, and various environmental regulations will slow the annual growth of this market segment from a healthy 10.4 percent during 1977-1988 to 5.3 percent during the next decade.

On the positive side, consumption of consumer maintenance products (a loosely defined catch-all segment of the industry) will experience the highest growth rate during the next 10 years.

This segment, which includes carburetor cleaners, degreasers, solvents, de-icers, penetrants, air-conditioning refrigerants, tire patch-and-fill materials and many other products sold in both bulk and aerosol form, will grow 8 percent annually from $295 million in 1988 to $735 million by 2000. A constant flow of new products will help keep this a dynamic market.

The consumer automotive chemical industry is divided between retail sales to do-it-yourselfers and the professional service industry. The do-it-yourselfers will retain the largest share of the market for auto-chemical products through 2000. In 1988, wholesale shipments to retail outlets amounted to more than 62 percent of the total market. Due in part to increased consumer diligence/awareness toward maintaining their expensive automobile investments, this level will be maintained throughout the coming decade and reach more than $5.6 billion by 2000.

The professional service industry makes up the remaining share of the wholesale market. Automotive repair shops, tune-up facilities, service stations, quick lubes, car dealerships, etc., had sales of more than $2 billion in 1988.

The fastest growing segment of the market, quick lubes, will enjoy growth rates as high as 15 percent annually during the next decade. There could be some risk, however, to the small entrepreneur who ventures into this market, since oil company-owned chains could enact price-cutting strategies to drive out the small operators.

Only half of the service stations in operation in 1972 survived into 1988, and the number is expected to continue to shrink through 2000. On the other hand, sales volume per station will increase as more automotive and non-automotive services are expanded, (e.g. video sales, car washes, full-maintenance services, convenience stores, fast food, etc.).

The surviving stations, however, are expected to become tightly controlled by the major oil companies.

A major concern throughout the automotive chemical industry will continue to be clean-air regulations, which are expected to have a major influence on chemical use and disposal through 2000. Paint shops, already suffering reduced profits as a result of restrictions on emissions, will see keener competition as the chains increase their domination over this market.

SOURCE: Leading Edge Reports

The automotive chemical aftermarket consists of two main segments, the commercial aftermarket and the consumer aftermarket. Commercial applications of automotive chemicals involve some 40 million trucks and other motor vehicles used to transport goods or people for commercial purposes. The consumer aftermarket consists of more than 140 million motor vehicles used to transport people, typically for private, non-commercial purposes.

Shipments to the consumer segment accounted for nearly 60 percent of the total $7.8 billion automotive chemical market in 1988. Average annual growth of the consumer aftermarket was nearly 7 percent as shipments rose from $2.2 billion in 1977 to $4.6 billion in 1988. Demand is expected to exceed $7.7 billion by 2000.

Various factors contribute to consumer aftermarket demand. Some of the most important are the size and age of the automobile population, automobile prices, fuel prices, automotive technology, disposable consumer income and development of new automotive chemical products. Effective marketing, promotion and distribution are essential in this market, and distribution systems are complex.

Of the $4.6 billion worth of automotive chemical product shipments to the consumer aftermarket in 1988, more than 27 percent were lubricants. This $1.2 billion product group included motor oil, greases and related fluids. The lubricants segment was characterized by only modest price growth during the 1980s. ▶

3 groups to watch in '90s market

Baby boomers, women and seniors will play dominant roles

In hindsight, many remarkable marketing success stories seem to be almost sure things — the premises were obvious, the strategy was clear.

A product is brought to market at just the right moment, or a growing need and ideal solution converge in the marketplace, and everything is roses from there on.

And yet, an equal or greater number of opportunities, prospects and niches are not seized or exploited even as they lie, just as apparently, right before us.

The most obvious explanation, of course, is that while hindsight is 20/20, foresight is not.

Nevertheless, as we prepare for the marketing challenges of the next decade, the more attention we can give to the social and economic trends that will define the automotive market and the more we can anticipate the customer needs and concerns growing out of those trends, the more likely we are to be the architects of our own success. While the future cannot be foreseen, we invent it every day.

Of the possible social and economic trends that might be identified, demographic trends are among the more important. Their usefulness lies in establishing a key definitional component of the market, namely, the basic, identifying characteristics of the people that will comprise it.

In that regard, we have identified three groups that will be particularly significant in the automotive marketplace. They are the ubiquitous baby boomers, women and senior citizens.

The boomers

By now, we are all thoroughly familiar with this 2,000-pound gorilla of the marketplace. The music we hear, the television we watch and the products we buy are all influenced, if not determined, by this concentration in the population.

But if you think it's bad now, just wait until the 1990s. The 1990s will differ from all previous decades in that the baby boomers will maximize their incomes.

What does that mean for the auto industry? First of all, it means that the industry must determine who these people are, or more precisely, what the boomer submarkets look like.

Although the model boomer of the 1990s may look like a character from *fortysomething*, not all boomers are alike. The increasing age, income and fertility of a large number of the boomers are probably the most significant elements to be considered.

But that does not mean that the stereotypical childless, two-wage-earner yuppie couple of the 1980s will disappear. They will still exist, but as a smaller segment of the overall marketplace. Their importance to a marketing strategy will depend in part upon the particular product mix being marketed to them.

In broad strokes, though, the maturing of the boomers means that there will be far more disposable income available for automobile purchases.

That fact, coupled with the projection that sizable numbers within the group will be experiencing mid-life crises, suggests that some fairly upscale manufacturers (Porsche specifically comes to mind) may see a significant increase in the demand for their products.

That will be true so long as they can resist or reverse the image dilution that has consistently accompanied the downsizing and cheapening of some of the luxury vehicle lines.

Certainly, the mid-life-crisis phenomenon will not be the only demographic surge arising from the boomers. The current trend among the boomers to save more of their incomes, be more concerned with the quality of life and concentrate on providing for their children's future will also have an impact.

In that regard, another prediction can safely be made. Many of the children of the baby boomers — members of the baby boom echo — will reach driving age. Unfortunately, in the transportation area, they are more likely to be the victims, rather than the beneficiaries, of their parents' wealth accumulation.

While the boomers themselves may be in the market for some fairly upscale vehicles, they will be in no mood to extend the same courtesy to their children after all those years of saving and sacrifice. Instead, just as was true for their parents, the children of the boomers will create a sizable market for sturdy and safe, but necessarily low-priced, automobiles.

Another likely outlet for the boomers' excess wealth, and one related to the quality-of-life concern, will be recreational properties. And along with the demand for recreational properties, there will be a parallel demand for recreational vehicles. Thus, the market for four-wheel-drive cars, trucks, Jeeps and related vehicles will increase during the 1990s.

But the demand for RVs will most likely have an additional impact: a reduction in demand for minivans and station wagons. As their children mature, the boomers' need for such vehicles will decline. That will happen at the same time that their interest in RVs will be driven upward by their life circumstance.

While those dual trends do not imply that there will be no substantial demand for the now popular minivans, it does suggest that the demand will level off or even decrease as the decade progresses.

Finally, the dominant trend for wealth accumulation within the baby boom generation also has a negative counterpart. The already significant economic underclass will continue to expand during the 1990s.

As the wealth distribution follows today's trend toward bipolarity, a substantial portion of the population will be excluded from the new-car market because of its economic status. Some solace will be provided to the dealers (though not the manufacturers) by a flourishing used-car market that will maintain its strength as we proceed into the next decade.

SOURCE: Leading Edge Reports

Porsche 928 automatic could attract more buyers in the 1990s as the Baby Boom generation maximizes its income.

Women

The economic power of the baby boom generation is not the only trend that will define the market of the 1990s.

The increasing social integration and market power of American women will be felt even more in the next decade. Industry statistics show that women now represent 45 percent of new-car purchasers and are involved to some extent in 80 percent of all new-car purchases.

Indications are that those figures will increase to the point where women exercise at least as much power in the automotive marketplace as men.

A successful response to that new market reality must go beyond designing advertisements that say, "We like women customers." A heightened sensitivity to the desires and *sensibilities* of women customers is the necessary next step. In that regard, the auto industry might heed developments in the television industry, which is continually responsive to mass consumer tastes.

Recent programs that have been most successful, both critically and, more significantly, commercially (e.g., *Murphy Brown* or *Roseanne*) are shows that feature women in prominent decision-making roles.

To the extent that women represent a distinct market segment, the breakaway automotive marketing successes of the 1990s will be generated by production and marketing concepts that feature women in decision-making roles.

Most likely, the creation of campaigns and media responsive to those audiences will require the active involvement of key female participants, such as Laurel Cutler, vice president of Consumer Affairs at Chrysler.

But working toward the functional empowerment of women in the traditionally male-dominated automobile industry will be no small task. Especially since such changes must occur at both the manufacturer and dealer levels.

But it is anticipated that two benefits will accrue from those changes. First, the product mix offered by manufacturers will more likely address the needs of women in the marketplace. Second, the approach to service within dealerships (and supported by manufacturers) will be more sensitive to the expectations of women customers.

Both of those benefits are necessary to build a strong and loyal customer base among women. That base will be critical to the success of dealerships in the 1990s.

Seniors

The final dominant demographic trend may have more implications for the transportation industry than the auto industry in particular. That trend has been generally referred to as the "graying" of America: the increased number of senior citizens in the population.

Since the large senior population will expand greatly as some baby boomers approach retirement age, improvements in housing, health care and transportation will occur.

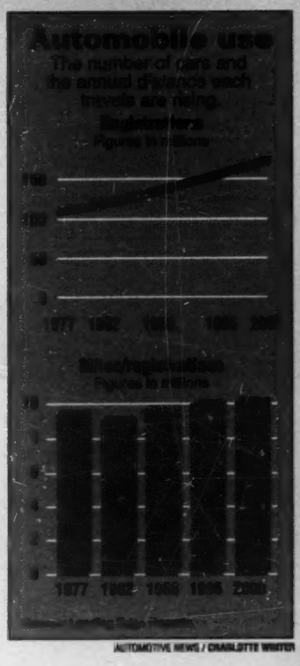
It is difficult to predict exact events and their impact on the automobile industry, but one assumption is safe: There should be an increased need for maxivans — van-type vehicles that are somewhat larger than traditional vans.

Some of those vehicles are already on the market, but the demand will increase as society begins to deal with the growing needs of an expanding elderly population.

Conclusion

We have approached the topic of demographic influences on the 1990s automotive market with the assumption that the auto industry will monitor the changing demands of the marketplace and respond to them. Such monitoring should, at the very least, involve three dominant groups — baby boomers, women and the elderly.

Admittedly, the broad industry implications described for each of the groups are only the most general guidelines. We cannot at this point predict sudden shifts in the preferences of group members, only that those groups will have a dominant influence on the marketplace.



AUTOMOTIVE NEWS / CHARLOTTE WHITE

Clearly, there is a critical role for market research to provide accurate information on consumer preferences and expectations as the new decade approaches.

Finally, and most important, we should emphasize that the product and process discussions for the three demographic groups have had one underlying and dominant theme:

All three groups are distinguished by a concern for value in their purchases. Thus, the concern for monitoring and improving customer satisfaction that has become the watchword in the late 1980s will be even more important in the next decade. Demographic trends are simply too strong to ignore that point.

The 1990s will be the decade in which tracking and responding to customers' expectations will be honed to a fine art. Those who are not preparing to do that will find their business success placed upon a precipice, ready to fall with the dawning of the new decade. ■

Star-gazing with the analysts

They see slow start for '90s, then upturn; gains for transplants

Analysts and auto industry experts expect a level car market with slim annual growth rates of 1 to 1.5 percent in the early 1990s.

The rosy 10 percent increases of the mid-1980s aren't in the cards, although analysts expect some improvement in the mid-1990s.

Competition will be fierce. Manufacturers will look upon this decade as the "easy '80s," and they will view the next 10 years as the "competitive '90s," said analyst, Chris Cedergren of J.D. Power and Associates in Agoura Hills, Calif.

Some kind of slowdown is inevitable, analysts say, but it will be followed by a creeping recovery. "A lengthy shallow downturn is more likely than a sharp deep recession for the 1990s," according to the recent University of Michigan Delphi V study of auto industry executives and managers.

In the short-term, Ted Sullivan of the WEFA Group in Bala Cynwyd, Pa., said, "We're not expecting a lot of improvement. Affordability conditions remain weak. High interest rates are affecting car loan payments." WEFA looks for sustained growth through 1992, depending on the rate of inflation.

Analyst David Healy of Drexel Burnham Lambert in New York, agreed that there will be some kind of downturn in car sales, most probably in 1990. Scott Merlis, an analyst with Morgan Stanley in New York, said he doesn't forecast recovery until 1991.

Bernard Campbell, Data Resources/McGraw-Hill director of transportation and automotive services, said, "Right now, we have as many cars as we need on the road. We have a stock of about 170 million vehicles and there about 190 million people of driving age. That's very close to a 1-to-1 ratio. It's very difficult to get much beyond that.

Campbell said that "the long-term outlook for the car market is very slow growth."

"I don't think any of the car companies are going to have much fun in the next few years," observed Ann Knight, analyst and vice president of Paine Webber in New York. "And that's surprising news because Data Resources and our firm have forecast a pretty good economic climate."

Vehicle sales will be sluggish in the next few years because of slower economic growth, price increases on new vehicles, a bulging supply of late-model vehicles on the road and a softening of vehicle resale values, according to Michael Luckey of Michael Luckey Consulting Group in Cresskill, N.J.

Sales will rebound and move upward by 1992, Luckey and others believe. Peak years for the auto industry are projected in 1992 and 1993.

For 1992, Knight projects a 16.2 million light-vehicle market, and Merlis said he sees a market of nearly 17 million vehicles in the United States.

If the dollar stays where it is, the Big 3 can be written off, said Ronald Glantz of Montgomery Securities in San Francisco.

"Presently, the Japanese can deliver a car for $300 less than we can build one, and transplants can build one for $650 less than Detroit," he said. In the future, Japanese and Korean unit labor costs will go up less than those in the United States; their advantage increases, he said.

About 20 percent of Big 3 sales could be cars made in partnerships, such as Ford selling Mazda-made cars.

AUTOMOTIVE NEWS/JOE WILSON

A rosier long-term outlook is projected by auto industry experts polled in the Delphi V survey by the University of Michigan's Transportation Research Institute.

A healthy consolidation period for a decade of strong worldwide economic expansion beyond 2000 is expected, according to Delphi respondents.

Still, inflation is running at its fastest clip since 1982, said Data Resources economists and Lester Thurow, dean of the Sloan School of Management at the Massachusetts Institute of Technology. Thurow said that since 1982, Americans have consumed $800 billion in imported products that aren't even paid for.

DRI and Thurow said that business is obsessed with short-term profits. Mergers and acquisitions have created more debt than most firms can handle. It may also create a bigger debt in the next year and a half and hence a tougher market for consumers.

Production outlook

Vehicle production forecasts will have to be more realistic because of increased competition and the growth of transplants' manufacturing capacity.

A study by Autofacts Inc. of Philadelphia said that seven assembly plants will open and three will shut down in the next five years. Capacity is expected to climb 14 percent to reach 16.3 million units by 1994.

Current utilized capacity for all 82 automotive plants producing cars and light trucks in North America is about 87 percent, according to the study. In 1989, utilized capacity is expected to drop 3 points from last year, and in 1990 Autofacts sees it declining another 5 points. But during the 1991-94 period, Autofacts expects capacity utilization to average 84 percent with transplant competitors.

But there will be a production shortfall of U.S.-built light trucks in the early 1990s, according to William R. Pochiluk, president of Autofacts. "The capacity problem is mostly a car problem. In fact a shortage of domestic light-truck capacity is expected by the early 1990s," he said.

Cedergren agrees that by the mid-1990s, most production capacity will be "rectified." He said General Motors is expected to close four plants while Ford and Chrysler should each close one.

The big story will continue to be the transplants' increasing share of car and light-truck production. It will rise to at least 15 percent in the next decade, many analysts say.

Transplant production will increase from 900,000 in 1988 to 1.9 million in 1992, according to Campbell, "For every three transplants sold, two domestics will be displaced — and one import," he said.

Transplant production will be running at a healthy 75 to 80 percent of capacity by 1992, although it will not be pushing all out, according to Healy. In 1988, transplants earned an 88 percent capacity rate overall, well above average performance for cars, the Autofacts study reported.

Sales outlook

All the growth in the light-vehicle market will be in light trucks, analysts say. Cars will be flat.

The passenger-car market will continue to be a battleground between domestic and import makes, according to the University of Michigan Delphi V study. Sales will rise about 1 percent per year, but certain segments will decline, the respondents suggested.

The U.S. marketplace is already international, according to analyst Maryann Keller of Furman Selz Mager Dietz & Birney in New York. By 1997, she predicts, even if foreign-based firms fail to meet their sales targets, "non-U.S." brands will account for 45 percent of the cars and 23 percent of the trucks sold."

The most exciting demographic variable in the 1990s will be: What will the maturing baby boomer buy? By 2000, more than half the population will fall into the generation born from about 1945 to 1960.

In the past, older drivers have preferred domestic makes, according to market research from Newsweek, Advertising Age and some of the car companies. That may change with the baby boom generation. They may choose upscale versions of import makes that they now drive, many analysts believe.

Light-truck and van makers will do what the Japanese have done. They will evolve their truck products into more luxurious vehicles. Manufacturers selling both cars and trucks/vans in the 1980s include Chevrolet, Ford, Dodge, Plymouth, Toyota, Nissan, Mazda, Mitsubishi, Isuzu and Volkswagen.

Oldsmobile and Pontiac have introduced vans, and Mercury will be selling both cars and trucks. Transplant Honda is expected to become a U.S. van manufacturer, too. U.S. truck sales already account for more than one-third of the new-vehicle market. Research by GM shows that 40 percent of U.S. households own at least one truck. A decade ago, the figure was 25 percent.

It's been estimated that nearly a million car buyers have crossed over to buy sport-utilities, pickup trucks or vans. The real growth is expected in compact pickups, vans and sport-utilities.

A time for transplants

Transplants will continue to take an increasing share of production and sales in the United States, according to analysts.

Overcapacity has already begun to surface and will still be around for another 10 years, according to Keller and other consultants who believe transplants will be underbuilding by 1992. Although able to produce two million vehicles, plants will run at 75 to 80 percent capacity to make about 1.5 to 1.6 million vehicles, they say.

The greatest risks are to the Big 3, analysts concur.

Imports from Japan will trend downward, and transplant production will grow from about 10 percent to 15 percent in the next 10 years, Luckey bets.

In the next decade, the Koreans — most probably Hyundai — will be building in the United States. The transplant light-truck area is starting to blossom. Unless there is any sign of the 25 percent tariff disappearing, it makes sense to produce trucks here, Luckey said.

Imports and exports

The import segment, particularly Japanese imports, will trend downward, analysts say. But they will still gain sales at the expense of the Big 3 automakers. According to the University of Michigan's Delphi V study, the largest Japanese companies will grow larger and the smaller sellers will hold their ground.

The import share will rise from 30 percent in 1988 to 35 percent in 1991, according to Campbell, who suggested that the Japanese growth will be in fleet sales and potential conquest sales in mid-America. He said the Big 3 have narrowed the quality gap, but there is still a lag in perception.

Small niches will have to be carved out by the overseas vehicle makers to preserve a place in the U.S. car and light-truck market. Winners will be companies that can excite buyers in the luxury class, too.

Luckey suggested that it will be an interesting opportunity to convince upscale buyers to purchase more trucks. "The Jeep Cherokee and the Range Rover, for example, could appeal to upscale baby boomers. Japanese makers may pursue this segment. An upscale minivan from Honda has been rumored for years," he said.

Import penetration has already peaked and will continue to move downward in the next decade, according to Glantz.

The willingness of various states to subsidize plants means the transplants' share will continue to rise, he said. That will take sales from the import market, too.

Effect on market shares

GM recently said that it intends to capture 37 percent of the U.S. car market in 1990. For the first nine months of 1989, GM held 35.41 percent. Ford Motor Co. was the only one of the Big 3 to gain in share of the car market. It held 22.34 percent in the first three quarters.

In a three- to five-year period, GM will be vulnerable, but its share will probably remain stable, Luckey said. Its share has already slipped several percentage points. Although Chrysler's car share fell to 10.32 percent in the first nine months of 1989, light-truck sales will help it hold its own, Luckey said. Ford will continue to do well because it has established a certain amount of loyalty, analysts said.

The big theme for the next decade will be that the Big 3 will do somewhat better with the truck side of the business. Of course, there will be price increases due to changes in regulations affecting vehicle safety requirements.

Some analysts believe that competition from the current players plus three or four additional competitors in the next decade will break down market shares even further.

Analysts suggest that the Big 3 will take 58 to 63 percent of the U.S. car market by the mid 1990s, compared with 68.07 percent in the first nine months of 1989. By the mid-1990s, Cedergren said, GM will probably hold onto 33.6 percent of the U.S. car market. Ford will keep 20.3 percent, and Chrysler's share will drop to 9.7 percent.

Including captives, their 1988 shares were: GM, 36.11 percent; Ford, 21.63 percent; and Chrysler, 11.25 percent.

Vying with GM for nearly a third of the car market will be all Asian makes. They claimed 25.59 percent of the U.S. market in 1988. The Europeans will remain stable and hold onto 5.0 to 5.5 percent, according to Cedergren.

Foreign nameplate sales, including imports and transplants, will scarf up about 36 percent of the car market in 1995, according to the University of Michigan's Delphi study.

But U.S. carmakers will pair up more with non-U.S. manufacturers in other countries to subcontract assembly and to develop and produce vehicles jointly, according to Keller.

On the other hand, Luckey figures that the German luxury car makers will lose share with the entry of Toyota's Lexus and Nissan's Infiniti. Lexus expects to sell 70,000 to 75,000 luxury cars next year; Infiniti's projections will be similar. That's a good chunk of business, he said.

Most of the analysts believe that those projections may be a little too bullish, considering the competitive nature of the market and the slowdown in the economy. ■

May 1989

NORTH AMERICAN LIGHT- VEHICLE SALES

Year	18 million	16 million	14 million
1990	Good 7.8%	Medium 49.4%	Weak 42.8%
1992	Good 23.4	Medium 61.0	Weak 15.6
1994	Good 33.8	Medium 57.1	Weak 9.1
1996	Good 36.4	Medium 51.9	Weak 11.7
1998	Good 39.0	Medium 54.5	Weak 6.5
2000	Good 48.1	Medium 44.2	Weak 7.7

If a "good" sales year is defined as 18-million new cars and light trucks in the United States and Canada, 16-million is a medium year and 14-million a weak year, what are your expectations for years 1990, 1992, 1994, 1996, 1998 and 2000?

Responses to that question suggest a general leveling off of the overall market in the coming decade, rather than dramatic upward or downward swings. Also indicated is a rate of 1 to 1.5 percent sales growth a year.

Certain market segments are expected to show greater growth than others. Some segments might disappear. New ones may emerge.

As a result, manufacturers will have to target specific market segments, or niches, more accurately and swiftly than ever. They may need to increase marketing and related expenses — such as sales incentives, rebates and lower-cost financing — in order to bolster weak segments, especially during general economic downturns.

To implement aggressive market-share and price strategies while maintaining or improving profits, manufacturers will have to continually sharpen their internal cost structures, and concurrently increase prices based on improving value to customers and moving products upmarket.

AUTOMOTIVE NEWS/JOE WILSSENS

Foreign nameplate sales, including imports and transplants like Nissan, could have 36 percent of the market in 1995.

TOTAL U.S. PASSENGER CAR SALES

(Units in Millions)

	1990	1995	2000
Domestic	6.74	6.80	6.98
Import	3.41	3.78	3.93
Total	10.15	10.58	10.91

The passenger-car market will continue to be a battleground between domestic and import nameplates throughout the next decade.

Reason: The overall market for passenger cars in the United States is a very mature one, and sales are not anticipated to increase by more than 1 percent annually.

Although certain automobile market segments will grow faster, some segments will decline, resulting in weak overall growth.

In mature markets such as the United States, the only way to boost market share is to win customers from competitors.

Price, product differentiation, market responsiveness and merchandising will have to be integrated and executed strategically.

Foreign nameplate sales — including import and transplant — are forecast to increase their market share to 36 percent by 1995.

TOTAL U.S. LIGHT-TRUCK SALES

(Units in Millions)

	1990	1995	2000
Domestic	3.86	4.09	4.10
Import	0.90	0.96	0.94
Total	4.76	5.05	5.04

It is believed the U.S. light-truck market will grow slowly during the 1990s, although at a greater rate than passenger-car sales. This is consistent with maturing of the overall U.S. market, with specific pockets of growth.

Light trucks will continue to provide a flexible, functional alternative to passenger cars for primary transportation. Much of the growth will be within the gray area of vehicle classification between passenger cars and light trucks, such as multi-purpose passenger vans and sport-utility vehicles.

Imports are seen as being a competitive threat to the domestic Big 3, adding about 2 points of share from 1988 to 2000.

Charts and projections were provided by the University of Michigan Delphi V study.

TRADITIONAL DOMESTIC PASSENGER CAR SALES

(Units in Millions)

Production source	1990	1995	2000
General Motors	3.62	3.66	3.70
Domestic produced	3.30	3.30	3.30
Captive import	0.19	0.21	0.25
Transplant	0.13	0.15	0.15
Ford	2.11	2.12	2.28
Domestic produced	1.92	1.90	1.98
Captive import	0.09	0.12	0.15
Transplant	0.10	0.10	0.15
Chrysler	1.01	1.00	1.00
Domestic produced	0.81	0.80	0.80
Captive import	0.12	0.10	0.10
Transplant	0.08	0.10	0.10

A decline in passenger-car market penetration by at least two of the traditional U.S. Big Three auto companies may take place during the next decade.

General Motors' share of the new-car market in the United States may drop below 36 percent in 1995 and below 34 percent in 2000.

The Chrysler Motors Corp. share is seen falling one-half percentage point over the decade.

Ford Motor Co.'s new-car market share may stay about the same, or possibly rise a fraction of a percentage point.

A drop in sales share portends a corresponding drop in production by the traditional U.S. Big 3. Their slack would be taken up by increased output of transnational plants in the U.S., and increased outsourcing of small-vehicle production by the Big 3 domestics to overseas affiliates.

This would have a major impact on U.S.-based suppliers, since transplants and captive imports have significantly less domestic-supplier content than Big 3 brands.

IMPORT PASSENGER CAR SALES

(Units in Millions)

Production source	1990	1995	2000
Honda	0.80	0.93	1.00
Import	0.40	0.40	0.40
Transplant	0.40	0.53	0.60
Toyota	0.65	0.75	0.81
Import	0.50	0.50	0.50
Transplant	0.20	0.25	0.31
Nissan	0.52	0.56	0.55
Import	0.40	0.40	0.35
Transplant	0.12	0.16	0.20
Hyundai	0.26	0.31	0.33
Import	0.26	0.25	0.25
Transplant	0.00	0.06	0.08
Mazda	0.24	0.26	0.25
Import	0.15	0.16	0.15
Transplant	0.09	0.10	0.10
Subaru	0.16	0.15	0.14
Import	0.15	0.14	0.14
Transplant	0.01	0.01	0.00
VW	0.15	0.15	0.15
Import	0.15	0.15	0.15
Transplant	0.00	0.00	0.00
Volvo	0.10	0.10	0.10
Import	0.10	0.10	0.10
Transplant	0.00	0.00	0.00
Mercedes	0.09	0.10	0.10
Import	0.09	0.10	0.10
Transplant	0.00	0.00	0.00
BMW	0.09	0.09	0.10
Import	0.09	0.09	0.10
Transplant	0.00	0.00	0.00
Mitsubishi	0.09	0.09	0.10
Import	0.06	0.05	0.05
Transplant	0.03	0.04	0.05
Saab	0.05	0.05	0.05
Import	0.05	0.05	0.05
Transplant	0.00	0.00	0.00
Other	0.21	0.24	0.25
Import	0.21	0.24	0.25
Transplant	0.00	0.00	0.00

Big-volume importers are expected to become bigger, small-volume importers will hold their ground or climb slightly, and medium-size importers will maintain present sales levels or decline.

Also expected are increases in North American vehicle sourcing by the largest companies selling foreign makes here.

TRADITIONAL DOMESTIC LIGHT-TRUCK SALES

(Units in Millions)

Production source	1990	1995	2000
General Motors	1.50	1.60	1.60
Domestic produced	1.50	1.60	1.60
Captive import	0.00	0.00	0.00
Transplant	0.00	0.00	0.00
Ford	1.45	1.50	1.50
Domestic produced	1.45	1.50	1.50
Captive import	0.00	0.00	0.00

Domestic produced	0.82	0.90	0.90
Captive import	0.09	0.09	0.10
Transplant	0.00	0.00	0.00

The light-truck market will be a hard-fought battleground into the year 2000.

Market growth during the 1980s has attracted a flock of new corporate entries and individual nameplates.

Sales battles will be waged within individual light-truck segments, with the likelihood that the passenger-car marketing and incentive wars of the 1980s will be emulated in the light-truck market of the 1990s.

From a market share perspective, the traditional U.S. Big 3 should remain competitive against imports and foreign transplants.

Popular opinion is that Chrysler will make the biggest share gains in the next decade. Its acquisition of Jeep vehicle operations is seen as a competitive plus. Chrysler's annual light-truck sales are forecast to grow to 1 million units by 2000.

General Motors is expected to maintain its share of the domestic market into year 2000. GM annual sales are forecast at 1.6 million units by 2000.

Ford's annual sales are expected to reach 1.5 million units by 2000.

IMPORT LIGHT-TRUCK SALES

(Units in Millions)

Production source	1990	1995	2700

Import	0.01	0.01	0.01
Transplant	0.00	0.00	0.00
Other	0.00	0.00	0.00
Import	0.00	0.00	0.00
Transplant	0.00	0.00	0.00

Competitive pressures on foreign nameplates in the light-truck market are likely to remain strong in the 1990s.

It is suggested that the light-truck import market will follow a pattern similar to imported passenger cars: Large importers will become larger, while medium and small companies will struggle to maintain market share.

As with passenger cars, the Japanese are seen as putting their product-development-time advantage to use to seek out market niches and introduce products into emerging light-truck segments. Companies will expand their light-truck offerings into new segments or enter the light-truck market for the first time.

PERCENT OF TOTAL MARKET

Body type	1995	2000
4-door sedan	54%	54%
4-door hatchback	6	6
4-door station wagon	6	6
Subtotal	66%	66%
2-door sedan	21	21
2-door hatchback	12	12
Convertible	1	1
Subtotal	34%	34%

The mix of U.S. passenger-car body types will remain very much the same in the 1990s, as forecasters see it.

Four-door sedans will continue to be the most favored design, followed by two-door sedans, two-door hatchbacks, four-door hatchbacks/four-door station wagons (tie) and convertibles.

While body-style preferences remain stable, there will be changes in powertrain offerings as a result of shifts in consumer demographics and tastes. High-performance powertrains, once the domain of sleek two-door models, are finding their way into four-door sedans and station wagons.

NORTH AMERICAN PASSENGER CAR PRODUCTION CAPACITY

(Units in Millions)

Facilities	Current Estimate	1995	2000
Traditional domestic	9.3	8.6	8.5
Foreign-owned	1.2	2.1	2.5

Forecasts of passenger-car production capacity in the United States will continue to be a subject of speculation and debate in the 1990s.

Predictions as the decade gets under way are that the coming five to 10 years will see important shifts in North American car-production capacity, in terms of both industry and individual company volumes.

According to forecasters, the share of capacity by traditional U.S. Big 3 automakers will narrow from 89 percent in 1988 to 80 percent in 1995 and 77 percent in year 2000.

This trend suggests that the impact of transplant manufacturing and assembly operations in the United States will continue to be an issue in the years ahead, not only among Big 3 automakers, but also their supplier bases, labor unions, governments at all levels and other interested parties.

The increase in transplant share of production capacity is also an indication of greater participation of manufacturing in the United States by foreign supplier companies, not only with transplant customers, but with traditional Big 3 automakers as well.

It appears that the Big 3 will downscale their passenger-car production capacity over the next 10 years by approximately 10 percent, while foreign companies increase theirs collectively by more than 100 percent.

As a result, the grand total of North American capacity is expected to increase about 5 percent during the 1990s.

Given an estimated total North American market growth rate of 1.5 percent a year in the 1990s, the overall passenger-car market should expand by approximately 20 percent during the years 1989-2000, using a compounded rate over that time span.

U.S. PASSENGER CAR MARKET SEGMENTATION

(Units in Thousands)

Year/Segment	Domestic	Import
1990		
Subcompact, regular	977	1,329
Subcompact, specialty	78	86
Compact, regular	914	700
Compact, specialty	1,254	550
Intermediate, regular	1,486	300
Intermediate, specialty	538	100
Full size	900	0
Luxury, regular	489	215
Luxury, specialty	154	70
TOTAL	6,770	3,350
1995		
Subcompact, regular	1,000	1,400
Subcompact, specialty	80	100
Compact, regular	950	700
Compact, specialty	1,300	594
Intermediate, regular	1,530	300
Intermediate, specialty	550	123
Full size	900	0
Luxury, regular	500	250
Luxury, specialty	170	86
TOTAL	6,980	3,553
2000		
Subcompact, regular	850	1,400
Subcompact, specialty	99	100
Compact, regular	980	720
Compact, specialty	1,350	600
Intermediate, regular	1,530	320
Intermediate, specialty	600	150
Full size	950	0
Luxury, regular	500	250
Luxury, specialty	180	100
TOTAL	6,949	3,640

Overall market segmentation is not likely to change dramatically.

The outlook is for a slight "richening" of the market, with cars shifting from regular into higher-priced specialty classes.

The domestic Big 3 are seen as maintaining dominance in the full-size segment but losing share in intermediate and luxury segments.

U.S. LIGHT-TRUCK MARKET SEGMENTATION

(Units in Thousands)

Year/segment	Domestic	Import
1990		
Compact pickup	675	600
Regular pickup	1,300	0
Compact van	700	55
Regular van	500	10

TOTAL	3,905	878
1995		
Compact pickup	700	625
Regular pickup	1,330	0
Compact van	789	80
Regular van	500	10
Compact utility	550	220
Regular utility	210	3
TOTAL	4,079	938
2000		
Compact pickup	710	630
Regular pickup	1,350	0
Compact van	845	100
Regular van	500	10
Compact utility	575	225
Regular utility	211	3
TOTAL	4,191	968

Forecasts indicate there will be no dramatic shifts in the light-truck segment of the market in the 1990s.

The trend from regular van and utility vehicles toward compact-size vehicles will continue. However, this appears to be a swing of only 2 to 3 percentage points during the next 10 years.

One trend that shows a good chance of developing is establishment of imported vehicles — both Asian and European — in the regular van and utility markets.

Japanese manufacturers should not be discounted from complete and competitive participation in the U.S. light-truck market.

WORLDWIDE PASSENGER CAR PRODUCTION

(Units in Millions)

Manufacturer	1990	1995	2000
GM	6.5	6.5	6.5
Ford	4.0	4.1	4.2

Porsche	0.05	0.05	0.05
Other	0.05	0.08	0.1

As engineering and manufacturing technology is transferred throughout the world, more countries and more new manufacturers will launch or accelerate assembly operations.

As a result, comparatively rapid growth is forecast for newly industrialized countries such as the the Soviet Union, the People's Republic of China and Taiwan.

At the same time, steady growth of automotive markets is expected to take place in developing industrialized countries, as they establish their own automotive industries.

WORLD TRUCK AND BUS PRODUCTION

(Units in Millions)

Manufacturer	1990	1995	2000
GM	1.90	2.00	2.10
Ford	1.90	1.90	2.00
Toyota	1.00	1.10	1.10
Chrysler/Jeep	0.80	0.80	0.90
Nissan	0.70	0.70	0.70

Kia	0.10	0.10	0.10
Navistar	0.08	0.08	0.08
Hino	0.06	0.06	0.06

The world outlook for truck and bus production is one of slow growth at best in the 1990s.

Forecasters see no dramatic shifts among the world's major truck producers. However, Chrysler Motors, as a result of its acquisition of the Jeep vehicle business, is expected to enjoy the biggest volume increase on a percentage basis. Gains are also forecast for Toyota.

General Motors and Ford Motor Co. are seen as maintaining their industry-leading volume positions throughout the next decade.

Maintaining their production volumes through the decade: Nissan, Mitsubishi, Suzuki, Daihatsu, Mazda, Isuzu, Fuji, Renault, Peugeot-Citroen, Daimler-Benz, Honda, Fiat, Volkswagen, Rover Group, Kia, Navistar and Hino.

Source for tables and projections is the University of Michigan's Delphi V report.

A time for decision on automation

Spend billions more or use that money for other purposes?

The 1980s have seen major commitments by the U.S. motor vehicle industry, in terms of both capital investment and effort, in the area of programmable automated manufacturing.

Led in particular by the pervasive campaign of General Motors to re-automate the majority of its facilities, the auto industry as a whole has invested tens of billions of dollars in new automation equipment and related plant expenditures since 1979. The goals of that enormous outlay have been stated many times in a variety of ways. But the overriding purpose has been constant: To achieve world-class quality levels in U.S.-based motor-vehicle manufacturing and retake the competitive initiative in at least U.S. domestic, if not world, vehicle markets.

Whether the investment in programmable automated manufacturing has, even initially, paid off is a major question throughout the industry. The bulk of the outlays have been made by the original-equipment manufacturers and have been concentrated in robotics applications such as vehicle body, stamping, welding and painting, material handling and relatively simple applications of computer-assisted design.

The industry now faces a decision regarding a new wave of implementation in the 1990s. Should additional investments be made in advanced manufacturing technology (billions more) that will provide the needed integration and applications to make the initial investments pay off? Or should capital spending in the next 10 years be concentrated on product and market development and acquisitions?

Major criticisms of automation investment to date include charges that the new equipment was installed without regard to the requirements of new product, that it has contributed little to the flexibility of operations, that it costs too much in an environment of shifting production schedules and that it does not link up adequately to the needs of product designers or suppliers.

Other technical reservations include the reliability and compatibility of a bewildering variety of programmable systems that are rarely integrated in a manner that allows the achievement of the performance goals set out with such initial optimism in the early 1980s.

On the other hand, proponents of programmable automated manufacturing have underscored the impressive productivity gains made in the applications where it has been fully adopted. They point out that the implementation of the new automation is far from over. Although the "new" applications may indeed resemble the dedicated automation technologies of the past, there are important existing and potential differences.

The new automation is primarily electronic both in terms of its power source and controlling mechanisms. It is also truly programmable — at least potentially — and can be adjusted quickly for new applications, especially in comparison to older manual technologies.

The major remaining features required to achieve the full promise of programmable automated manufacturing involve the integration of current technologies with each other (computer integrated manufacturing), the development of flexible machining capacity in response to market developments and the critical linking of flexible manufacturing to the design and procurement process or computer-assisted design/computer-assisted manufacturing.

Pressing future developments that obviate the need for computer-assisted design/computer-assisted manufacturing include the following:

- The proliferation of distinct vehicle market segments, each requiring dedicated platforms, drivetrains and other components and frequently using different materials.

Sales volumes for the new vehicle markets will be considerably smaller than was the case for the older, broader markets. The ramifications of the "nichification" of markets for the scale and structure of motor-vehicle manufacturing are numerous and serious indeed for U.S. producers.

Current facilities can survive in the future only by attaining flexibility in production or the ability to produce a variety of components or vehicles of one type or many types with the same equipment and labor force at efficient cost levels.

- The life of a typical automotive design will be considerably shorter as "design turnover" increases. It has been estimated that a typical major Japanese competitor can develop an essentially new platform vehicle in three to four years. Since Big 3 platforms are expected to last eight to nine years, the competition can match any U.S. investment at a lag of only three years.

Faster design turnover also means more rapid response to changes in consumer preferences for components and vehicles. Process technology that can be set up quickly or converted to new programs/designs can save literally billions of dollars in tooling and other costs as well as reduce the critical leadtime to change in the market.

- Although the gap between U.S. and Japanese labor costs and productivity continues to shrink, new competitive challenges based primarily on drastically lower levels of labor compensation in newly industrialized economies with developing auto manufacturing sectors are emerging and will emerge in the 1990s.

To the extent that U.S. production remains onshore, continued advances in labor productivity and unit labor cost must be achieved to maintain competitiveness. Productivity increases must be effected at every level in the integrated stages of auto manufacturing. And they must necessarily be attained by suppliers as well as OEMs if the new technology is to have any effect on overall vehicle cost.

The proportion of auto manufacturing facilities that are using or plan to use computer-assisted design/computer-assisted manufacturing in operations may not be impressive. The Bureau of Census of the U.S. Department of Commerce recently completed a survey of 10,000 U.S. manufacturing establishments on their current and future use of programmable automation.

Table 1 contains select results for the portion of the study dealing with establishments in transportation equipment manufacturing (including aircraft plants).

Although 58 percent of facilities expected to be using computer numerical control equipment and almost 43 percent expected to be using computer assisted design or engineering within within five years, only 37 percent expected to be using "computer-aided design output to control manufacturing machines" in the same period.

Only 30 percent of responding establishments reported the current use or planned use within five years of "computer aided design output in procurement activities."

In other words, fewer than two-thirds of transportation equipment manufacturing facilities have any plans or expectations concerning the use of computer-assisted design/computer-assisted manufacturing in the foreseeable future.

The potential effect of computer-assisted design/computer-assisted manufacturing on operational efficiency may be great indeed. This author recently completed a manufacturing study for the Economic Development Administration of the U.S. Department of Commerce regarding the productivity effects of five types of programmable automation in five U.S. manufacturing industries.

Of the 110 complete cases collected in the study, 37 were of robotics use in U.S. assembly, component and stamping facilities. That subset of auto robotics users is compared to 35 computer numerical control equipment cases in the tool and die industry (makers of automotive dies and models for the most part), 20 cases of controller use in the iron and steel foundry products industry and 19 users of computer-assisted engineering in the industrial electrical equipment industry.

In comparing major subsamples on the effectiveness of the new technology, the most striking comparison was between automotive robotics and computer numerical control equipment use in tool and die shops. The median increase in the throughput rate (including setup and maintenance) for a robotics application in a motor vehicle plant was zero percent.

In other words, robotics had no appreciable effect on the auto plant's ability to produce. In contrast, job shops that replaced older manual machine tools with computer numerical control equipment reported a median increase in the throughput rate of 55 percent. When the computer numerical control equipment was directly linked to computer-assisted design, the effective median increase was an astounding 308 percent.

In other words, the same facility could then produce three times the level of output as before or, since the major benefit was a drastic reduction in setup time, handle three times the product diversity as with older, manual equipment. The effect of that technical leap connected to computer-assisted design/computer numerical control equipment, a form of computer-assisted design/computer-assisted manufacturing, is to reduce capital costs by almost two-thirds in a diverse product mix environment.

Automotive robotics did not achieve that level of effectiveness, the case studies reported, either because the technology was implemented as dedicated automation or because the flexibility of the equipment was wasted. Even when the equipment was capable of flexibility, it was not connected to design or was not given a range of products to produce.

Robotics certainly affected the level of labor use in automotive applications. Automotive robotics users experienced a median increase in labor productivity of almost 390 percent and a median reduction in unit labor cost of 83 percent. Those results exceed those for straight computer numerical control equipment in machining shops, yet are actually surpassed by computer-assisted design/computer numerical control on both counts.

It should be remembered that labor cost reductions at any stage of auto production quickly reach an effective limit. For example, if all labor use were eliminated in the final assembly of motor vehicles, unit costs would fall less than 12 percent. Computer-assisted design/computer-assisted manufacturing's special promise lies in its potential to reduce capital, inventory and design costs as well as improve the effectiveness of the procurement of components and parts from independent suppliers.

The special challenge of the 1990s is to make automotive automation work in the same fashion as the computer-assisted design/computer numerical control cases described above. The most pressing needs are in component manufacturing plants that perform large-scale machining operations. Faced with a wider range of transmissions, engines and other systems in the 1990s, those plants must either acquire effective flexible machining through computer-assisted design/computer-assisted manufacturing or watch many of their operations be outsourced to smaller independent facilities.

The transition to effective computer-assisted design/computer-assisted manufacturing in the auto industry of the 1990s carries a high cost and much risk. Money for investment will be borrowed at the expense of product development programs. Full-scale integration will be difficult since every component of the process must work perfectly in unison, as a number of model "factories of the future" have discovered.

Suppliers must cooperate and participate at every stage of the production chain or the benefits will be limited. The necessary training and cooperation of labor must also be present. It has also been pointed out that the Japanese do not rely to any great extent on that form of technology. Automation is a lagging alternative for them, the last options to be implemented.

The Japanese style of product diversity is characterized by high organizational and financial commitments to product innovation within well-defined product areas. Whether the computer-assisted design/computer-assisted manufacturing alternative represents another American style, simple "techno-fix" to a complex problem or an actual climb to a higher plateau of technical efficiency is a question that will certainly be answered in the decade to come. ■

Author Sean P. McAlinden is an associate research scientist, Office for the Study of Automotive Transportation/Transportation Research Institute, University of Michigan.

ESTIMATES OF TECHNOLOGY USE

Automotive technology	Percent using now	Percent planning to use in 5 years	Total percent using in 5 years
CAD/CAE	39.9	18.2	58.1
Pick and Place Robotics	10.4	11.4	21.8

'Threshold' of revolution

Technology, environmental concerns affect auto materials

The last decade has been a period of profound transition for the North American automotive industry. Tough international competition and fast-paced technical developments, coupled with challenging energy and environmental concerns, have fostered significant changes in our approach to selecting automotive materials. Industry planners are confronted by a host of critical issues as they choose materials for their future products. Market forces, commodity prices, manufacturability, design experience, existing facilities and new technologies are just a few of the considerations influencing these decisions. There is little question that we are on the threshold of an automotive materials revolution.

Even as new materials enter the picture, there are dramatic improvements in the production and processing of the more traditional automotive materials. One of the hallmarks of this revolution is the literally ferocious competition between candidate materials in a host of applications, ranging from plastic versus steel in body panels to aluminum versus copper in radiators. Over the long term, few components are restricted to a given material, and the sheer size and potential of the automotive market insures that today's winners cannot rest comfortably, assured that their current success will continue.

While it is difficult to predict with certainty the future of automotive materials, the University of Michigan Delphi Forecast provides a degree of insight into industry experts' beliefs about future materials. The Delphi method is a systematic, iterating method of forecasting based on independent input from a panel of [illegible]. We carefully select panelists from both the automotive manufacturers and their suppliers. The current Delphi V Forecast, the fifth in our series of biennial studies of automotive trends in technology, materials and markets, provides a consensus view of the future to the year 2000 through the eyes of over 300 industry leaders. We have delayed publication of the Materials volume of Delphi V to permit consideration of the effects of possible increases in CAFE mpg requirements on future materials, so all data presented here are from the general Technology forecast volume.

The materials future promises to be exciting and, in some respects, quite different from that envisioned by forecasts made earlier in the decade. A significant part of this change in expectations can be attributed to a substantial lowering of anticipations for future energy prices over the course of the U-M Delphi surveys. Fuel prices, based on the current Delphi survey, are expected to increase modestly over the next decade, and panelists have dramatically lowered their expectations of future fuel prices compared to earlier surveys. This sets the stage for shifts in many material forecasts.

In addition to fuel prices, panelists have changed their expectations for future passenger car weight and size. The consensus view is that downsizing has largely run its course and that, unless CAFE is increased, future weight reduction will be very modest. The Delphi panelists believe that if future fuel economy requirements are increased, the most significant areas for efficiency improvement are the powertrain, followed by weight reduction. Concerning total vehicle weight, our vision of the future has changed rather sharply in a fairly brief period of time. Steel will continue as the dominant automotive material, but there will be substantial use of cast iron, plastics in a variety of forms, and aluminum. Future increases in CAFE standards would probably increase both plastics and aluminum use, at the likely expense of steel and cast iron.

Authors David E. Cole and Richard L. Doyle work for the Office for the Study of Automotive Transportation, University of Michigan.

Body/Chassis

The car body is perhaps the major arena of the plastics versus steel competition. With minor exceptions, exterior panels of North American-produced cars have traditionally been made from low carbon steel. This is likely to continue, despite the introduction of several plastic-intensive vehicles such as GM's Corvette and APV; however, various polymer-based materials are expected to begin making significant inroads, particularly in the non-integrated body panels. While growth in plastics is significant, it is considerably less than envisioned just two years ago in our Delphi IV forecast. This may be partially due to slower than anticipated development in plastics and plastics processing technology, but is probably more due to the considerable progress made by the steel and automotive industries in recent years, including improvements in quality, product design, corrosion protection, die making and stamping plant operations.

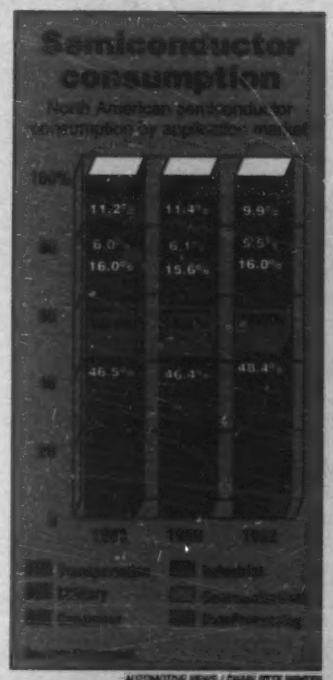
The forecast calls for the integral body frame passenger car structure to continue its dominance in the upcoming decade, although a small but significant fraction of vehicles will likely use separate body frame and space frame designs. Steel, in the opinion of our Delphi panelists, will be used in most future body/frame structures through the year 2000, although the role of both aluminum and polymer based composites is expected to expand. Since aluminum and composites are both near the beginning of their learning curves, intense competition will continue and expand. Material selection decisions in both the body exterior and structural areas will continue to depend on a host of actors including commodity prices, developments in processing technology, design knowledge, existing capacity, supply considerations, field repair, recycling vehicle systems issues, quality considerations, regulatory trends and customer perception of value.

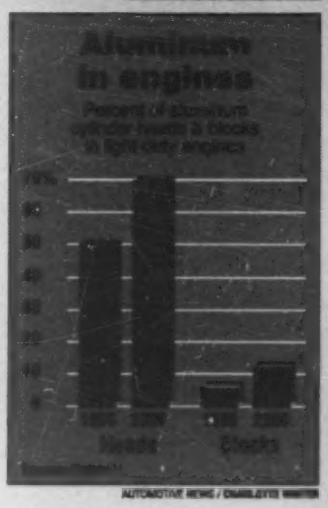
Powertrain

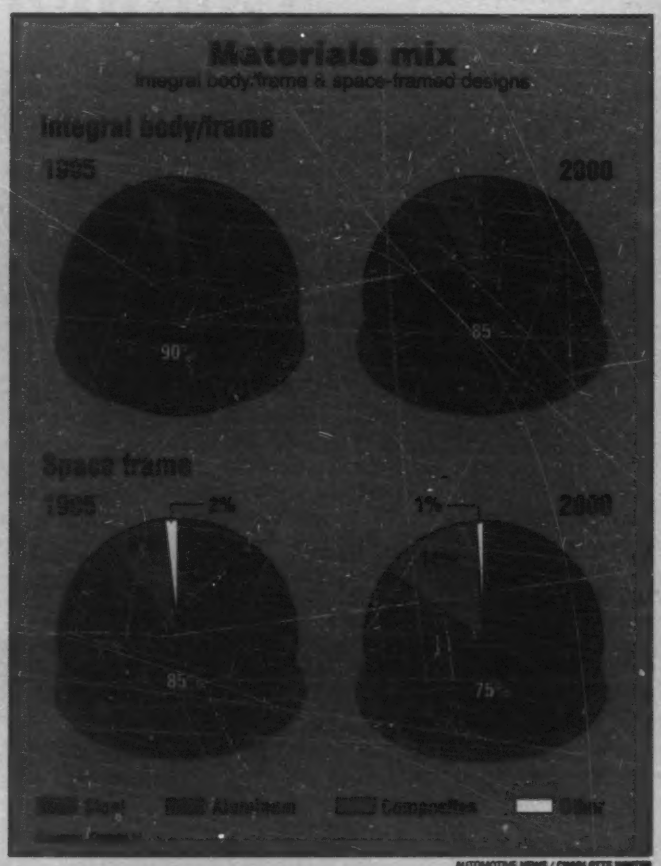
A number of exciting technical and material developments are anticipated in the engine and drivetrain. Increased demands for performance, fuel economy, reliability, durability and overall "World Class" cost and quality are driving engine designers to improve the entire powertrain. Panelists anticipate the fundamental redesign of a major fraction of North American-produced engines over the next decade. Manufacturing precision is greatly increasing, and a significant number of future powertrains will employ high-tech features such as double overhead cams (DOHC), 4-valve cylinders and integrated, electronic engine/transmission control. Aluminum use is expected to expand significantly in cylinder heads and somewhat more modestly in engine blocks. Panelists expect most aluminum blocks to continue use of cast-iron sleeves.

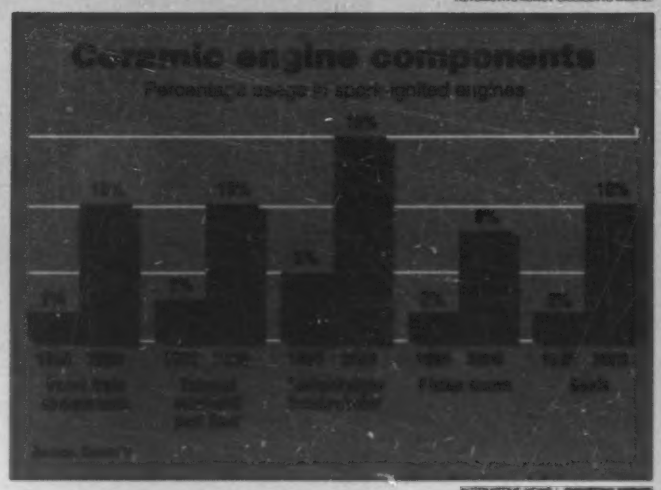
Panelists expect that polymers will achieve modest but important application in several engine components, while ceramic materials appear ready to move from the research laboratory into tomorrow's engines in a few selected applications. However, the complete ceramic engine is not yet on the near-term, or perhaps even the long-term, horizon. Although the primary reasons for ceramic applications are mass and friction reduction and the control of engine heat, piece-cost, manufacturing considerations and reliability concerns remain major impediments to its increased application. A tightening of fuel economy and emission standards might well spur the further development of ceramic technology.

The choice of traditional materials for most engine components is far from fixed over the next decade in light of the growing emphasis on mass and friction reduction, particularly in moving parts. A number of technologies are competing for material selectors' attention.









INTEGRATED CIRCUIT CONSUMPTION
(millions of dollars)

Market	1990	1995	2002
Data Processing	6,805.8	7,491.8	11,417.8
Communications	1,864.2	2,194.1	2,937.8
Industrial	2,001.6	2,158.8	3,324.5
Consumer	750.2	843.9	1,114.1
Military	1,442.9	1,650.4	2,109.2
Transportation	653.3	707.9	1,202.6
Total	13,518.0	14,957.0	22,105.8

SOURCE: Dataquest

Besides ceramics, metal matrix composites is an emerging material technology with exciting potential. While still in the early stages of development, recent progress in this technology has been significant.

This list of key representative engine components and candidate materials illustrates the broad scope of the competition:

Connecting Rod: Cast iron, steel, aluminum metal matrix composites.

Intake Manifold: Cast iron, aluminum, polymer/polymer-based composites, magnesium.

Oil Pan: Steel, aluminum, polymers, metal-plastic laminates, magnesium.

Corrosion

Significant progress is being made in corrosion protection. One measure of this is in the number of years that elapse before corrosion penetrates exterior panels. The Delphi V panelists forecast an elapsed time of eight years by 1995, lengthening to 10 years by the year 2000. Much of this progress can be attributed to substantial increases in steel's corrosion resistance, due, in part, to the use of a two-side coated, galvanized steels, improved paint and ▶

scaling systems, better design, and enhanced manufacturing process control.

Recyclability

The issues of solid waste and materials recyclability are becoming more important in the design, production, and ultimate retirement and disposal of the vehicle. While cost remains an impediment to increased use of plastics, environmental concerns also pose significant barriers. A decisive majority of Delphi V panelists (65 percent) believe it essential that the automotive industry develop or improve the recyclability or reclaimability of its products. These issues should be considered as an integral part of the vehicle design process. Furthermore, a significant 16 percent of the panelists expect some form of legislative activity enforcing recyclability/reclaimability within the next decade. We would hope the industry will seize the initiative on this issue. There does not appear to be a fundamental recycling problem for present and future automotive materials, but considerable effort is required on the part of some segments of the industry to meet this developing challenge.

Summary

It is clear that the automotive materials area is experiencing revolutionary development and progress. As the industry sharpens its focus on total customer satisfaction, materials will play an increasingly important role. There appears to be lessened enthusiasm for technological development for technology's sake, and more emphasis on value delivered. New and developing automotive materials are achieving a level of application that ensures the production of passenger cars that could only have been a dream a few years ago.

This is not a time for complacency. The automotive materials industry faces a future of not only unprecedented challenge, but also significant opportunity. As most of the world's automotive manufacturers achieve true parity in terms of traditional customer value factors, material-related issues may tip the balance in the customer's selection.

Regardless of who the winners and losers are in the "Materials Olympics," the true benefactors of the competition will be the consumer. ■

AUTOMOTIVE NEWS / CHARLOTTE WATSON

In electronics, the word is 'smart'

New chips 'sense,' and they take action on what they've sensed

Smart power. Smart chips.

Those are among the most exciting new phrases in the lexicon of emerging automotive electronics technology these days.

They're being heard in descriptions of chips used in such hot items as automatic suspensions, traction control systems and other real, promised or pipe-dream wonders of the world of automotive electronics.

In virtually all prognostications about the world of automotive electronics in the 1990s and beyond, smart chips serve a keystone function.

A smart chip is made up of sensing components and components that take action based on what's been sensed.

Because smart chips are available, electronics engineers have been able to trim dramatically the size of electronic devices to fit them into the high-cost real estate under instrument panels and in black boxes under the hood. Also, in electronics, smallness has come to be equated with low cost, reliability and speed.

"It's become a term too loosely used, but 'smart power' does catch the sense of something very important," said Edward Whitaker, staff engineer, advanced development at Delco Electronics Corp. in Kokomo, Ind., part of GM Hughes Electronics Corp.

"Smart power, although it's loosely defined, means combining linear and digital and power — combining different circuit functions and different technologies on the same chip of silicon. It's power plus control. But there's a million varieties, depending on manufacture, because they all have different approaches," he said.

"In the old days, we'd buy one of these, one of those and one of them and maybe drive a motor.

"When you put all those functions on one piece of silicon, you have what's referred to as smart power.

"With smart power, you save space. You make smaller systems possible because you don't need as many components. You also can do things you couldn't do before. For instance, with something like a power mirror, there isn't room for a big box. You need one chip," Whitaker said.

"There absolutely is an increase in reliability. You don't have all the interconnections, the solder connections, all the problems of sorting, handling and inventory."

Quality improves when smart chips are manufactured because only one chip is handled and bonded. There may be about eight critical masking steps involved in the making of a current chip (layers and diffusions) while smart power is more complex and might call for 18 critical levels, he said. He explained how smart devices have evolved as electronics in general have advanced.

"A typical system through the '60s, the '70s and into the '80s was discrete," he said. "That is, it had one specific function. Such a system might consist of a logic circuit that provided a signal to a tightly packaged device that was made to switch a particular amount of current.

"For example, the logic circuit would say, 'turn on,' 'turn off' or 'something's not right.' The second device, a transistor, would do the switching ordered by the logic circuit. Thus, there were two different parts making up one system.

"To make up a system, engineers might take a bipolar integrated circuit for linear functions and a MOS chip for digital functions and then add a power device that would deliver amps and drive a motor," Whitaker said. Thus, three different types of parts made up a system.

Smart power will allow engineers to build controls into the devices they control.

For example, the control chip for a windshield wiper motor can be mounted directly on the motor instead of nearby. "If you have one chip, you can put it in the motor. If you have to build it up of a number of components, it gets pretty big and won't fit," Whitaker said.

He said the same principles hold true in multiplexing, a system of sending power for more than one system over the same electrical wires.

"When you have a wiring harness in the door, you don't want 52 wires running into the door; you want ... You put some electronics in the door that get a signal and open the door locks or open the windows. The box can't be too big. You want something that's small and light. If you can put it all on one chip it can go right in the door," Whitaker said.

Toshiba of Japan recently completed development work on an intelligent power switch that allows a microprocessor to drive motors, solenoids, lamps and other loads directly. The switch contains diagnostic functions and also has built-in overload protection.

Chrysler Motors is using a smart chip in what it calls an "electronic traffic cop" for the advanced vehicle data communications network in the Chrysler New Yorker and Dodge Dynasty luxury models.

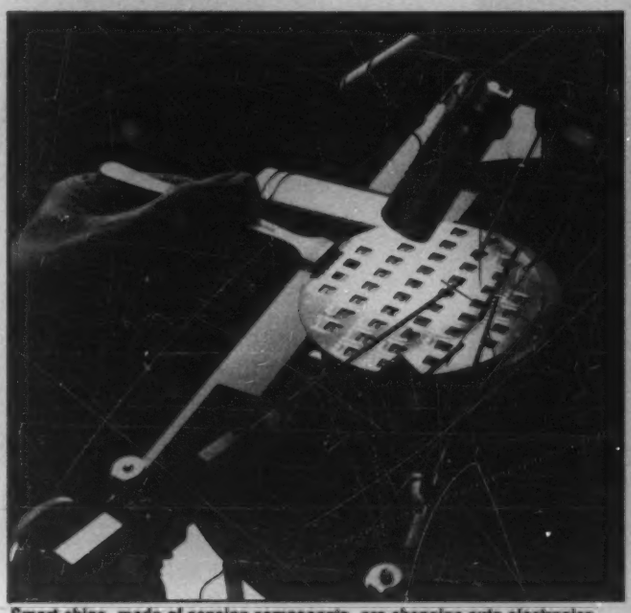
A chip is the heart of the multiplex system that directs the flow of data among a network of microcomputers. The chip, put in place initially in the 1988 models, is the first in the industry that met SAE requirements for data communications multiplexing, Chrysler Motors said.

In its role as a "traffic cop," one of the chips is installed in each of the microcomputers used in the New Yorker and Dynasty models. It allows the microcomputer to share information and assign priorities to messages seeking to access the vehicle's data network.

Called the Chrysler Collision Detection Data Network, the system interconnects the engine controller, body computer, overhead console display, trip computer and engine compartment sensor modules. It uses single twisted pairs of wire instead of dedicated pairs of wires. Without the system, dedicated wires would be required to connect each module or computer to every other module or computer.

The Cadillac Allante includes a small amount of multiplexing of the hybrid type rather than smart power. A hybrid assembly usually consists of a ceramic substrate on which conductors and resistors are printed and on which chips are mounted and connected, Whitaker said.

Candidates for application of smart chips include anything that has a motor or a solenoid, Whitaker said. Those possibilities range from fuel injector drivers to solenoids to lock the trunk and electric motors to raise a car's windows or antenna or move its seats.



Smart chips, made of sensing components, are changing auto electronics.

"Not every situation calls for smart power," Whitaker cautioned. "Sophisticated technology is required. It can be expensive. And, sometimes you shouldn't try to put everything on one chip. Systems designers have the option in partitioning a system to use multiple chip solutions or single-chip solutions.

"The biggest thing we're finding is that we are more frequently merging technologies on a chip. That's another merging of technologies. We get more done on one piece of silicon.

"We used to build systems with 1,000 transistors on a circuit board, and there was a specific reliability of that product. If you put all those transistors on one chip, there is a massive improvement in reliability because it's all made with automation," he said.

"The biggest problem we have is convincing people that the hurdles to overcome and the difficulties in getting the job done are worth it. We're almost in a situation like the one Thomas Edison found himself in when he invented the light bulb. There were no generators in cities, no power stations, and everyone had gas piped right into his home."

Whitaker continued, "Multiplexing on a small scale is like that. There are traditional ways that work well. Careful consideration and planning are essential in deciding to use a new technology. For an example of a good candidate for multiplexing, look at a car door that today might have 50 or more wires running into it. Multiplexing, in this case, would consist of a master computer with a ground wire, a signal wire and a control wire routed around the car.

"Instead of 50 wires running into each door, there would be three. A smart circuit would connect to the signal wire and the chip would drive various loads like a lock, motor, cigaret lighter, crank or lamp."

George D. Aravosis, immediate past president of SAE and director of new technology development for Navistar International Transportation Corp., believes smart power chips are on the way to commercialization.

He said, "Even though we know a lot more than we did in the early 1970s, the commercial vehicle environment, which strongly influences successful application of electronic systems, encompasses a wide range of environmental conditions.

"Development of multiple wiring systems with modules containing smart power switches that combine a high-current electronic switch with control logic circuitry in one small package will aid in this area. Such chips are capable of switching large amounts of DC current using an extremely low control current," he said.

"The smart switch can replace numerous conventional electrical system components. With fewer electrical components, the overall reliability of the truck improves. The built-in logic circuitry of the smart switch provides an output that can be used to diagnose problems in the electrical system. The diagnostic capability offered by the smart switch means a vehicle that is easier to service," he explained.

Aravosis also said an electronic dash with real-time feedback is needed for owners/operators/drivers. On-board diagnostic devices for engines and brakes would assist in self-maintenance practices. The payback from those information devices is knowing where the money goes and showing areas of potential savings.

Many fleet operators and owners feel that if trucks are designed and built correctly in the first place, they can get 600,000 miles from the truck before major problems will occur, he said. Such systems may move them closer to their million-mile-truck goal.

Timothy D. Leuliette, president of Siemens-Bendix Automotive Electronics, said recently, "Exciting new smart sensors are being developed in our new Integrated Silicon Sensor Laboratory in Newport News, Va.

"These silicon sensors will be capable of measuring a variety of automotive parameters and will close the technology gap between the highly developed information processing capability of the microcontroller and the relatively unsophisticated sensors currently feeding data into the electronic control unit." ■

Big 3, Transplant 7

Domestic dominance wanes, but the worst may be over

It is 1999 and the American automotive industry is having a renaissance of sorts.

Having overcome the bleak days of restructuring and bullet-biting that cluttered the early '90s, the Detroit Big 3 and their new industry neighbors, the Transplant 7, have developed a new symbiosis. The transplants bolster their operations with captive sales to the Big 3. The Big 3, in turn, have inculcated more efficient production systems from the transplants, and widened profit margins by sharing overhead and development costs through joint ventures.

Having lost almost half of the entire North American market in the course of 25 years, Detroit is now reaping some rewards from a mammoth, decade-long campaign to open new plants, rebuild and retool vital older plants, close down marginal car lines, consolidate the production of diverse models, introduce new products and respond faster to consumer desires than ever before.

General Motors has adopted some of the ways of partners Toyota, Suzuki and Isuzu. Ford has learned from partners Mazda and Nissan, and Chrysler from Mitsubishi and Hyundai. Market share has stabilized, and the U.S. corporate triumvirate that produced 10 million passenger vehicles to mixed results seven years ago in 1992 is now selling 9 million a year with more encouraging margins.

The great industrial management reawakening of the 1980s has resulted in car plants that are more cost efficient and productive. U.S. factories are pumping out bigger numbers of cars and recreational vehicles, and annual U.S. vehicle sales, strengthened by population growth and more appealing sticker prices, are holding fast at 14 million to 15 million units a year. Stringent environmental legislation during the early '90s made vehicles lighter and more fuel efficient. New component technology has improved performance. Tougher competition has bred better product quality, better customer satisfaction at the retail level.

The domestic industry has bounced back from those fierce competitive blows of the 1980s, when new Japanese and Korean competitors sliced away at the market. Foreign-based car companies are now producing a once-unimaginable 4 million cars, trucks and vans a year in America. But half of that number is being sold by the Big 3 themselves.

American suppliers who, just 10 years before, were desperately fighting the incursion of offshore competitors have formed hundreds of new partnerships with Japanese firms to produce lower-cost, higher-profit components to both transplant and Big 3 customers.

Import levels have fallen from their peak of 3.2 million cars in the early '90s to about 2.5 million.

A rose-colored vision of days to come? Not necessarily, a number of leading U.S. auto industry analysts maintain. According to some, the climax to the dramatic power shift now in progress between domestic and offshore industry forces could come in the next decade. The outcome could be the industry renaissance described, or if circumstances continue on in their current trajectory, a gradual wresting away of market control from the U.S.-based companies. How well the American industry fares, some observers say, depends largely on how well the Big 3 and their key suppliers come to terms with the phenomenon at their doorstep — the transplants.

Author Lindsay Chappell is the chief of Automotive News' Mid-South bureau.

MAZDA MOTOR CORP.
U.S. vehicle sales 1989: 370,000
N. American vehicle production 1989: 200,000
N. American vehicle production 1992 (est.): 360,000
Plants:
● Mazda Motor Manufacturing (U.S.A.) Corp. (1987)
The Flat Rock, Mich., manufacturing plant is still in the first phase of production, building 200,000 cars a year. In 1990, the plant will yield 240,000 a year, including the Mazda 626 and MX-6, and the Ford Probe.

AUTOMOTIVE NEWS/JOE WILSSENS

The transplants have mastered the art of making gradual, minute, incremental labor-saving changes in production.

The 1980s passed like a kidney stone for many in the American auto industry. It was, in the final analysis, a decade of absolute change in which foreign competition cracked wide open every corner of the U.S. market bastion. As if in fast motion, the industry saw the wholesale acceptance of Asian-designed and engineered cars and light trucks among U.S. buyers, the mushrooming of a permanent retailing establishment for foreign manufacturers and the end to the presumption of American leadership in vehicle quality and technology.

Such was the atmosphere for the first decade of the transplant. Though West Germany's mighty Volkswagen AG had first opened a U.S. plant in the '70s to supply what would soon become a dwindling market for its low-cost, high-quality line, it was the Asian-based car companies' arrival in the '80s under a whole new set of circumstances that heralded the coming changes of the 1990s.

In sheer numbers, no one offshore manufacturer amounts to more than a small competitor in the U.S. market. American Isuzu, for example, sells about half the number of cars that Dodge sells of its Colt model. Compared to General Motors' inventory of plants and production volume, all the output of all the transplants combined still represents a minority share of the market. But the new facilities that overshadow the rural midwestern cornfields where they operate bode an uneasy future for the Big 3. The transplants are not so much succeeding by mastering the traditional U.S. car-production game. They are succeeding by playing under new rules. How well they absorb and excel at those new rules could determine which future they see.

In the brief span of eight years between 1981 and 1989, the Japanese car companies went from no U.S. production capacity to a total capacity of 1.5 million units a year. By 1992, the group's total North American capacity will reach 2 million. And by 1995, based almost entirely on existing plans, the number is likely to pass 3 million, representing a fourth of all North American production.

The question many in the industry now ask is: How much more can the transplants build? With immense capital at their disposal from a decade of strong earnings, and favorable yen-dollar exchange rates resulting from the economic summits of the mid-80s, the larger Japanese players could easily put more plant capacity in place during the coming decade. And undoubtedly, additional plans will be unveiled. But transplant expansion during the '90s will be affected by five key issues:

● Progress in U.S. foreign trade policies. As the U.S. attempts to pry open tightly controlled Asian markets to U.S. goods during the coming decade, one repercussion may be more transplant activity. Japan's leaders could easily respond to U.S. concerns over endless trade imbalances by discouraging the Japanese auto-exporting industry. The Japanese government has already asked automakers to refrain from constructing more auto plants in Japan, though the specific intent was to protect the industry from a domestic glut. Free market economics will dictate most of the allocation decisions of the coming decade, however.

It is now estimated that a transplant can produce a car at a $400 to $600 cost advantage over Detroit. The same car produced in Japan has only a $300 advantage after paying for importation. At the same time, the profit margin on a Japan-built car sold in Japan is greater than that on the same car exported and sold in America. Domestic tax changes in Japan in 1989 spurred an auto sales boom that the Japanese carmakers struggled to supply. It will clearly be in the imports' best interest to shift production for the U.S. market to U.S. sites in the future.

● More aggressive U.S. environmental policies. An apparent stall in the auto industry's ability to improve fuel efficiency in the late '80s did not sit well with many in Congress. As the decade closed, the Bush Administration, the EPA and a half-dozen congressmen were formulating plans to set new guidelines for fuel-efficiency improvements. Should the resulting legislation ask for large and quick increases in mileage averages, the producers of smaller, lighter, more fuel-efficient cars would enjoy a sales boom. Honda, Toyota, Nissan, Hyundai, Isuzu and others would have new impetus for expanding U.S. capacity.

● Further changes in the yen-dollar exchange rates. Although the economic community widely believes the yen has stabilized long-term in the range of 120-140 to the dollar, even a short-term drop could make real estate buying and capital expenditures in the U.S. market more appealing for the Japanese. The financial premise of the transplants themselves is to make production immune to currency fluctuations. But as long as U.S. capacity growth is desirable, the multinationals will look for opportune moments to invest.

● The vitality of the U.S. economy, including auto sales. Obviously, a major recession would throw the brakes on industrial expansion in most sectors, although investment funding from sources outside the States would remain somewhat impervious to a steep down-cycle here. But for the most part, new plant capacity will depend on sales growth. The transplants enjoy still another advantage in the event of a long-term economic shift, causing, for example, a demand shift to econo-cars. The transplant facilities are newer, and designed for flexibility to allow the companies to change product lines more easily.

● U.S. public attitudes toward foreign interests. By 1989, the Japanese Automobile Manufacturers Association was maintaining that whatever "anti-foreign" sentiment existed in the U.S. toward the Japanese car makers had, for the most part, dissipated.

But the issue remained evident in transplant objectives. Every transplant in the country is currently attempting to increase local purchasing of parts and local part production in order to increase their vehicles' domestic content — principally to assuage public resentment of their siege of the domestic industry.

Solveig Spielmann, chairman of International Business Counselors, a Washington, D.C.-based consulting firm on trade policies, agrees that consumer pressure against offshore manufacturers is not likely in the coming decade. But she acknowledges that the issue is tied to economics.

"It's possible that we could see more anti-foreign-investment public sentiment, but I don't believe the conditions exist for it," Spielmann says. "These are good times in the country. People want to work."

Not, apparently, a key factor in the transplants' future is the basic issue of market overcapacity. A general assumption underlies the segment's growth that Big 3 production, plus transplant production doesn't necessarily equal total industry demand. Transplant growth is taking place to serve the growing sales results of the transplant parent companies. If new transplant production capacity leaves the North American indus- ▶

TOYOTA MOTOR CORP.
U.S. vehicle sales 1989: 960,000 (est.)
N. American vehicle production 1989: 250,000
N. American vehicle production 1992 (est.): 500,000
Plants:
● New United Motor Manufacturing Inc. (1984)
A 50-50 joint-venture with General Motors, NUMMI supplies Toyota with 100,000 Corollas a year.
● Toyota Motor Manufacturing U.S.A. (1988)
The $800 million facility in Georgetown, Ky., can produce 200,000 units a year of the company's best-selling U.S. car, the Camry.
● Powertrain Plant (1989)
Toyota is spending $300 million to open a 4-cylinder engine plant adjacent to the Camry facility. By 1991, the plant will also be supplying many of the engine components, including pistons, valves and cylinder heads.
● Toyota Motor Manufacturing of Canada (1988)
The Ontario facility produces 50,000 Corollas a year.
● TABC Inc. of California (1974)
The Long Beach, Calif., plant produces pickup truck beds. Plans to expand the operation were stymied by U.S. industry opposition in 1988.
● NUMMI 2 (Proposed: 1991)
Toyota, independently of GM, plans to open a second line at NUMMI to produce approximately 100,000 small pickups a year.

NISSAN MOTOR CO.
U.S. vehicle sales 1989: 678,000
U.S. and Mexican vehicle production 1989: 360,000
U.S. and Mexican vehicle production 1993 (est.): 650,000
Plants:
● Nissan Motor Manufacturing Corp. U.S.A. (1985)
The Smyrna, Tenn., facility currently yields 220,000 Sentras and light pickups a year. By 1992, the plant will expand capacity to between 400,000 and 440,000 units to include production of an as-yet undesigned Stanza-level sedan.
● Nissan Mexicana, S.A. de C.V. (1966)
Three Mexican plants now produce approximately 120,000 Tsurus (Sentras) a year, as well as engines and various stamped components, but will probably expand production to 200,000. Engines have been exported to both Japan and the U.S., and vehicle exports have reached about 26,000.
● Avon Lake Plant (under construction: 1992 est.)
Nissan will develop a new minivan, the VX54, in conjunction with Ford Motor Co., which Ford will assemble in Avon Lake, Ohio. Nissan will derive approximately 50,000 units a year from the project.

FUJI HEAVY INDUSTRIES
U.S. vehicle sales 1989 (est.): 150,000
N. American vehicle production 1990: 60,000
N. American vehicle production 1995 (est.): 120,000
Plants:
● Subaru-Isuzu Automotive (1989)
The last of the major Japanese carmakers to build in the U.S., Fuji/Subaru will receive half of the joint venture's 120,000-vehicles-a-year output. In the early to mid-1990s, the Lafayette, Ind., plant will boost capacity to 240,000 units a year.

HYUNDAI MOTOR CO.
U.S. vehicle sales 1989: 250,000
N. American vehicle production 1989: 10,000
N. American vehicle production 1991: 100,000
Plants:
● Hyundai Auto Canada
The Bromont, Quebec, facility will assemble 100,000 Sonatas by 1991, mostly for shipment to the U.S. A separate but adjacent stamping plant was scheduled to open in late 1989 to serve the operation.

MITSUBISHI MOTORS CORP.
U.S. vehicle sales 1989: 130,500
N. American vehicle production 1989: 45,000
N. American vehicle production 1991 (est.): 120,000
Plants:
● Diamond-Star Motor Manufacturing (1988)
A 50-50 joint venture with Chrysler Corp., which owns 12 percent of Mitsubishi, Diamond-Star produces 120,000 Mitsubishi Eclipses and Mirages a year.

SUZUKI MOTOR CO.
U.S. vehicle sales 1989 (est.): 29,000
N. American vehicle production 1989: 10,000
N. American vehicle production 1992 (est.): 100,000
Plants:
● CAMI Automotive (1989)
The Ingersoll, Ontario, plant, a 50-50 venture between Suzuki and GM, has a capacity of 200,000 utility vehicles a year, divided evenly between the parent companies.

ISUZU MOTORS
U.S. vehicle sales 1989: 120,000
N. American vehicle production 1990: 60,000
N. American vehicle production 1995 (est.): 120,000
Plants:
● Subaru-Isuzu Automotive (1989)
Isuzu's 49 percent control of the Indiana facility will net it 60,000 pickups and sport-utility vehicles a year as production matures in 1990. Plans to double the capacity are indefinite, but forecast for the mid-1990s.

HONDA MOTOR CO.
U.S. vehicle sales 1989: 800,000
N. American vehicle production 1989: 420,000
N. American vehicle production 1992 (est.): 700,000
Plants:
● Honda of America Manufacturing/ Marysville (1982)
The first Japanese transplant facility, Honda of America Manufacturing in Marysville, Ohio, produces 360,000 Accords and Civics a year, and also builds motorcycles and provides engineering support to Honda facilities across the continent.
● East Liberty Plant (1989)
The new 150,000-unit-a-year plant will initially produce 4-door Civics, but that vehicle will be replaced in late 1990, and the company is already considering a second vehicle at this Ohio site.
● Honda of Canada Manufacturing (1986)
The Alliston, Ontario, plant may be expanded from 50,000 Civics a year to 80,000 in 1990. Most production is for the Canadian market, although Honda is able to ship more freely between Canada and the U.S. now by meeting the domestic content conditions of the Free Trade Pact.
● Honda de Mexico (1988)
Honda officials have said there are no vehicles in the Guadalajara, Mexico, facility's future. For now, the plant will build replacement parts and body panels for Honda vehicles and motorcycles.
● Anna Engine Plant (1985)
By 1991, Anna will yield 500,000 engines a year for both the Accord and Civic. Plans are for the facility to produce all the engines needed for Canada, East Liberty and most of Marysville.

try as a whole with too many assembly lines in action, the assumption goes, it will be the older, less efficient and less flexible operations that will feel the pressure. In other words, it will be the Big 3, whose individual market shares have slipped for the past decade and will logically slip during the coming decade.

The result could be painful. If, as the automotive market research firm Autofacts calculates, total U.S. production capacity grows to 15.6 million by 1993, excess capacity could reach 5.3 million units, based on current utilization rates and sales levels. Autofacts contended that by the early 1990s, 10 domestic plants would be closed as a result of the transplant boom. General Motors would face closing five, Chrysler three and Ford two, the firm speculated.

Plants open and close. GM itself rendered 10 plants inactive between 1987 and 1989, and opened or reopened three others. In 1990, GM is scheduled to open one of the biggest projects in its history, the Saturn plant in Spring Hill, Tenn. Interestingly, Saturn is predicated upon transplant principles. Stamping and parts-making are done at the assembly site. Factory job classifications are reduced to only a few levels. Workers are given more power to make on-line decisions on production quality.

An industry rule of thumb holds that American market demand increases by the need for one new assembly line a year. By that measure, the capacity crisis of the '90s could be less critical than the numbers would suggest. The Detroit carmakers are already eyeing various of their older plants and less promising vehicles to idle. If capacity of 1 million units is eliminated over a five-year period, when 2 million units of new, more efficient capacity is being added, the industry will roughly break even. The key difference is that older Detroit inventory will replaced by newer transplant inventory.

Clearly, the industry shift is not inherently transplant versus domestics, but rather old versus new. Not only are the transplant structures themselves newer, for the most part. Their systems of production have honed away older inefficiencies, such as costly work rules and unnecessary middle managers. The newer plant hardware allows for faster die changes and more expedient troubleshooting. Computer-choreographed delivery systems avoid the typical line shutdowns that plague older plants when suppliers stumble, and also cut overhead by eliminating plant warehouse space.

"The age of a plant is a very crucial issue in any industry," comments Thomas O'Grady, president of the industry consulting firm, Integrated Automotive Resources. "It's simply difficult to produce competitive products from an older facility that was built to operate under a different production system."

Newer plants also benefit from more efficient designs. The transplants have mastered the art of making gradual, minute, incremental labor-saving changes in production, the concept of "kaizen," which domestic manufacturers learned in the '80s to take seriously enough to introduce in their own plants. "We don't set out to double the output of our number two stamping line," explains a spokesman for Honda of America Manufacturing in Marysville, Ohio. "We look for only the next step. We shorten the time it takes to stamp our largest body panel by two seconds. And when we accomplish that, we shorten the time on the next largest panel, and then all the panels. And then we do the same thing on the next stamping line. When we've gone through the whole process, perhaps we've made the entire stamping plant 20 percent more efficient. But that wasn't our objective."

The age of factory employees will also affect transplant productivity in the '90s. The transplants have had three advantages in building their North American workforces. They have entered the market with no obligations to U.S. labor unions, which traditionally insist on certain employee-hiring procedures. They have used employment-application screening efforts to more carefully select workers based on physical and philosophical characteristics. And they have situated their facilities primarily in rural belts where applicants tend to have little history with either the automotive industry or manufacturing in general. The result has been a group of workers that are younger on average than those at Big 3 plants, who are slightly better educated, who have no predisposition to organized labor arrangements, and who — perhaps typical of younger workers — are more willing to cooperate with nontraditional labor practices, such as job rotation and accountability for production-line quality.

"When Detroit builds a new plant, they have to offer the jobs to laid-off UAW workers, who will probably be somewhat older and have their own ideas about the way plants are supposed to be run," says industry analyst Ronald A. Glantz, general partner with San Francisco's Montgomery Securities. "When a transplant opens a plant, it can go out and hire all 25-year-olds, prescreened to modern management and production techniques. The younger, more flexible workforce will simply be more productive."

It will also be less expensive. Because of their short history in the United States and the relative youth of their employee base, the transplants have no large pension and retirement expenses. GM alone supports almost 320,000 retired workers from its pension funds, more than 10 times the number of all the workers at all the transplants combined. In contrast to the new manufacturers, the average age of a GM worker is 43. Honda officials have countered that a young workforce has its unique overhead, too, including a higher incidence of family medical costs such as maternity benefits; aside from which the transplant must still pay into retirement funds for the distant time when its employees do retire. But the argument weakens under the weight of the numbers. GM's own healthcare bill topped $3 billion in 1989 — more than half Honda of America's total estimated revenues of $5 billion.

The '90s will see the "age gap" narrow between transplants and Big 3 labor forces. But it will still exist, and as long as it does, transplant overhead will be smaller and transplant operations more profitable.

One question remains about whether the transplants' young workers will maintain their enthusiasm indefinitely. The UAW union is moving slowly to bring the workforces into its fold during the '90s, and if successful, the raw productivity advantages could be lessened. So far, Honda, Nissan, Mazda and Mitsubishi have faced union organization drives in the States. Workers at Honda and Nissan decidedly rejected the union concept, while Mazda and Mitsubishi workers accepted it, largely because of pre-existing relationships with their Big 3 partners, Ford and Chrysler, respectively. By the early '90s, the union issue will also be posed at Toyota Motors' plant in Kentucky and Subaru-Isuzu Automotive in Indiana.

But by the end of the '80s, it appeared less likely that unionization would change the transplants than that the transplants would change unionization. The contracts that have been signed at Mazda, Mitsubishi's Diamond-Star Motors and Toyota's New United Motor Manufacturing in California, which was an existing union workforce when production began, indicate that union workers are willing to support the transplants' new management ways. In all three plants, workers have accepted limited job classifications, flexible work rules and job rotation. Issues of line speed and production changes are determined by committees that include line workers. Kaizen is in practice and productivity is still high.

The change may permeate the Big 3 in the 1990s. Saturn is already modeled after a transplant workforce. Chrysler's contract renewals in the early '90s are likely to be influenced by the innovative Diamond-Star contract of 1989. Ford will build minivans with Nissan in 1992 using some of Nissan's Japanese management practices, in addition to Nissan's cash. The odds are that if the 1990s are a showdown between old and new in the automotive industry, the manufacturing system that succeeds will be the one that appeals to the greatest number of people — whether in the factory or at the car dealership.

Toyota, the biggest of the Asian-based carmakers, has moved steadily but cautiously into its North American presence. It would be out of character for the global manufacturer to act otherwise in the coming decade. Toyota typifies the Japanese industry's habit of starting production with small, known quantities and gradually building up. New plants have tended to introduce modest levels of automation, by current standards, and to rely on more labor-intensive training to emphasize quality.

Still, by the close of the decade, the company had opened four American production lines, with plans for a fifth and speculation about additional capacity. U.S. company officials express interest in producing a full-size pickup somewhere in the States, probably near Toyota's $1.1 billion central Kentucky Camry complex. Toyota retailers in the States have pushed for a full-size vehicle to compete better in the lucrative pickup market. The entry would also give the company more power to penetrate its more elusive sales territories of the Midwest and the South.

Officials also acknowledge that the large new Kentucky plant could accommodate additional vehicles with minimal adjustment. While other new auto plants coming on line around the world have embraced a strategy of diversified, multi-vehicle production, Toyota's Camry plant produces only one vehicle. That plan is partially evidence of Toyota corporate conservatism, but probably not one that will be permanent. Toyota sales have rebounded from the downturn that followed the 1986 peak, and dealership outlets are slowly increasing. The market's appetite for product will clearly warrant more North American production over the next 10 years.

Toyota's involvement with GM in California will also have its benefits in the '90s. The working relationship has opened the door for many Toyota affiliate suppliers — who are hungry for Big 3 business — into GM's OE purchasing departments. And while GM has used the New Age environment at NUMMI to re-educate some of its management corps, Toyota has itself drawn valuable experience in managing a UAW workforce. Speculation has also hovered over the facility concerning GM's long-term plans. When the NUMMI agreement expires in 1996, one scenario has GM selling Toyota the other half of the operation. GM bows out of a plant it had originally closed anyway; Toyota picks up existing capacity for another 120,000 units a year.

Though Nissan experienced bouts of sluggish sales in the late '80s, it gave clear indications that its North American presence will continue to expand. In 1989, it embarked on a massive campaign to staff a new $50 million research and development operation in Farmington Hills, Mich., that company executives said will create new products specifically for the North American market.

The company entered the '90s with a number of obvious gaps in its U.S. production. It is now importing 110,000 Maximas a year from Japan, representing all but about 15,000 of the vehicle's total production. It is mulling over a plan to shift production of the sport-utility Pathfinder to Smyrna, which would mean another 50,000 units a year. And, like Toyota, it longed for a full-size pickup to counter Ford and Chevrolet. Unlike Toyota and Honda, however, it had no production in Canada, and faces coming to terms with creating and supplying local demand there during the '90s. The most logical move of the early '90s? A Maxima plant in Canada to supply Canada, the States and Japan.

At the same time, Nissan's relationship with Ford seems to be expanding. The two will co-produce a sport-utility vehicle in Spain in 1993, and possibly a sedan in Australia. What this suggests of the future relationship between Ford, Nissan and Ford-affiliate Mazda Motors remains to be seen.

The company also faces what the UAW called "a day of reckoning" with organized labor during the 1990s. Several industry analysts have chided the Smyrna management for "gloating" over the UAW's dismal showing at the company's first union election in 1989, when the UAW lost by more than a 2-to-1 margin. The union has vowed to return. If so, and if it should ultimately organize the transplant — a seemingly remote possibility at the close of the decade — company management will face an uphill climb in rebuilding the positive labor-management relations it now enjoys.

Though less than half the size of Toyota, Honda has moved more aggressively than any of the foreign car companies to establish a North American production base. Being the youngest of the major Japanese carmakers, Honda has depended, to a disproportionate extent, on the U.S. market for sales. As the '90s begin, the United States is importing more than a ▶

CHANGING SHARE OF U.S. MARKET
(figures in percent)

Company	1980	1985	1989	1994
General Motors	45.8	42.5	36.2	32.7
Ford	17.2	18.8	21.8	20.4

Japanese transplants take root

Supplier plants in U.S. will continue to have far-reaching effects

By any standard of measurement, Japanese transplants have enjoyed considerable success in the 1980s. Indeed, many in the American automotive industry have turned into Sinophiles: "If it's produced by the Japanese, either in the Orient or North America, then it must be good."

Domestic suppliers have been particularly hard hit by this blanket approval. A transplant which supplies Honda or Toyota often sees the welcome mat at the door when calling on Ford or Chrysler. And while Ford may claim that its Q1 suppliers are automatically qualified to do business with GM or Chrysler, an H1 or a T1 seems to put a transplant near the top of any domestic OEM's supplier class.

Some analysts are questioning the survival and ultimate success, i.e., the profitability, of the 300 plus Japanese transplant supplier plants, but few can deny that these new competitors represent a humbling experience for domestic suppliers as a whole. They have introduced new approaches to manufacturing, quality control and customer satisfaction which have shaken the foundations of the domestic supplier community.

Looking into the 1990s crystal ball first requires an examination of how transplants have affected their domestic brethren in the 1980s. The following list is by no means complete, and numerous articles have been written about each subject.

● Market Participation. Entering the North American automotive market has been the overwhelming concern of every transplant which has crossed the Pacific.

While profitability is a primary consideration of an American supplier contemplating such a significant move, satisfying their original equipment customers has been foremost in a transplant supplier's mind. Following original equipment manufacturers to the shores of America has had one benefit: The supplier has reasonable assurance that a contract is available if a plant can be built. This security has allowed the transplants to focus on a primary worry — learning how to do business in an alien culture. Not surprisingly, a large portion of transplants aggressively sought out U.S. joint-venture partners to help them become comfortable with government officials, construction companies, labor unions and the many organizations which must be dealt with to start a new business.

● Research, development and engineering. Initially RD&E was low on the list of transplants. Their first objective was to adapt manufacturing and assembly techniques proven in Japan to the American automotive environment. Manufacturing engineering has therefore received greatest attention. Japanese arrived to work with maintenance personnel and machine operators to teach new ideas. Close behind the manufacturing engineer is the engineer offering customer support.

● Manufacturing organization. Transplants have introduced more radical ideas here than in any other area. Just-in-time is the most noted, but perhaps not the most important example. Transplants are careful, even excessive planners. The objective is to get all parties to understand and buy into the plan, i.e., a pressurized consensus approach. One outgrowth is the phased implementation of production. Rather than cranking up as quickly as possible to projected production volume, transplants take considerable time to reach full capacity so that first-time quality is high when maximum line speeds are achieved. And because capital equipment is of the latest design, such new competitors are often tough to beat on cost.

● Labor. If domestic manufacturers learn only one thing from the transplants, it should be that production is an ever-changing process. Nowhere is this more evident than with regard to labor. Rather than management, capital and labor simply contributing to the final delivered product, transplants want each to interact with and improve the process. They have given a great deal of attention to labor's contribution to the production process, resulting in favorable lines of communication with management.

Transplants also realized the benefits of locating plants in smaller communities with more traditional American values and generally lower labor rates.

● Customers. In Japan, the customer is king. Japanese OEMs demonstrate this in their high concern with buyer satisfaction and the resulting dominance of the J.D. Power surveys. A transplant supplier's customer is the OEM, and he shows a similar fixation with satisfaction. An early example occurred when Chrysler agreed to let a transplant set up an office within its engineering complex with no guarantee that a contract would be forthcoming. The transplant engineers worked closely with their Chrysler counterparts and designed a product which matched the customer's precise needs. Today such investment is becoming standard procedure in developing long-term supplier relations.

Whatever we may be seeing in the transplants of the 1980s, it will certainly be different in the 1990s.

● Market Participation. Joint ventures have been the talk of the 1980s, but our Transplant Database suggests this will not be the case in the 1990s. The accompanying chart shows the portion of joint ventures by start-up year. With the exception of 1986, we have seen a steady increase in joint venture share. However, the 1990 share should decrease, and we expect this percentage to continue to fall. Indeed, buyouts may be the talk of the 1990s, as Federal Mogul, Borg-Warner, Wynn's International and others have already learned.

neering. The number of engineers is already growing faster than employee totals at transplant firms. While we do not expect the ratio of engineers to total employees at transplants to surpass that of domestic suppliers, it is very likely that transplants will become relatively stronger than competitors in customer engineering support.

In the area of new technologies, we see transplants already asserting themselves with the help of money. They continually seek out small technology firms needing funds for expansion, and they are actively courting university graduate research programs. Because government funding is lacking, Japanese firms will gain access to American R&D as a result of their deep pockets.

● Manufacturing organization. If we agree that the Japanese are obsessed with incremental improvement, the next step for transplants follows naturally. Once North America is no longer an alien business environment, the characteristics of production will become the foundation for building new manufacturing approaches in the 1990s. Adaptation and customization will be the theme for the next round of transplant openings.

● Labor. This has been an area of great success; however, transplants must prepare for a changing environment in the 1990s. The average transplant worker is young by automotive standards. If he or she were 30 when starting with Bellemar or Stanley Electric in 1982, then they will be nearing 50 at the end of the next decade. Health care and retirement will be their major concerns. These workers have demonstrated a long term commitment to their new employers by rejecting unions and dedicating themselves to new manufacturing methods. As the transplants' workforce ages, retirement, health care and other benefit costs will achieve a parity with that of domestic suppliers.

● Customers. While transplants will capture some domestic OEM business, they are beginning to realize that the high expectations of a few years ago may not pan out. If they are to survive the 1990s, the transplants will have to do it primarily based on contracts from their sisters. Over the past year, there has been a definite closing of the ranks among the domestic OEMs and their traditional suppliers. However, one battle ground remains: the aftermarket. Domestic companies such as Echlin and Standard Motor Product have been aggressively expanding their product lines to include foreign applications. Transplants are already preparing to capture their fair share of the independent replacement market for vehicles containing their parts.

So what is the bottom line on transplants in the 1990s? There will certainly be more of them, at least 350 supplier plants in total, and they will continue to make life difficult for their American competitors. But the U.S. economy is absorbent, and domestic suppliers are already adapting transplant techniques to their manufacturing lines.

Naturally there will be additional fallout on both sides. But when the dust settles in the 1990s, we expect to see many domestic suppliers holding up mirrors for the transplants to see some of their own transformed techniques. Such adaptation will make the automotive supplier environment just as competitive in the 1990s as it has been in the 1980s. ■

JAPANESE TRANSPLANT JOINT VENTURES
(portion of total start-ups by year)

Year	Percent of total
pre-1983	12
1983-84	23
1985	25
1986	50
1987	29
1988	45
1989	40
1990	35
1991	25

Author Gregory Macosko is a principal of Easton Consultants Inc., of Stamford, Conn., which specializes in strategy development for automotive companies.

third of Honda's entire Japanese output, and absorbing 400,000 American-built Hondas in addition. The company has stated its desire to design and build U.S.-specific vehicles in the States, and, like Nissan, is rapidly building up a U.S. design and engineering team for the mission.

To date, however, there have been no clear signals on what segment a new product might target. The company has no presence in the minivan, light-truck or sport-utility markets, and any new vehicle for them would likely be produced in the States.

Honda has targeted reaching an export volume of 70,000 U.S.-built units by 1991, or roughly 10 percent of its total North American output. Considering the plan to ship 50,000 units to Japan alone, indications are that future production could include a vehicle not produced in Japan.

The strong growth of Mitsubishi Motors in the '80s was led by its commercial vehicle division, although car exports have risen sharply in the last two years. Mitsubishi's ties to Chrysler and Hyundai both suggest that the future will see more joint venturing and mixed production in the States. The company is currently considering a North American engine plant, which could supply both Mitsubishi and Chrysler. Also reportedly under consideration is a Mitsubishi stamping plant in Canada to supply Chrysler's Bramalea, Ontario, Eagle division assembly plant, which could conceivably yield some Mitsubishi production. As Chrysler looks for other partnerships in the States to defray its cost of product development and plant construction, Mitsubishi will remain a key source.

The Mazda Flat Rock plant may serve as a vision of the future for some transplants in its symbiotic relationship with a domestic competitor. To overcome the enormous cost of starting a new plant, training a workforce and introducing new models to a still-fledgling market, Mazda, owned 25 percent by Ford Motor Co., sells a large share of its vehicle output to its Big 3 "parent." The captive arrangement gives Ford up to 120,000 Probes a year at lower costs than its average U.S. plant could maintain. And Mazda gains a large-capacity infrastructure which, if future demand warrants, could supply Mazda sales efforts.

The relationship will give Mazda, in return, approximately 9,600 Ford Bronco IIs from Ford's expanded Louisville Truck Plant in 1991. Mazda's assistance to Ford will also show up in Ford's U.S.-built 1991 Escort, which will be based on the Mazda 323 subcompact and carry a Mazda engine. It is worth speculating that Mazda could receive some additional U.S. production in exchange from Ford. At the same time, the company is perceived to be contemplating a new production site for more U.S. pickups.

Analysts have pointed to Fuji/Subaru as the least rooted and most vulnerable of the transplants, both because of the companies' smaller market share and because of the line's U.S. sales doldrums in the late '80s. But the introduction of the Legacy in 1989 indicated that Fuji would rekindle some market excitement in the '90s. Before the car was introduced, company officials were talking of Japan-based exports of the car to Europe, a first for the company, but an act that will increase the pressure on Indiana's success. Especially since Subaru of America anticipates selling as many as 80,000 Legacys a year and the plant will produce only 60,000. Nonetheless, Fuji is still contemplating exporting up to 12,000 Indiana Legacys a year to Taiwan in the early 1990s.

Isuzu's partnership with GM — which owns a 39-percent stake in the company — has probably helped Isuzu penetrate as far as it has in the States. The Japanese company has suffered from a weak balance sheet over the past decade, and its participation in Subaru-Isuzu Automotive is probably a signal that it is looking for new global opportunities. The company has discussed co-producing vehicles with GM's Adam Opel division in Europe, but what further U.S. opportunities it will find remain to be seen.

Suzuki appears to be rebounding from its sales catastrophe of 1987 when U.S. highway safety officials labeled the popular Samurai utility vehicle unsafe. A key to Suzuki's U.S. growth in the '90s will be its relationship with GM, which owns 4.8 percent of the company. The new CAMI joint venture is producing the Sidekick, and its GM equivalent, the Tracker.

The company is by no means in a strong global position, however. Financial institutions now essentially control the corporation, which suffered from undercapitalization in the late '80s. The company has shown some interest in improving its situation by marketing higher-priced vehicles, including some of GM's in Japan. Arguably, that strategy could lead to more U.S. production in the '90s if the pair co-develop a higher-end vehicle.

Many of the issues that govern what the Japanese transplants do in the '90s are not necessarily true for Hyundai. But the Korean carmaker is not immune to currency concerns of its own and the rising cost of Asian labor. The labor chaos of the late '80s sliced Korean output and exports during a crucial period. Workers struck across Korea to demand first an 18 percent wage increase and then a 27 percent increase. Increased production in North America may give the up-and-coming transplant more sales stability.

Initial production from Hyundai's $270 million Canadian plant is going to the Canadian market, except for a few thousand Sonatas which are being exported to Taiwan. But starting in 1990, the majority of the output will be shipped to the States. Some of the Sonatas will be sold to Chrysler for rebadging as a Jeep/Eagle vehicle. Look for an expanded tie with Chrysler in the '90s as the Big 3 partner ups its purchasing of captive production. ■

Tackling tomorrow's traffic today

U.S. looks for high-tech answers to future transit problems

There are 135 million passenger cars in the United States, one or every 1.2 licensed drivers. The utomobile has become a necessity nd a principal determinant of our festyle.

Because we depend so much on ars, it's frustrating when we occaonally discover that we can't get where we want to go.

The problem is traffic congestion congestion because of not nough pavement, accidents, conruction, rain, fog and road lockages of all types.

There are 110 million commuters the United States, double the umber in 1950. In 1986, 1.78 trilon miles were driven; and traffic ow was not just into town in the orning and out at night. It was in ll directions in, around, and cross town.

Over 61 percent of urban interate travel occurred under conested conditions (35 mph or less). here are two billion vehicle hours f delay per year attributed to conestion, and an estimated $73 illion loss to the nation because of ongestion and excess travel beause of poor navigation. Eliminaon of that loss for just two years ould have saved enough money to ave built the nation's entire interate highway system.

As if that isn't bad enough, it is timated that there will be a 400 ercent increase in delays by the ear 2000, and a larger fraction of e population will be involved.

Traffic congestion is often separated into two types — recurrent nd non-recurrent. Recurrent conestion is typified by the rush-hour affic or regular traffic jams round factories, office buildings nd shopping centers. A tunnel or ridge often produces recurrent e-ups. Non-recurrent congestion esults from accidents, construcon zones, stalled cars, special vents or inclement weather. It is timated that about 60 percent of e congestion delay in the U.S. is the non-recurrent type, while 40 ercent is recurrent.

There are several approaches to is problem.

aying more pavement would help, especially where congeson is recurrent. However, the inerstate highway system is about omplete and the public has beome concerned about taking up ore space with pavement and the igh cost of highway construction urban areas.

Mass transit also has a role to lay where large numbers of peole travel in specific corridors. owever, doubling mass transit ould only handle a few percent of e problem. And, the American ublic has demonstrated over and ver that it prefers the flexibility, rivacy and independence of the utomobile over mass transit.

Recently, interest has shifted to n Intelligent Vehicle/Highway ystem. Some call it "The Cooperative Highway." It's a way to balnce traffic densities throughout n urban area and give drivers hough up-to-date information at they can make the proper deisions about where to drive to void congestion and reduce asteful miles.

One might think of this system as a grand extension of the highway traffic advisory system based on helicopters and commercial radio used today. This system will do that job much better, and much more besides.

The Intelligent Vehicle/Highway System basically consists of four parts: a navigation system on the vehicle, a traffic control center for the urban area, two-way communication between the vehicle and the traffic control center, and sensors on the highway to detect traffic densities and vehicle speeds.

Navigation systems have been developed in several configurations. One effective system displays information, such as an electronic map, on a TV-like screen in the instrument panel. A marker continuously indicates the car's immediate location. It is possible with a navigator to type in a destination, and have it indicated on the map with an arrow pointing from the car's location to the destination. In addition, you get a readout of the distance to the destination. You can buy one for your car right now.

Traffic control centers already exist in a number of urban areas. Today, highway sensors on the Santa Monica Freeway send signals to the Los Angeles Center which allow the center to adjust freeway ramp gates. In the future, the center also would receive information from individual vehicles and adjust traffic signals, signs and ramp gates to balance traffic densities over the entire street/highway system — in real time. The center also would advise drivers of congested areas, weather, accidents or any other blockage and suggest alternate routes to avoid them.

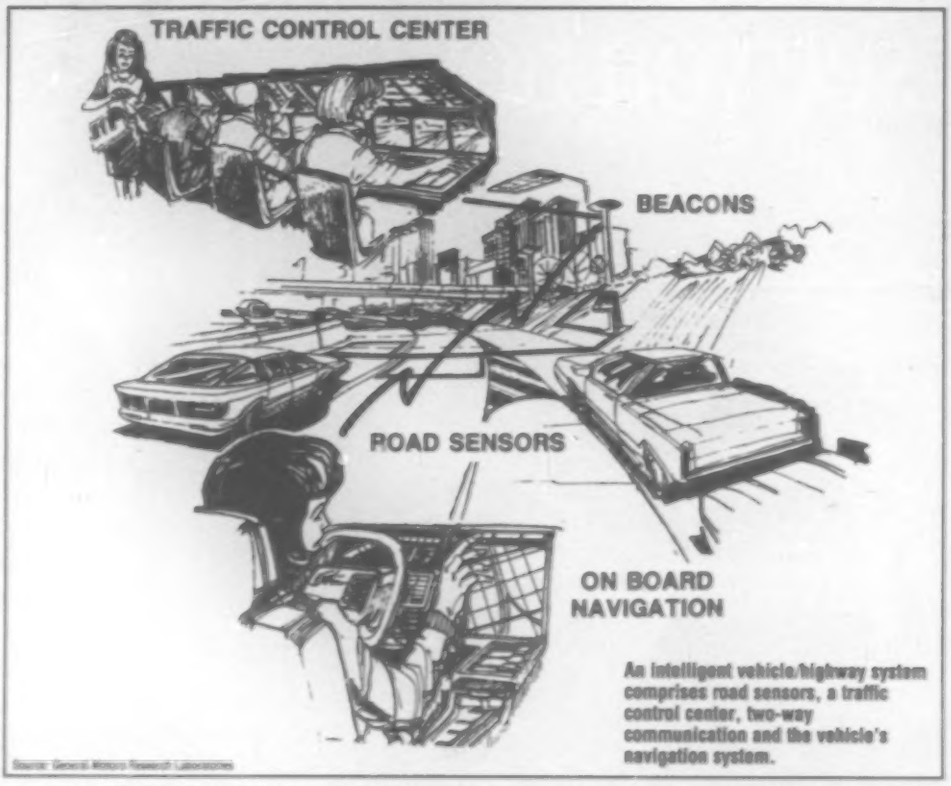
Once the two-way communication system is installed, the variety of information that could be supplied is considerable. We could provide information on the location of parking lots, police and service stations. A Mayday system could alert police or EMS units to accidents. Automatic toll collection could help reduce traffic backups. You could even supply an electronic version of the yellow pages to provide, say, restaurant locations, their menus and prices.

You may already have heard of Project Pathfinder. In this three-year experiment to be conducted in the Santa Monica SMART Corridor, cars equipped with a navigator and a two-way communication system will be connected to the Caltrans Traffic Operations Center. General Motors is providing 25 Oldsmobile cars to test, and they will be equipped with Etak Navigators. The project is jointly supported by the California Department of Transportation, the Federal Highway Administration, and General Motors. The purpose will be to determine the benefits realized by the driver and overall costs. This is a small test. Outside the U.S., tests on a much larger scale are being conducted.

In Europe, there is the PROMETHEUS Project. Its participants include: 14 auto companies (with the U.S. and Japanese excluded); over 70 other computer, electronic and telemetering companies and institutes; and five governments. The project is budgeted at $750 million and is planned to last 8 years. Large-scale experiments are already under way in London and Berlin. Similar programs are under way in Japan. Experiments with the AMTICS program began in 1988 in Tokyo. Another Japanese program, called the Intelligent Vehicle System, is priced at $700 million.

I mention these overseas programs to indicate that this concept is real and being pursued vigorously in other countries. In the U.S. there are a few small-scale activities under way, but the problem is king-sized, and what is needed is a truly national initiative.

What is most needed are demonstration experiments, like the Pathfinder Project, of different aspects of the concept under a variety of urban conditions. We need to find out which technology will give us the most benefit with the least cost. We also need additional research on traffic theory to develop the expert systems for use in the traffic control centers. And finally, it would make a lot of sense if we combined our efforts with the Europeans and Japanese to proceed as quickly as possible. ■



An intelligent vehicle/highway system comprises road sensors, a traffic control center, two-way communication and the vehicle's navigation system.

Improving the flow of traffic

Increase predicted in sales of signs, signals and road markers

Signals, signs and pavement markings improve traffic flow, help avoid damage to motor vehicles and roadside properties and prevent injuries and fatalities.

Those products are selected and purchased by officials in a wide variety of appointed positions in city, county and state governments.

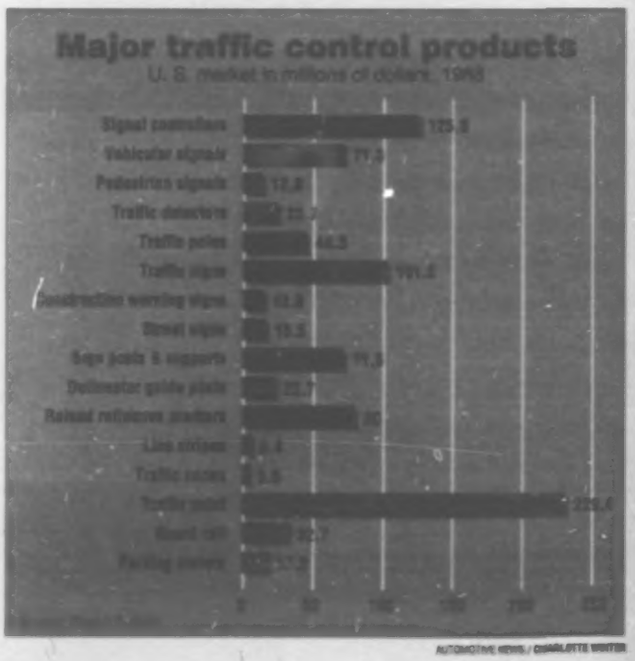
The decision-making processes vary widely among those end users. Growth in regional traffic volume is directly related to population growth and to socio-economic trends like the increase in wage earners per household.

A report by Frost & Sullivan, a New York market research firm, says the overall market for those products should increase 3 percent annually through 1993. Among those products, signal controllers will remain high in dollar sales and are expected to exhibit a high percentage of growth. Sales totaled $125.8 million in 1988, and are expected to jump to $149.2 million in 1993. (All figures are in constant U.S. dollars.)

Unit sales are expected to increase from 21,440 in 1988 to 26,650 in 1993. The greatest increases are expected in cities with populations of 5,000 to 9,000 and counties of 25,000 to 49,000.

By geographical areas, the Mountain region will reflect the largest increase in unit purchase volume by both city/county and state governments, with an overall increase of 53.1 percent during the five-year period. The largest volume of sales will continue to be in the South Atlantic region, with 5,750 units sold in 1988 and 6,485 forecast for 1993.

The largest dollar sales by product are paint for traffic lanes, signal controllers and traffic signs. Sales of traffic paint were $229.4 million in 1988, and sales of $237.9 million are forecast for 1993.



AUTOMOTIVE NEWS / CHARLOTTE WHITE

Sales of traffic signs totaled $101.9 million in 1988 and are projected at $116.4 million in 1993.

Frost & Sullivan said traffic signs lead in unit sales; 4.2 million were sold in 1988 and 4.8 million are expected to be sold in 1993. Other high-unit-sale items include raised reflective markers, signposts and supports. ■

64th year—$60.00 per year, $1.50 per copy

Ex-salesman Gary Carr, right, shares his pitch with correspondent John Stossel. The Nov. 17 segment on ABC's "20/20" program purported to expose "secrets of the car salesman."

Chicago dealers pull ads after 20/20 show

By Charles M. Thomas
AUTOMOTIVE NEWS STAFF REPORTER

Incensed Honda, Acura and Chrysler Motors dealers in the Chicago area will withdraw advertising from WLS-TV, an ABC affiliate, because of a recent ABC network *20/20* news show segment called "Secrets of the Car Salesman."

It cast auto salesmen, and by extension auto dealers, as cheesy hucksters who will use any trick in the book to clinch a sale and make chumps of unwary customers.

The Nov. 17 segment was based on author Gary Carr's self-help book, "How to Outsmart the New Car Salesman."

Carr's premise is that all car buyers have been cheated at one time or another.

But some auto dealers are crying foul, saying the program was lopsided — heavy on the sleazy practices of a small number of dealers, and nothing at all on the philanthropy of most reputable dealers.

"I want equal time for those people who are a credit to this huge industry and act responsibly and diligently," said Robert Foley, owner of a Buick dealership in Wilmette, Ill.

"We are the first stop for people needing sponsors for Little League baseball, hockey teams, parades, ads for charitable functions, school fund raising and donations for just about everything else," he said.

In the show's aftermath, some Chicago-area dealers are protesting by folding up their wallets.

Gary McGrath, who has Honda and Acura dealerships in Elgin and Glenview, respectively, said Chicago-area Honda dealers spent about $750,000 with WLS last year. Acura dealers spent $200,000.

"The advertising boards met and are in favor of not spending with the station for 30-60 days," he said.

The boards represent 24 Chicago-area Honda dealers and eight Acura dealers.

2-STROKE: *Automakers in U.S., Japan and Europe strive for big gains from small engine*

By Jack Koebler
AUTOMOTIVE NEWS STAFF REPORTER

The two-stroke engine, once little more than a powerplant for lawn mowers and dirt bikes, is the subject of some of the most intense engine development since rotary engine fever hit the industry in the early 1970s.

Automakers on three continents have programs to put two-stroke engines in a variety of cars and trucks during the 1990s.

There is strong disagreement about whether the engine should be mechanically complex or simple, and whether it is best suited for small cars, large cars and trucks — or nothing at all.

Seven makers admit they have two-stroke programs, and others are believed to be secretly developing the engine.

But there is no guarantee that all — or even any — will put two-strokes into production cars and trucks. Two decades ago, several makers studied the Wankel rotary engine which, like two-strokes, had weight, packaging and power advantages and emissions problems. Only Mazda entered long-term volume production.

Now, powerplant engineers at General Motors, Ford Motor Co.

Detroit unveiling for Daytona

The 1990 Dodge Daytona R/T Concept Car is a futuristic look at the current Daytona. The car, which debuts at the North American International Auto Show in Detroit, Jan. 6-14, features a 2.2-liter turbocharged engine that pumps out 174 horsepower. Over 40 production and concept cars will be introduced in Detroit. **See story on page 3.**

Makers hope sales follow Dec. pattern

By Dutch Mandel
AUTOMOTIVE NEWS STAFF REPORTER

DETROIT — Following an abysmal 1990-model launch, automakers hope that a recent trend — higher December sales — will lift them out of the year on an up note.

Analysts foresee a slight December upswing, but they point to greater economic indicators as reasons why new-car sales will continue to trail those of years past.

"The (improving December) numbers have been around for a while, and I think that has shown a pattern," said Ann Knight, auto analyst for Paine Webber, New York.

Knight said she does not anticipate a sales pickup in 1990, primarily because of the weakness in the U.S. economy, particularly soft employment rates.

Fiat, Soviets join forces in $1 billion auto venture

By Luca Ciferri
STAFF CORRESPONDENT

TURIN, Italy — The Soviet Union has selected Fiat Auto to help Russia increase annual car production from 1.3 million to 2.3 million during the next five years.

The key to the $1.35 billion Fiat-Soviet cooperation is production of a new 1-liter minicar car in Yelabuga, some 700 miles southeast of Moscow. Production is slated to start in late 1993 or early 1994 and reach 300,000 units a year by 1995.

The development is part of a broad opening of the economy and society in the Soviet Union, dating back to the goal set at the 1986 Communist Congress of doubling the country's industrial potential and per-capita income by 2000.

Cesare Romiti, Fiat Auto managing director, and Nikolai Pugin, head of the Ministry of Automobile and Machinery Industries, signed a preliminary agreement in Rome last Tuesday, on the eve of an official visit to Italy by Soviet President Mikhail Gorbachev. The agreement is expected to become official in six months.

With obvious pride, Romiti emphasized that this is the first financial joint venture between the Soviet Union and a Western country.

Fiat was chosen, said Pugin, because of its excellent business relations with the Soviet Union, which started in 1913. The culmination was the $235 million turnkey contract with VAZ, which began producing Fiat-derived Ladas at Togliatti in 1970.

Romiti also confirmed that Fiat's new minicar, code-named X 1/72, will be produced in Poland.

The developments follow a steady and successful drive by the Fiat Group into the Eastern Bloc.

Detroit, L.A. kick off vital round of shows

By Dutch Mandel
AUTOMOTIVE NEWS STAFF REPORTERS

DETROIT — Sparked by anxiety over sagging new-car sales and relentless competition, automakers are placing increased importance on auto shows.

The Big 3 will showcase no fewer than 18 all-new production vehicles and 18 concept vehicles at auto shows this year, with the biggest introduction coming from Chevrolet, which will display five 1991 models at both the Detroit and Los Angeles shows in January.

The emphasis on shows is displayed not only in more new-vehicle introductions, but also in higher show budgets, flashier exhibit areas, more knowledgeable manufacturer and sales representatives, and an increase in interactive consumer displays.

Those new marketing and merchandising plans will be tested at the upcoming North American International Auto Show in Detroit and the Greater Los Angeles Auto Show, both of which kick off the 1990 show season on Jan. 6.

"I think there's a greater sense from manufacturers and dealers everywhere that they are going to use every outlet they can to reach consumers," said Andy Fuzesi, manager of the Los Angeles show.

New-car sales were down 10.16 percent in October 1989 from the year earlier — to 747,737 from 832,301. For the first 10 months of 1989, sales were down 4.37 percent from the year-ago period — 8,534,256 vs 8,923,896.

For Detroit's auto show organizers, the Detroit Auto Dealers Association, the goal is to be counted among the elite of the international auto show circuit — to be compared with Geneva, Frankfurt and Tokyo as a show where the industry's influence group assembles.

The show will move closer to reaching that status by introduction of some 42 new production and concept vehicles at the 1990 event.

Last January, 637,000 people attended the Detroit show, while some 1.9 million visited Tokyo's show in October.

Los Angeles' retailing importance is unequivocal: Set in the largest car-buying market in the United States, where exotics and econoboxes vie for space, the auto show has nearly become a pilgrimage for Southern California residents. At the 1989 show, some 535,000 people went through the L.A. turnstiles.

Show attendees do buy cars. According to David T. Fischer, co-chairman of the Detroit event, a Detroit showgoer survey found that 71 percent of Detroit show attendees in 1987 bought a new car within 12 months.

Said Peter Levin, director of advertising for Cadillac: "Auto shows are opportunities to go beyond the

Ford demands machine tools match Japan's

By Laura Clark
AUTOMOTIVE NEWS STAFF REPORTER

Ford Motor Co. says the performance of its in-plant machine tools is well below those used in Japan's auto plants and, beginning in 1990, Ford will ask its machine tool suppliers to meet Japanese efficiency levels.

John Casey, Ford director of plant engineering, said Ford's goal is to raise the "effectiveness" of Ford's in-plant machinery from 60 percent to between 80 and 85 percent, a level now achieved by automakers in Japan. A machine's effectiveness is measured by multiplying percentages assigned to uptime, quality output, speed and other factors.

Suppliers that continually show an inability to fix Ford business. And some machine suppliers note the expense and time the program may require. Suppliers that will be

Toyota begins U.S. engine output

Kentucky plant takes major step toward raising domestic content

By Lindsay Chappell
AUTOMOTIVE NEWS STAFF REPORTER

GEORGETOWN, Ky. — Shortly after lunchtime at Toyota's new engine plant, engines are moving down the assembly line at something less than a trickle. On this first day of official production, managers expected to have 23 engines completed by now. The actual flash-board tally drowsily changes from 13 to 14.

Opening-day jitters aside, the slow pace of engine production belies the high expectations for the plant. With U.S.-Japanese trade tensions swelling, Japanese carmakers are pushing for higher and higher U.S. content. They realize that U.S. engine assembly is their best shot at boosting domestic content in their American-made vehicles.

But now that industry sales are in a tailspin, they are revealing some caution in taking further steps too quickly.

Toyota's own outlook appears to have changed in recent weeks as gloomy industry sales forecasts appear. In October, the company predicted its U.S. sales would increase from 930,000 vehicles in 1989 to 950,000 in 1990. The company may now be preparing for a rough ride.

Kaneyoshi Kusunoki, chairman of both Toyota Motor Manufacturing U.S.A. and Toyota Motor Sales U.S.A., indicated that the company is siding with forecasters who believe a sales downturn is ahead. This year, Toyota's U.S. car sales were up 6.7 percent through October, but Kusunoki acknowledged that they could fall.

"The people who consult with us on sales and who do our forecasts say so, and I believe them," he said.

Kusunoki did not speculate on sales numbers, but he indicated that future Toyota investments will be determined by the general sales climate.

Because of increased demand, "we are thinking of what expansions will be necessary," he said. "But as you know, people in the industry are forecasting that the next couple of years will be bad for sales. I think that to make a great deal of investment now would mean problems for Toyota."

Kusunoki said the company hasn't decided how much more it will invest in the new $300 million Georgetown engine plant. Toyota announced in late October that it will gear up to produce 300,000 engines annually at the plant, rather than the 200,000 planned previously, and that it will increase capacity at its Camry plant next door to 240,000 cars from 200,000.

The details on how much that vehicle expansion will cost is undetermined, he said.

The transplants have generally been reaching their

Jordan, Tonkin lead World Congress gala

DETROIT — Charles Jordan, vice president of design at General Motors, and Ron Tonkin, president of the National Automobile Dealers Association, will address the Automotive News World Congress Tuesday Evening Gala Jan. 9 in Detroit.

Tickets to the gala dinner are included with full registration to the World Congress or may be obtained separately.

The World Congress will run from Sunday, Jan. 7 through Wednesday morning, Jan. 10 at the Westin Hotel in Detroit. Attendees will hear from 30 top experts and executives from the auto industry.

"The roster for this year's congress is stronger than ever," said Keith Crain, publisher of *Automotive News*.

Register for World Congress, Page 53

Jordan joined GM in 1949, was named chief designer of Cadillac in 1957, and five years later was appointed executive in charge of automotive exterior design for all GM cars and trucks.

In 1962, *Life* magazine selected him as one of the 100 "most important young men and women in the United States."

After three years as design director at Adam Opel AG in West Germany, Jordan returned to the United States in 1970 to head all automotive exterior design for Chevrolet and Pontiac. In 1977, he was promoted to corporate director of design, and in 1986 he was appointed to his current position.

Tonkin is a megadealer in Portland, Ore. During his tenure as NADA president, the outspoken Tonkin has been one of the most visible NADA presidents in history. He has blasted manufacturers about fleet subsidies, rebates and mandatory advertising associations, saying these measures are making dealers an "endangered species."

He created the Rough Riders, a group of 1,500 dealers dedicated to pushing the association's agenda.

The four-day World Congress begins the evening of Jan. 7, with addresses by Harold "Red" Poling, vice chairman of Ford Motor Co., and Vincent A. Sarni, president and chief executive officer of PPG Industries.

Poling, who will succeed retiring

45 MPG

80% in poll favor big hike in CAFE

By Arthur Flax
AUTOMOTIVE NEWS STAFF REPORTER

WASHINGTON — Nearly 80 percent of voters surveyed in a poll released last week favor an increase in corporate average fuel economy standards to 45 mpg by 2000.

Twelve hundred registered voters participated in the telephone poll, released by the Union of Concerned Scientists and the Communications Consortium. It gauged opinions on global warming and energy priorities.

The poll was conducted in late October and early November by Research/Strategy/Management, headed by Vince Breglio, chief pollster for President Bush and Vice President Dan Quayle in last year's campaign.

The voters were told that the current CAFE standard is 27.5 mpg and were asked, "Would you favor or oppose an increase in federal fuel economy standards for auto companies requiring that cars, on average, get 45 miles to a gallon by the year 2000?"

The poll found that 51 percent of respondents said they "strongly favor" a 45-mpg CAFE, and 27 percent said they "somewhat favor" it. Nine percent "somewhat opposed" the 45-mpg CAFE, and 8 percent "strongly opposed" it. Five percent offered no opinion.

Asked if they would pay $500 more for a 45-mpg car, knowing that the added money would be recovered in four years through fuel savings, 83 percent of respondents said they would, and 13 percent said they wouldn't.

Eighty-three percent of those surveyed said they either "strongly agreed" or "somewhat agreed" that automakers have the technology to make cars averaging 45 mpg well before 2000.

A number of subcompact cars on the market now are rated above 45 mpg by EPA.

The survey also addressed preferences in automobiles. Durability was ranked No. 1 on a list of "extremely important" virtues to consider when buying a new car. It was followed by "a safety demonstration" (which Breglio explained as customer perception of a car's safety), fuel economy, power and performance and size and comfort.

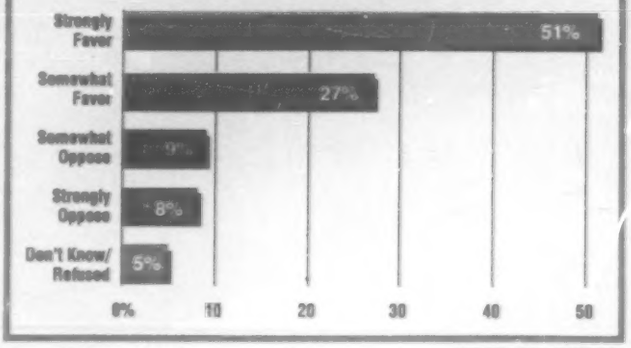
Below that were, "avoiding a special tax placed on less fuel efficient cars" and "a cash rebate or federal tax credit for the purchase of a fuel efficient car."

Breglio noted that 24 percent of those polled drive compact or subcompact cars.But there was little difference in answers concerning CAFE among large- and small-car drivers, he said.

Increase auto fuel economy?

What follows is just one of the questions asked of registered voters in a poll on fuel economy:

Currently, federal fuel economy standards require that auto companies produce cars that, on average, get 27.5 miles per gallon. Would you favor or oppose an increase in federal fuel economy standards for auto companies requiring that cars, on average, get 45 miles to a gallon by the year 2000?



AUTOMOTIVE NEWS / BEN GARLETON

Atmospheric pollution — including such issues as smog, global warming, the ozone layer and acid rain — was ranked by 52 percent of the voters as the most important environmental problem. Water quality was first with 22 percent.

Rep. Claudine Schneider, R-R.I., who has introduced an omnibus bill addressing 12 environmental issues, including CAFE, said, "It is clear, the poll results say the public is ahead of the policy makers. Polls are essential to moving Congress where (the public's) priorities lie."

The margin of error for the poll was plus or minus 3 percent.

The Union of Concerned Scientists is an independent, non-profit organization concerned with the impact of advanced technology on society. The Communications Consortium is a public relations firm that provides free services for public interest groups. It is funded by independent foundations.

Pollution gun aimed at car — EPA boss

By Arthur Flax
AUTOMOTIVE NEWS STAFF REPORTER

WASHINGTON — Congress is more likely to seek pollutant reductions from automobiles than factories because state environmental commissioners would rather not place the burden for cleaner air on local industries, EPA Administrator William K. Reilly said last week.

Reilly

In our state EPA committee meeting some weeks ago (Sept. 27 and 28), it became clear that the state environmental commissioners regard the automobile as a much more desirable place to get emissions reductions than their (local) plants and factories," Reilly said at an informal news conference. "They are clamping down heavily on the latter, but want to get much of the emissions reductions from technology improvements in cars, precisely to avoid having to go further with their own plants and thereby having an impact on employment," Reilly said.

"There is no question a lot of the information we have received — and I'm sure the Senate has received — from those agency heads has contributed to the conclusion that even if the technology (for reducing auto emissions) may not be there today, we should push forth and hope it is there tomorrow."

Reilly said there was a "relative consensus" among directors of state environmental commissions on the need "to go beyond what the administration originally proposed for reductions of hydrocarbons and NOx (nitrogen oxides) in cars."

The Senate is now considering stricter tailpipe emissions standards that would take effect in 2003. But it has yet to include an alternative-fuels plan in its legislation, as called for by President Bush and the EPA. Those standards, in particular a 0.125 gram per mile hydrocarbon limit, if feasible, would likely add very significantly to the cost of a new car, Reilly said. The EPA has previously estimated the cost at $500.

A House measure calls for the strict tailpipe standards in 2003, but only if EPA deems them to be needed and feasible. The House bill, as it is currently amended, also calls for automakers to certify that they can build 500,000 alternative fueled cars starting in 1995 and 1 million alternative-fueled cars a year starting in 1997. The president's proposed legislation would mandate that makers build those cars and offer them for sale.

EPA continues to hold out for the president's original alternative fuel mandate, Reilly said.

"You have a number of choices in the air pollution problem, and every time you decide to forgo one, you have to come down harder in another. If it is decided that alternative fuels are not going to play a large role in the next decade, and more in the next century, I would imagine there will be compensating needs for controls in vehicle miles traveled or on stricter controls in plants and factories."

GM C-body cleared in runaway probe

By Diana T. Kurylko
AUTOMOTIVE NEWS STAFF REPORTER

WASHINGTON — NHTSA has closed two more probes into unintended acceleration, concluding that mechanical defects do not cause the problem.

A 19-month investigation of 1.5 million 1985-88 General Motors C-body cars (Buick Electra, Oldsmobile 98, Cadillac Deville and Fleetwood) found there is no evidence of a defect or the potential for malfunction that would cause an unintended increase in engine power.

NHTSA also has closed a 13-month analysis into a possible throttle-control defect on 1.5 million 1986-87 GM H-body cars (Buick LeSabre, Pontiac Bonneville, Oldsmobile Delta 88). The investigation considered all components of the computerized ignition control, exhaust emissions, cruise control, fuel delivery and injection systems and found no defect.

Russell Skew, a staff member of the Center for Auto Safety, said NHTSA "is being deceived by the auto companies." He said the center will probably ask the agency to reopen the cases.

Three unintended acceleration studies are still pending: 1988 Acura Legend and Sterling models, affecting 78,100 cars; 1986-1988 Mercedes-Benz 300E models, 53,650 cars; and 1986-1989 Mercedes-Benz gasoline-powered models, 255,249 vehicles.

In the past two decades, NHTSA has closed more than 50 unintended acceleration investigations.

George Parker, NHTSA's associate administrator for enforcement, said that the findings of an outside study of unintended acceleration in March have been heavily weighed in the cases NHTSA has closed this year. In that study, the Transportation Research Systems Center of Cambridge, Mass., cited "pedal misapplication" as the major cause of the phenomenon.

Sudden-acceleration probe exonerates 1988 DeVille.

This summer, NHTSA closed an investigation of 1979-1987 Nissan 280ZX and 300ZX models, affecting an estimated 184,000 cars. That case had been kept open until the study was complete, Parker said. The organization tested 10 different makes and models, including two C-body GM cars.

In a closing report on the GM H-body, NHTSA said the perception of drivers who complained of unintended acceleration may not have been accurate. Stepping on the accelerator or brake pedal is such a routine act that a driver may have been less than alert when the so-called sudden acceleration occurred, NHTSA said.

Reports of unintended acceleration have been greatly colored by the notoriety of the Audi 5000 case. And, the classic example of mislabelled "sudden acceleration" is the GM C-car cruise control problem that resulted in the July recall of 1.8 million cars, Parker said.

Daimler to hike equity to 80% in Mexico's FAMSA

By Stephen Downer
STAFF CORRESPONDENT

MEXICO CITY — Daimler-Benz is expected to announce soon that it is increasing its stake in Mexican truckmaker FAMSA from 49 percent to 80 percent.

A FAMSA spokesman said the deal has been accepted by the board of the Hermes Industrial Group, currently the majority partner. He said the company is awaiting publication of the government's automotive industry decree before making an announcement.

The decree, expected this month, will set the industry's operating rules for the next six years.

In 1985, Daimler-Benz bought 49 percent of FAMSA, which stands for Fabrica de Autotransporte Mexicana, Sociedad Anonima.

It was the maximum share permitted under Mexican law. That limitation is expected to be eased.

A high-ranking automotive industry source said the government has already approved the Daimler-Benz agreement with FAMSA.

Until 1985, FAMSA had been only a truck assembler using Cummins, Perkins and International Harvester engines.

It now has a $40 million engine plant where Daimler-Benz OM366 engines are made. FAMSA is now also selling Daimler-Benz-designed cabs, made in Mexico.

News of the impending announcement followed the government's sale last month of four companies of the DINA Group to a Mexican consortium. Included in the $40 million sale was truck maker DINA Camiones, of which Chrysler Mexico owns 8 percent and Navistar owns 5 percent.

FAMSA and DINA Camiones share the entire market for 20,000-46,000-pound trucks.

BMW plans Mazda Miata-class roadster

By Richard Johnson
AUTOMOTIVE NEWS STAFF REPORTER

MUNICH, West Germany — BMW may have an answer for the affordable roadster challenge put down by the new Mazda Miata.

BMW's three product development units — Technik GmbH, Motorsports GmbH and the main Forschungs und Ingenieurzentrum center — are developing roadster concepts, said Wolfgang Reitzle, BMW's management board member in charge of research and development.

Technik, which is reponsible for the exclusive Z-1 convertible, is rumored to have created a roadster dubbed Z-10 that would be priced only a few thousand dollars higher than Miata if produced.

"That's an interesting segment," said Reitzle, "and it would fit BMW to offer roadsters as you saw with the Z-1 and in the tradition of our 507. That type of car — not the Miata exactly — but that type is also an interesting segment. I can't say that you'll never see a BMW in the lower-priced roadster segment — lower in comparison to Z-1."

The Z-10 2+2 is said to be planned for road tests beginning early next year.

Technik's Z-10 is said to be based on the new 318is, which uses the 136 horsepower 1.8-liter, 16-valve four-cylinder engine. While the Z-1 has a composite-body, the Z-10 has a steel outer skin. BMW does not offer the 85,000 mark ($47,000) Z-1 in the United States.

Classifying factors in auto deaths

Males under 30 have highest fatality rate, insurance study says

By Diana T. Kurylko
AUTOMOTIVE NEWS STAFF REPORTER

WASHINGTON — A study has found that drivers of large cars are less likely to be involved in fatal crashes, but age and sex are vital factors, too.

The Insurance Institute for Highway Safety said that death rates varied significantly within vehicle size categories, according to its study of deaths per 10,000 registrations in 1985-87 cars.

The highest death rate occurred with male drivers under 30, said Brian O'Neill, president of the insurance-industry-funded group. Cars driven by females over 30 had the lowest rate.

But the three factors — age, sex, and vehicle size — cannot explain all of the differences in death rates among cars of the same size.

Nine of the 103 vehicles rated performed far better than predicted. The predictions were based on a formula that takes into account the size of the car, age and sex of the driver and other factors.

For instance, the Honda Prelude had a death rate of 1.5 per 10,000 registered cars; its predicted death rate was 3.1. Forty-seven percent of the Prelude drivers were under 30 years old and 60 percent were male.

The other eight with far better-than-predicted ratings are: Nissan Sentra two-door, Volvo 740/760 four-door, Ford Taurus wagon, Volkswagen Jetta four-door, Chevrolet Cavalier wagon, Ford Escort wagon, Toyota Celica and Toyota Cressida four-door. Some of those cars are small — subcompact or compact — and driven primarily by young males.

Seven cars performed far worse than predicted: Chevrolet Chevette four-door, Plymouth Reliant four-door, Chevrolet Celebrity two-door, Dodge Aries four-door, Chevrolet Corvette, Chrysler LeBaron four-door and Chevrolet Sprint two-door.

Only 6 percent of the drivers of the intermediate size Chrysler LeBaron were under 30, but the car's fatality rate was 41 percent higher than predicted. The Dodge Aries and Plymouth Reliant had a similarly low percentage of young drivers — 10 percent and 4 percent, respectively — but death rates were 53 percent and 63 percent higher than expected.

ACTUAL AND PREDICTED DEATH RATES

Figures are reported for 1985-87 cars during 1986-88, as deaths per 10,000 registered passengers. The predicted rate attempts to take into account the age and sex of drivers involved and the car size. When actual death rates are lower than predicted rates, the car appears to be safer than expected.

O'Neill said differences in vehicle engineering and engine power probably account for the variations in predicted and actual death rates.

"We presume the Volvo did better than predicted because of its safe construction and design," O'Neill said.

The Volvo 740/760 had the lowest death rate while the Chevrolet Corvette had the highest. "We also presume the Corvette's performance leads it to get into more high-speed crashes," O'Neill said.

Sutton's comments stir Shreveport area

By Helen Kahn
SENIOR CORRESPONDENT

A Louisiana consumers group wants a Shreveport, La., radio station taken off the air because angry car dealers prompted the station to cut short a program that gave tips on buying a car.

A petition from the Louisiana Consumers League asks the Federal Communications Commission to deny renewal of the license of KRMD-AM/FM, owned by AmCom of Lousiana Inc. The petition was backed by the Media Access Project, a public interest group that promotes open access to the airways.

Media Access has outlined the following chain of events, based on radio transcripts and affadavits:

Last May, the Barksdale Federal Credit Union of Louisiana invited Remar Sutton to hold two seminars on how to buy and finance an automobile. Sutton, a syndicated columnist, former car dealer and credit union spokesman, appeared on a KRMD talk show after promising not to mention local car dealers by name.

Although Sutton kept the promise, one of the show's hosts invited comments from dealers. About 20 minutes before the end of the show, station manager Gene Dickerson called Sutton "controversial" and ordered him off the air.

Auto dealers had called in during the show threatening to cancel their ads.

Over the next two days, the station aired an editorial criticizing Sutton and encouraging listeners to support its dealer advertisers.

Sutton also had taped an interview to be broadcast a few days later, but it was never aired. Sutton's request for time to reply to the editorial and Barksdale's similar request were never acknowledged, Media Access said. Dealers did cancel ads, as they had threatened, it added.

According to Media Access Project, AmCom breached its public trust and used its "monopoly power over the airwaves to curry favor with its advertisers" through the editorial.

The station's Washington law firm — Arent, Fox, Kintner, Plotkin and Kahn — said the consumers league has shown "no supervening public interest considerations to justify Commission intrusion into AmCom's broad editorial discretion to terminate the interview."

SERVICE MANAGEMENT

Outsider to sell Ford accessories

By Francis J. Gawronski
AUTOMOTIVE NEWS STAFF REPORTER

In an industry first, Ford Motor Co. has awarded a contract for retailing car and light-truck accessories to an outside firm.

The accessory sales are being handled by Budco, a Detroit marketing and distribution company. The Ford agreement is Budco's first venture into retailing.

"This is the first time an automaker has allowed an outside company to engage in this type of accessories operation," said William A. Brian, owner and president of Budco. "We will be involved in the program from warehousing to order-taking via a toll-free 800 network to shipping to the customer."

Chris P. Hilton, of Ford parts and service division's product planning section, dealer parts and accessories merchandising department, said the program is designed to enhance the division's accessories sales program.

"This program gives us the last opportunity to get to the customers before they go to other outlets in the aftermarket," Hilton said. "This is not a one-year deal. We are committed to this program, but we will be watching how well the customer receives it."

Hilton said the new program was well received by the dealers and endorsed by the Parts Managers Advisory Council.

The agreement calls for Budco to distribute a catalog, listing more than 80 types of accessories, to more than 2 million customers of participating Ford and Lincoln-Mercury dealers, according to Brian.

Budco will purchase the accessories from Ford's parts and service division and sell directly to Ford and L-M customers.

According to Brian, participating Ford and L-M dealers, as identified by the customer's vehicle identification number, will share in a 50/50 split of the gross profits generated by the accessory sales. Hilton said the dealers' share of the profits will be credited in their monthly parts and accessories statements.

Brian projected first-year accessories sales at $8 million to $10 million. The enrollment fee for dealers consists of sharing the cost of mailing the catalogs.

Brian said 4,800 of the 5,500 dealers in the Ford Motor Co. dealership network have enrolled in the program. Those dealers account for more than 90 percent of the annual Ford, Lincoln and Mercury vehicle sales, he said.

To accommodate the inventory of 80 types of accessories, Budco purchased and refurbished a 70,000-square-foot facility and created 40 jobs. Brian said an additional $200,000 was spent on computer software development for the program.

Budco will receive telephone orders via a nationwide toll-free line. In most cases, Brian said, accessories will be shipped to the buyer within 24 hours.

"Although Budco will have wide responsibility handling Ford Motor accessories, we are not supplanting the dealer who chooses to sell these items," Brian said.

"But we are making it easier for the dealer to concentrate on other sales and service aspects and still share in the profits."

Budco also handles contract application and verification, time payments and national direct marketing for Ford parts and service division's Extended Service Plan; the direct-mail program for L-M's leasing operation; the transmission warranty program designed for the second owner of a 1987 or 1988 Ford Motor vehicle; and the Ford audio systems' radio rebate program.

Budco also prints and distributes owner's manuals and performs telemarketing for Chrysler Motors.

Budco employees Cherie Parker, left, and Linda Lacey sort Ford catalogs.

Shop work up 2.5% in Oct.

By Francis J. Gawronski
AUTOMOTIVE NEWS STAFF REPORTER

October service and parts business in new-car dealerships bounced back from the declines registered in the two previous months to top the volume recorded in October 1988.

According to the Automotive News Service Index, October's shop business rose 2.5 percent over that in October 1988. Shop business in August and September was down 1.3 percent and 4.7 percent, respectively, from the year-earlier volume.

Service and parts volume for the first 10 months of 1989 was 1.7 percent ahead of the business recorded in the same period a year ago.

The service index is compiled from figures on parts and service business supplied by a cross-section of new-car dealerships from across the nation.

A dealer in the Midwest said his shop business was up because "we did more advertising and our labor increased over October 1988," while a retailer in the South credited more new- and used-vehicle sales for better results during October.

A dealer in New England attributed his shop's good showing in October to an "increase in labor rates and the area's economy that is forcing customers to fix their present vehicles rather than trade."

A West Coast dealer blamed the downturn in business during October on the San Francisco earthquake that closed the dealership for three days.

Gross profit on all labor, parts and accessories — the most important indicator from the dealers' viewpoint — was up 3.1 percent in October and 2.9 percent for the 10-month period.

Sales of all parts and accessories rose 3.6 percent for the month and 0.8 percent for the year.

SERVICE INDEX 102.5★

	Oct., '89 vs. Oct., '88	Jan.-Oct., '89 vs. Jan.-Oct., '88
Gross Profit on All Labor and P&A Sales	+3.1%	+2.9%
Repair Orders Written	+0.8%	−1.9%
Total Labor Sales (Customer & Warranty)	−1.0%	+2.1%
Shop Parts Sales (Customer & Warranty)	+1.8%	−1.5%
Sales of All P&A	+3.6%	+0.8%

★ Survey by Automotive News shows that dealers' service and parts business in October 1989 was 102.5 percent of business in October 1988. Service business in the first 10 months of 1989 was 101.7 percent of business in the corresponding period in 1988.

Holograms battle counterfeit GM parts

DETROIT — General Motors has begun using holograms as a weapon in the Big 3's battle against auto parts counterfeiters.

For years, GM, Ford Motor Co. and Chrysler Motors have spent millions of dollars to find and wipe out counterfeit parts makers.

"Some of these (fake) packages are so good that even we can't tell if they're counterfeit," said Dan Elliott, director of GM security.

In addition to affecting an automaker's balance sheet, a counterfeit part of inferior quality could lead to problems, such as lawsuits.

In one such instance, a Massachusetts school district sued GM after transmissions in its buses failed. The district bought what it thought was GM transmission fluid which, it contended, led to the failures.

Tests showed that the fluid was a mixture of cheap oil and red dye, and GM was dropped from the suit. The fluid maker's operations were raided by federal marshals.

GM is stamping holograms on packages of brake pads and electronic ignitions for export. Holograms, which also have been used by credit card companies to deter counterfeiters, are difficult to duplicate because they are made by laser beams.

GM is using holograms that have the superimposed words "General Motors," "GM" and "Genuine" etched into a small rectangle on the outside of the package.

Elliott declined to say how much GM has lost on counterfeit parts, but he said the Mideast has the largest amount of bogus parts. He estimated that in the Mideast, about 40 percent of all parts labeled GM are fakes.

Ford and Chrysler officials also declined to say how much their companies may have lost to parts counterfeiters, but said raids at warehouses have turned up millions of dollars worth of fake components. Many of the fake parts are made and marketed overseas.

To fight the fakes, the Big 3 employ "sting" operations in which the bogus parts are bought and then turned over to authorities.

— The Associated Press

Emergency road service for Saab

ORANGE, Conn. — Saab-Scania of America has initiated an emergency roadside service.

The program is included in the purchase of every 1990 Saab and is transferable through the 36 month/36,000 mile new-car warranty.

If the vehicle is disabled 100 miles or more from home because of a collision or mechanical breakdown of any component covered by the warranty, Saab will reimburse the owner up to $1,000 for emergency expenses incurred within three days of the date of disablement.

SERVICE BRIEFS

Precision Tune grows

STERLING, Va. — Precision Tune has acquired National 60-Minute Tune of Bellevue, Wash., a tuneup and lubrication chain with 87 franchises in Washington, Oregon, Florida and Southern California.

Donald E. Ervin, chairman of the network of 500 franchised Precision Tune centers, said the acquisition gives Precision Tune a foundation to penetrate the entire Western market. He said the company will pay particular attention to Southern California, where it expects to franchise 250 Precision Tune centers in the next two years.

Sales for National 60-Minute in 1988 were about $11 million, while Precision Tune reported sales of $145 million.

Free movie promo

CLEARWATER, Fla. — Customers opting to have service work performed at Carlisle Lincoln-Mercury after 5 p.m. Monday through Thursday receive two free movie passes and transportation to and from theaters. Scott Wilkerson, general manager, reports increased service business from the free-movie program.

Selling car-care products

DES PLAINES, Ill. — Automobile Dealer Services has developed a program that is to explain the value of vehicle appearance protection and protection products to dealership salespersons.

According to Mark Rashkow, company president, dealerships hire Automobile Dealer Services to train salespersons to sell appearance protection products such as paint and fabric protection and rustproofing.

Rashkow said his firm conducts a two-day seminar for the sales staff. After that, it follows up two to four times a month to measure the performance of individual salespersons and provide reinforcement training.

The company trains people to sell the products; it does not sell them itself, he said.

Because of the success of the product training program, Rashkow said, the company is moving into sales training. Dubbed Workforce, the new service will screen, train and then place salespersons in new-car dealerships.

Arrow grows into Canada

FRAMINGHAM, Mass. — Arrow Automotive Industries has expanded distribution of its remanufactured parts into Canada.

Initially, the company, Arrow Automotive Industries of Canada, is offering starters, alternators, generators, solenoids, starter drives, distributors and wiper motors. Other lines will be added during the next 12 months, the company said.

Inventory is being handled through selected warehouse distributors, as well as by the Consolidated Parts Warehouse centers in Burnaby and Victoria, British Columbia; and Winnipeg, Manitoba. The parts are available through the traditional Canadian aftermarket channels.

Simonds honored

NEW YORK — Winners of the Awards for Achievement in Managing Information Technology include G. Nichols Simonds, executive director of management information service for Chrysler Corp.

The awards were co-sponsored by American Management Systems, Arlington, Va., and the Graduate School of Industrial Administration of Carnegie Mellon University, Pittsburgh.

Simonds was cited for his leadership in developing Chrysler's Service Bay Diagnostic System, which uses information technology to assist dealership service technicians in diagnostics and repair.

Simonds also played a central role in creating Chrysler's Performance Feedback System, which allows assembly-line personnel to identify a defect and then correct it at in-line upgrade stations before the vehicle leaves the plant.

Sales slide continues; cars, trucks off 4% in mid-month

By Philly Murtha
AUTOMOTIVE NEWS STAFF REPORTER

Mid-November sales of U.S.-built cars and light trucks continued the slide that began in October.

The 4.41 percent decline was less severe than the 20.22 percent sales plunge in the first 10 days of November.

Transplant car sales gains helped offset Big 3 losses. Also, three of the four U.S. light-truck makers reported increases in the second 10 days of November.

In mid-November, 248,259 vehicles were delivered compared to last year's 259,725. Both periods had eight selling days.

Of the four U.S. car and truckmakers, only Nissan increased sales over 1988. Nissan sold 35.67 percent more U.S.-produced vehicles this year.

Chrysler Motors' combined car and light-truck sales slipped 3.29 percent; General Motors' combined sales dropped 7.32 percent; and Ford Motor Co. sold 13.02 percent fewer cars and light trucks in mid-November this year.

Dealers said slack showroom traffic as well as sluggish regional economic conditions were responsible for the sales lag.

Traffic is down from last year, according to Bruce Kittilstved, sales manager of Roseville Chrysler in Roseville, Minn.

"There's no doubt that it is getting more competitive. It's taking longer to close a car sale," he said.

Sales continue to be soft at Houston Taylor Nissan in Fayetteville, Ark., because customers are "waiting to see what's coming" in new incentives, said Jim Helmert, general sales manager.

"We have 15 dealerships in this town, and in the last 15 days, seven sales managers were fired," Helmert said.

The eight U.S. automakers delivered 149,381 cars in mid-November, down 6.10 percent from last year's 159,082. It was the lowest total for the period since 1981.

All transplants had healthy increases. Toyota sold nearly four times as many U.S.-built Corollas and Camrys as it did a year ago.

Mazda delivered 44.89 percent more U.S.-built MX-6s, and Honda sold 29.71 percent more American-built Accords and Civics.

Nissan's sales of U.S.-made Sentras rose 19.50 percent. Mitsubishi, which did not make cars here a year ago, sold 990 Eclipse models in mid-November.

Each of the Big 3 sold fewer cars in the Nov. 11-20 period than they did last year.

GM's car sales were off 13.05 percent, although Cadillac reported a 9.02 percent gain. It was the only GM make to show an increase.

Ford sold 11.56 percent fewer cars even though Lincoln deliveries rose 31.56 percent.

DOMESTIC SALES

	Nov. 11-20, 1989	Nov. 11-20, 1988
CARS		
Eagle	832	1,248
Chrysler	3,601	5,412
Dodge	8,593	9,927
Plymouth	7,161	6,346
Chrysler Motors	20,187	22,933
Ford	27,419	33,755
Mercury	8,675	9,234
Lincoln	5,869	4,461
Ford Motor Co.	41,963	47,450
Buick	11,177	12,276
Cadillac	6,530	5,990
Chevrolet	25,475	25,901
Oldsmobile	11,079	15,080
Pontiac	12,077	17,044
General Motors	66,338	76,291
Honda	10,714	8,260
Mazda	978	675
Mitsubishi	990	—
Nissan	2,329	1,949
Toyota	5,882	1,524
U.S. Car Total	**149,381**	**159,082**
TRUCKS		
Chrysler	113	0
Dodge	12,356	10,443
Jeep	6,176	6,791
Plymouth	4,096	4,222
Chrysler Motors	22,741	21,456
Ford Motor Co.	32,863	38,581
Chevrolet	31,378	29,827
GMC	7,953	8,559
Oldsmobile	260	0
Pontiac	356	0
General Motors	39,947	38,386
Nissan	3,327	2,220
U.S. Truck Total.	**98,878**	**100,643**
U.S. Car-Truck Total	**248,259**	**259,725**

Chrysler's car sales slumped 11.97 percent. Plymouth, up 12.84 percent, was the only gainer.

In mid-November, Nissan, GM and Chrysler sold more light trucks than a year ago, but Ford's loss pulled the industry's total below 1988.

The four manufacturers sold 98,878 light trucks, down 1.75 percent from 100,643 last year.

Nissan's domestic light-truck sales rose 49.86 percent. Chrysler sold 5.99 percent more light trucks, and GM reported a 4.07 percent gain. Ford's light-truck sales fell 14.82 percent.

British court lifts DeLorean from lawsuit by liquidators

LONDON — Former automaker John Z. DeLorean, whose car company in Northern Ireland went bankrupt in 1982, has won a High Court order setting aside an English court order against him for more than $51 million.

Judge Peter Gibson overturned a July 1987 court order that allowed legal documents in the case to be served on DeLorean at his home in New Jersey, outside the jurisdiction of the English courts.

"It follows that all subsequent orders made against Mr. DeLorean will fall away," Gibson said.

The ruling was the latest stage in a dispute between DeLorean and the liquidators of DSQ Property Co., incorporated in Northern Ireland and formerly called DeLorean Motor Cars.

DSQ claimed damages against DeLorean, a former General Motors executive, for alleged conspiracy, deceit and breach of fiduciary duty, Gibson said.

In June 1988, the High Court entered a judgment against DeLorean ordering him to pay more than $51 million.

Gibson said DeLorean took no part in the English proceedings until this year, when DSQ sought to enforce the judgment in the United States.

On July 10, DeLorean asked the High Court to set aside the order allowing service in the United States and subsequent orders against him.

The application was opposed by DSQ, which went into receivership in 1982 and later into liquidation.

Gibson ruled that in DSQ's application to serve documents on DeLorean outside English jurisdiction, there had been "serious non-disclosures" of matters, including the existence of proceedings against DeLorean in the United States unrelated to DSQ.

DSQ must pay DeLorean's legal costs but was allowed to appeal Gibson's ruling, which was suspended pending appeal.

A federal judge in Detroit earlier this year ordered U.S. enforcement of the British default judgment. DeLorean appealed the ruling to the U.S. Sixth Circuit Court in Cincinnati, which had not yet ruled on the appeal when the London judgment was overturned.

In 1982, DeLorean was arrested in Los Angeles on charges of drug trafficking but was acquitted two years later of conspiring to distribute $24 million worth of cocaine in the United States in a bid to raise money for the failing car company.

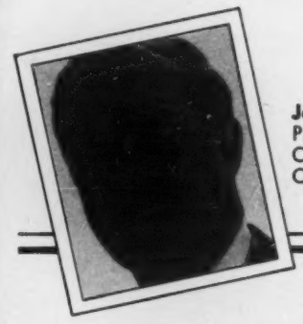
YUGO ...ON THE MOVE!



John A. Spiech
President and
Chief Executive
Officer

DEALER UPDATE!

Here are some important points about Yugo that you may have missed over the last few months:

- Yugo has kept Norauto cars off the market to protect dealers.
- Yugo has had an orderly sale of cars to the dealers without disrupting the retail market.
- Yugo has protected its customers and dealers by providing continued reimbursement of warranty claims on a timely basis.
- Yugo has maintained a consistent flow of spare parts.
- Yugo has restructured its organization to be more responsive to dealer needs.
- Yugo has protected the dealers in the reorganization plan, allowing active dealers to recoup all of their funds. Make sure you vote for the plan.
- Yugo has developed a new product line. The new models are coming. Cars that are right for the U.S. market...technically advanced with a high quality control level. I have personally held up production of the new Cabrio until the quality is right.
- In select markets, new dealers have been appointed to the Yugo family.

Zastava, the billion dollar company that manufactures Yugo, has been the key to the rapid turnaround of Yugo in the U.S.. Their commitment is the foundation for future Yugo sales success.

Even during these tough times Yugo has consistently outsold Peugeot, Sterling, Porsche, Suzuki cars and Alfa-Romeo; and for the month of October 1989, Yugo outsold Isuzu cars.

I am restating my commitment to Yugo America, Inc., Zastava and the active Yugo dealer network. I will continue my relentless pursuit to resolve Yugo America's current situation once and for all. I have put into place a solid business foundation that will make the Yugo America franchise profitable for all Yugo dealers.

TOGETHER WE ARE ON THE MOVE TO SUCCESS.

Vehicle trade deficit shows improvement

WASHINGTON — The U.S. trade deficit for passenger cars and light trucks improved 4.0 percent in August, helped by a 6.0 percent decline in the value of imports. The value of automotive exports fell 16.4 percent for the month, but from a smaller base.

The latest figures from the U.S. Commerce Department show the automotive trade deficit in August was $3.04 billion compared with a deficit of $3.16 billion in August of last year.

The annualized U.S. automotive trade deficit is running 5.1 percent ahead of last year at $45.4 billion. The deficit for the 12-month period ended August 1988 was $43.22 billion.

The number of passenger cars imported during August declined 17.0 percent from a year ago, falling to 278,972 units, with an estimated value of $3.03 billion. Imports of light trucks increased 4.9 percent for the month to 59,950 units, with an estimated value of $508.9 million.

The number of passenger cars exported during August fell 39.0 percent from a year ago to 29,176 units, with an estimated value of $357.1 million. The number of light trucks exported in August was virtually unchanged from a year ago, although the value of light-truck shipments increased 27.5 percent to $143.7 million.

The United States' weak export performance during August included a 20 percent decline in the value of passenger car exports to Japan, a 34 percent drop in the value of passenger car shipments to Canada and a 9.5 percent drop in the value of passenger car exports to countries labeled "others" by the Commerce Department.

The value of light-truck exports to Canada increased 31.1 percent during August but dropped 3.7 percent to other countries.

During the most recent 12 months, U.S. automotive exports have fallen 18.9 percent, from an annualized total of 921,552 vehicles as of August 1988, to 747,577 vehicles in July 1989.

Imports of cars and light trucks have also declined on an annualized basis, but from a much higher base. The number of vehicles imported for the year ended August 1988 was 5.30 million. That number fell to 5.15 million units in August 1989.

Imports of passenger cars from Japan were down 9.5 percent, and Japanese imports of light trucks fell 13.5 percent to 34,234 units for the month.

Imports of cars from Canada were down 4.8 percent, while Canada's truck shipments increased 40.4 percent.

West German passenger car imports increased by 0.3 percent in August to 14,684 units.

The number of passenger cars shipped from South Korea fell 75.8 percent in August to 9,741 units. South Korea shipped 40,294 units during August 1988.

Swedish car imports fell 44.4 percent to 2,134 vehicles in August.

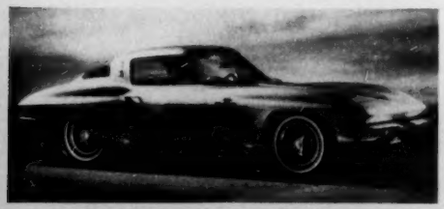
Mexico shipped 9,481 cars in August versus 13,300 one year ago.

Yugoslavia failed to export any vehicles during August.

Passenger car shipments from the United Kingdom were up 10.5 percent to 1,638 vehicles for the month.

Italy continued to boost imports significantly in August registering a 115.7 percent increase for the month. On an annualized basis, Italian imports are running 20.7 percent ahead of last year. France imported 77 cars in August compared to 1,961 in August 1988. French imports are 52.5 percent off last year's annualized tally.

Brazilian passenger car shipments were up 23.5 percent to 6,952 units in August, but down 33.6 percent when compared to August 1988.



The 1963 Sting Ray is a likely candidate for the museum Corvette buffs are planning.

Bowling Green may be site of buffs' Corvette museum

By Lindsay Chappell
AUTOMOTIVE NEWS STAFF REPORTER

A group of muscle-car buffs wants to build a Corvette museum near the car's home plant in Bowling Green, Ky.

The National Corvette Restorers Society Foundation is expected to consider a proposal from local officials next month that would include a public bond sale to help finance a 100,000-square-foot "Corvette-muscle car complex."

The 10,000-member group had asked General Motors for financial assistance but was turned down.

The proposed center would contain a museum for all Corvette models, displays of other vintage muscle cars, convention space, and the national headquarters for the society and possibly other automotive associations, said Darrel Bowlin, a Corvette Restorers Society board member.

A Bowling Green Chamber of Commerce task force is currently working to acquire 20 acres to donate to the museum. The task force is expected to approach the Corvette Restorers Society board of directors in January with a formal proposal.

Bowlin estimated the project would cost "less than $10 million."

The Bowling Green Corvette factory is one of the largest tourist attractions in Kentucky, drawing more than 45,000 visitors a year.

Bowlin said the society has projected that the museum will draw approximately 65,000 visitors in its first year and 100,000 annually in three years.

2-STROKE

FROM PAGE 1

and Nissan Motor Co. believe they've found a simpler, lighter, smaller and more fuel-efficient engine. But they also warn that two-strokes are not a panacea for all models — particularly if emissions standards are tightened excessively.

Other engineers — primarily in Japan — are building two-strokes that rival or exceed the mechanical sophistication of present four-stroke engines. Those experts are looking for size, fuel efficiency and emissions levels similar to those of a four-stroke four-cylinder or V-6 with the power and torque output of a V-8. Experts at those companies say the powerplants are suitable for "full-sized" trucks and luxury sedans.

Just as interesting is the list of automakers — some with high-volume two-stroke production experience — not developing two-strokes, or unwilling to reveal plans: Honda Motor Co., American Suzuki Motor Corp., Saab-Scania AB, Chrysler Motors, Daimler-Benz AG, Jaguar Cars, AB Volvo, BMW of North America, Audi of America, and Porsche AG.

GM and Ford researchers lean toward simple two-strokes without a conventional crankshaft-driven valvetrain, like two-stroke outboard and lawn mower engines.

The other school, Toyota Motor Corp., Mazda, Fuji Heavy Industries — maker of Subaru cars — and Peugeot S.A., is also looking for the high output and lower vibration associated with a power stroke every crankshaft revolution. But those researchers would like the higher fuel efficiency and lower emissions provided by a sophisticated valvetrain's tight control of intake and exhaust timing.

Some of these more complicated — and expensive — two-strokes even incorporate superchargers.

GM is cautiously optimistic about its two-stroke program according to Donald L. Runkle, vice president of GM's advanced engineering staff, and Roger A. Heimbuch, an executive engineer with that staff.

Heimbuch said a two-stroke engine in an entry-level vehicle would be a "default" application. "Really, we have greater expectations for this engine if certain things Ralph Sarich says about two-strokes prove out," Heimbuch said.

Sarich is president of Orbital Engine Co. in Australia, a leader in two-stroke engine technology.

Runkle said that hydrocarbon emissions and 100,000-mile emissions certification are concerns.

"The big benefits we see are packaging and weight," said Runkle.

Runkle and Heimbuch said a major benefit is styling flexibility because a two-stroke engine can be installed in virtually any position — perhaps even on its side under a rear seat.

GM and Ford have licensing agreements with Orbital Engine Co., which is owned by two publicly traded Australian companies, Broken Hill Proprietary Co., a widely diversified conglomerate, and Sarich Technologies Trust. Orbital is widely recognized for its advanced work on the simple two-stroke engine and the pneumatic fuel injection systems that make two-stroke engines environmentally viable.

Runkle downplayed the effect of pioneering Orbital technology at GM. But in May, Runkle said that GM was not able to make its two-stroke engine pass current and anticipated tailpipe standards. At that time, Orbital was claiming that its engines had already met the proposed new standards of 0.25 grams per mile hydrocarbons and 0.4 gpm nitrogen oxides.

"Sarich knew some things we didn't know," Runkle said. "I'd say they were two to three years ahead of us."

Heimbuch said GM currently operates about five vehicles powered by two-stroke engine concepts. GM will show a GM-developed two-stroke at the North American International Auto Show in Detroit in January.

Ian Macpherson, director of Ford's powertrain engineering office, said the company has not decided where it intends to use the two-stroke engine.

"It would probably be used in relatively small passenger cars," he said. "And, perhaps, a European application would be a better opportunity."

Macpherson said the preferred version of the engine is either a three-cylinder or a compact V-6.

"We're actively pursuing the concept," he said. "But it is not a forgone conclusion."

Chrysler Motors steadfastly refuses to comment on its two-stroke-engine program. Sarich said that talks between Chrysler and Orbital Engine broke off several months ago.

"Some makers aren't talking because they're not even in the ballpark," said a Chrysler spokesman. "But I can assure you that we're in the ballpark."

Nissan admits that it has researchers examining simple two-strokes for future applications.

Other Japanese makers that acknowledge work on two-stroke engines are Toyota, Subaru, and Mazda. And although other Asian makers are said to be working furiously on two-strokes, a curtain of silence covers their efforts.

Toyota Motor Corp. has been making news with its supercharged, four-valve two-stroke engines. There are two "S-2" engines: a gasoline and a diesel. Toyota sources hint that the company will use the 3- or 4-liter powerplants in a full-sized pickup or possibly even a luxury vehicle. Industry experts said Toyota could introduce a two-stroke as early as 1993.

"In the mid '70s, emission control was the most important issue. And that led to three-way catalyst," said Toyota Senior Managing Director Yoshiro Kimbara. "Now, there are new needs regarding the environment, and we must improve mileage efficiency. The next logical step is to make a lighter, smaller engine. The two-stroke engine, if you can make it viable, will get two times the output of a four-stroke."

Fuji Heavy Industries surprised a September SAE meeting by releasing information about its 1.6-liter V-4 two-stroke. The Fuji engine utilizes a screw-type supercharger, a wet-sump lubrication system, direct fuel injection, piston intake valves and rotary exhaust valves. Power is said to be in the 176-horsepower range.

A Subaru spokesman said he was unaware of any firm plans for a U.S. version of a two-stroke-powered vehicle.

Mazda has applied for a patent on a novel two-stroke engine that uses a complex breathing system with intake and crankshaft-driven exhaust valves, a scavenging port and a supercharger.

Peugeot S.A. and the Institut Francais du Petrole delivered a paper in July on a low-emissions two-stroke engine at the Second International Conference on New Developments in Powertrain and Chassis Engineering in Strasbourg, France. But so far, work is said to be limited to a single-cylinder concept engine.

TWO-STROKE PLANS OF CARMAKERS

Company	Engine project
General Motors	Simple, light, small, EFI
Ford	Simple, cheap, light I-3 or V-6
Nissan	Simple, light, small, cheap, smooth
Chrysler	Something, but no details
Toyota	Complex, supercharged, four-valve
Subaru	Complex, supercharged, 1.6-liter V-4
Peugeot	Complex, single-cylinder fuel-injected
Mazda	Complex, supercharged, crankshaft-driven valves

The following companies have no plans for a two-stroke engine: Honda, Suzuki, Saab Scania, Daimler-Benz, Jaguar, Volvo, BMW, Audi, Porsche

Toyota's 24-valve, six-cylinder two-stroke engine.

SALES

FROM PAGE 1

coff said he doesn't anticipate a dramatic December increase so much as he sees smaller decreases than in October and November.

Pitcoff cited high interest rates as the chief economic cause of sluggish car sales. He declined to predict when 1990-model sales will pick up.

The trend toward higher sales in December than in November is a recent phenomenon. December auto sales trailed November's each year from 1977 to 1984.

But from 1985 through 1988, December sales outpaced November sales.

The biggest gain was in 1986 on the eve of the change in the federal income tax law.

Also during the 1985-89 period, the greatest sales increase occurred in the final 10-day sales period in December (see charts on Page 1).

At the retail level, cash incentives have been used extensively. Ford Motor Co. has introduced new models in December — Taurus/Sable in 1985, Lincoln Continental in 1987 and Thunderbird/Cougar in 1988.

"Those who are in the (December) market are there because they are making either emotional buys or 'must' buys," said John McDonald, general sales manager for Chrysler Motors.

"The week after Christmas, however, the market really takes off."

Vacationers have time to kick tires, and dealers holding inventory from the previous model year have had strong year-end factory-to-dealer incentives.

One company trying a big December marketing push is Mazda Motors of America, which launched a $30 million "Race to the Record" campaign Nov. 20; it runs through Dec. 31.

The program includes special promotional events, television ads and cash-to-dealer incentives on all models except Miata, MPV and Protege.

George McCabe, Mazda group vice president of operations, said the move is to capitalize on recent December sales surges.

"We've had December programs since 1986," he said. "Each has been very successful. The dealers are supportive and optimistic."

Other manufacturers say they shy from an extra December sales effort, citing a wish not to exploit the holiday season.

"It is said it's difficult to compete with Santa Claus," said Volkswagen of America spokesman Tom McDonald.

Audi of America spokesman Joe Bennett was more succinct: "At Audi, we have a long-standing attitude that we don't try to compete with the birth of Christ. You don't try and milk it."

Companies that truly experience a sales boost are specialty marques like Alfa-Romeo and Porsche.

"For the most part, December is a terrible month because people are thinking about the holidays and are spending big bucks on them," said Alfa-Romeo spokesman Craig Morningstar. "But for us, yes, it's a good sales time — because of Spyders. Those are emotional purchases."

Porsche Cars North America spokesman Ed Triolo agrees with the emotional aspect of a yuletide treat.

"The holiday season for the past few years has been pretty strong for Porsche," he said.

"There are a number of reasons, but people do tend to purchase Porsches as rewards for themselves, so maybe that's got something to do with it."

Automotive News Staff Reporter Arlena Sawyers contributed to this report.

FIAT

FROM PAGE 1

In addition to Togliatti, Fiat supplied technology to auto plants in Poland and Yugoslavia.

Fiat and Elaz, a subsidiary of the ministry, will create a 30-70 percent joint venture to design, engineer, develop and produce a car code-named A93.

"Foreign investment wasn't possible in the Soviet Union before 1987," said Susan Lewenz, Soviet desk officer for the U.S. Department of Commerce in Washington.

"There had been some licensing and some co-production arrangements, and overseas products were sold, but it wasn't possible actually to own an industry in the Soviet Union," she said.

Romiti said talks on A93 began during the Italia 2000 exhibition in Moscow last September.

A93 will be sold in the Soviet Union with Fiat and Soviet labels. Fiat will import one-third of annual output for sale in Western Europe.

Engines and transmissions are not included in the deal. Fiat offered its integrated robotized engine and transmission, but the Soviets have not decided which components to use.

The joint-venture does not yet have a name. Pugin referred to it simply as "phase 2 of the Yelabuga program" to increase Soviet passenger-car output with three phases of around 300,000 cars a year each. All will be manufactured around Yelabuga.

The first phase will be Oka 2, a subcompact derived from the current Oka. The third will be a bigger sedan. Fiat is expected to cooperate on Oka 2 and the third phase.

Key management positions will not be reflected by the 30-70 split. Given Fiat's more advanced technology background, Italian personnel are expected to play a major role, at least in the first years.

Romiti and Pugin said A93 will be a two-box compact offered in three- and five-door models. It will be 136 inches long and weigh 1,400 pounds. The engine will be a four-cylinder of 1.0 to 1.1 liters.

If the Soviets decline the Fiat offer of the fully integrated robotized engine — produced in 999-cc and 1,108-cc versions — they will probably use the engine exhibited by the ministry at the Tokyo auto show in October. It is a 1,090-cc unit delivering 56 horsepower.

A93 is completely different from the Oka minicar currently produced in limited numbers in the Soviet Union. Fiat assistance with Oka 2 is mentioned in the agreement signed in Rome, but it is not part of the $1.35 billion deal.

The Soviet Law on the Cooperative System, effective July 1, 1988, established the legal and economic independence of joint ventures with foreign firms.

Pugin said his ministry is responsible for annual production of 1.3 million cars, 800,000 trucks, 500,000 farm tractors and 3 million bicycles and motorcycles.

The ministry embraces 800 companies employing 3 million people. It has total sales of 15 billion rubles ($23.8 billion) a year.

Pugin said current passenger-car production in the Soviet Union is around 40-45 percent of the country's needs. When the Yelabuga program's 1 million units is completed, the ministry expects to be able to meet 60 percent of the country's needs, he said.

Automotive News Staff Reporter Jim Henry in New York contributed to this report.

ABC

FROM PAGE 1

"The program made the entire dealer body look bad. The Dodge group is very upset," said Larry Roesch, owner of Chrysler-Plymouth, Chevrolet and Volvo dealerships in Elmhurst and Villa Park, Ill. "There are some dealers who do these things, but not many before they are out of business."

Dennis Guest, who owns Chrysler-Plymouth and Dodge dealerships in Chicago and Chicago Heights, respectively, said the Chicagoland Chrysler-Plymouth Dealers Association will pull about $35,000 worth of December advertising from WLS and move it to WGN-TV.

"On the morning after the show aired, we had an immediate reaction from customers," said Guest. "It was very negative."

A WLS spokeswoman last week said she was unaware of any complaints by area dealers about the program or of withdrawn advertising.

The National Automobile Dealers Association, which represents some 20,000 new-car dealers, sent a letter to *20/20* complaining that the program lacked balance.

Mark Hermann, a Yonkers, N.Y., auto dealer and NADA vice president, appeared on the program to defend after-sale items like extended warranties and rustproofing.

Herrmann was concerned that the program told viewers they should expect to be able to purchase a car for $100 over dealer cost. "I wanted to get the point across that for any vendor to sell a $10,000 to $15,000 product for $100 over his cost is ludicrous," he said.

Was the show balanced? "Absolutely not," said Herrmann. "My 30 seconds was the result of a 30-minute interview. I don't ask for equal time — just a fair amount of time."

NADA is making a tape of the entire *20/20* segment available to dealers who request it.

Carr, a former new-car salesman, set the tone of the program by saying, "Everybody on the planet earth who has bought a car, has gotten ripped off by a car salesman."

Dealers want to know why Carr left the business — and if he used some of the shoddy practices he cited on *20/20* and in his book.

One *20/20* sequence involved a hidden camera showing a finance and insurance manager waffling on questions from an undercover reporter on the interest rate for financing a new car.

The reporter asked if it would be 12 percent. The manager — waving a cigarette — said it would be near that figure.

When the finance rate ended up at 14.5 percent, the reporter suggested that the manager had misrepresented the finance rate the first time.

A spokeswoman for the *20/20* show said the program averages 20 million viewers. She declined comment on the segment.

An ABC network spokesman said there has been virtually no response to the program in letters or telephone calls.

Makers add, sweeten sales incentives

Several carmakers enhanced their incentive programs last week.

Subaru of America announced new cash-to-dealer incentives. It is offering $1,000 on the 1990 Legacy through Jan. 14, and through Jan. 3 dealers can earn $200 on the 1989 Justy with electronic continuously variable transmission.

Ford Motor Co. extended through Jan. 3 its dealer incentives of $250 to $750 on the 1989 Ford Ranger, $250 on the 1989 Ford Bronco II and $250 on the 1990 Ranger and Bronco II.

Chevrolet enhanced truck incentives by increasing the rebate on 1989 and 1990 full size Blazer and Suburban from $750 to $1,000, effective through Feb. 2. Also, the $500 incentive on the 1989 C-1500/3500 pickup and cab-chassis (2wd only) and 1989 Astro van has been extended to Feb. 2.

Buick's dealer incentive of $1,000 to $2,000 on the 1990 Reatta, Riviera and Park Avenue Ultra has been extended until Feb. 2.

Chrysler Motors boosted the customer rebate on 1990 Eagle Premier models. The payment on the Premier LX was increased to $1,000 from $700; the Premier ES rebate is $1,500, up from $700; and the Premier LTD payment is $2,000 up from $1,000.

Chrysler also is offering $6,000 to dealers and $1,000 to salesmen for sales of the 1989 TC by Maserati. Both programs run indefinitely.

The Volkswagen customer incentive program, which was expected to expire Nov.30, has been extended until Dec. 31. It includes $500 to $4000 cash rebates or financing ranging from 2.9 percent to 9.9 percent, depending on the length of the contract.

Customer and/or dealer incentives on 1989 and 1990 Mitsubishi and Audi models expired Nov. 30.

Rustproofer plans to file bankruptcy

Hap Hirsh, former owner of Florida-based Thermo-Guard Inc., said last week the company will seek protection under federal bankruptcy laws.

He declined to say when attorneys will file.

Hirsh, who says he now works for R&A Dealers Consultants in Florida, closed Thermo-Guard Sept. 29 after operating the rustproofing business for 12 years.

He said R&A Dealers Consultants, which opened days after Thermo-Guard closed, is owned by Robert Huggins, a former Thermo-Guard distributor.

OBITUARIES

Vernon D. Roosa

HARTFORD, Conn. — Vernon D. Roosa, 78, retired vice president of research and development for Standyne Inc., died Nov. 11.

Output rises in full week, but trails '88

By Karen Dotkowski
SPECIAL CORRESPONDENT

Last week's targeted domestic auto production totaled 128,332 units, 58.48 percent above the previous holiday week's build, but 21.75 percent below the year-ago week.

So far this year, 6,412,219 cars have been assembled, 2.87 percent below last year's production at this point.

Companies split last week's estimated production as follows: General Motors, 46.37 percent; Ford Motor Co., 20.25 percent; Chrysler Motors, 12.55 percent; Honda of America Manufacturing, 5.74 percent; Mazda Motor Manufacturing (U.S.A.) Corp., 3.49 percent; Toyota Motor Manufacturing U.S.A., 3.23 percent; Diamond-Star Motors, 3.18 percent; New United Motor Manufacturing Inc., 2.96 percent; Nissan Motor Manufacturing Corp. U.S.A., 1.81 percent; and Subaru-Isuzu Automotive, 0.42 percent.

Truck output was estimated at 84,781 units last week, 63.20 percent above the Thanksgiving week, but 13.49 percent below the year-ago week.

Year-to-date, 3,838,935 trucks have been built, down 0.36 percent from last year's build at this time.

GM will idle its Fairfax plant in Kansas City, Kan., the first two weeks in January to adjust inventories. The plant produces the Pontiac Grand Prix and is currently idled for inventory adjustment until Dec. 11.

GM's Doraville, Ga., plant is scheduled to resume operations today. The plant had been closed for two weeks due to slow sales of the Oldsmobile Cutlass Supreme.

Ford idled its Lorain, Ohio, plant last week and extended the closing an additional week, until Dec. 11, because of slow dealer orders of the Ford Thunderbird and Mercury Cougar. Ford will close its Dearborn, Mich., assembly plant today for one week due to lagging Mustang sales.

Chrysler closed its Jefferson Avenue assembly plant in Detroit last week until Dec. 18 to adjust inventories of the Plymouth Horizon and Dodge Omni. The plant is scheduled to halt production permanently early in 1990.

Chrysler's Toledo, Ohio, Jeep plant closed last week to adjust inventory. The plant is scheduled to resume output today.

Auto production rises in Canada

Canadian auto production was targeted at 25,083 units last week, 24.06 percent above the prior week and 36.71 percent above the year-ago week.

Truckmakers scheduled output of 19,090 units last week, 1.28 percent below the previous week and 8.12 percent below the year-ago week.

Chrysler's Brampton, Ontario, plant closed last week to adjust inventory of the Jeep Wrangler and is expected to resume output today.

Chevy plea fails to stir car orders

By Charles M. Thomas and Kathy Boyer
AUTOMOTIVE NEWS STAFF REPORTERS

Orders from Chevrolet dealers dipped so low in November that the automaker warned them in a special bulletin to buy more cars or see plants idled in January.

But dealers apparently didn't listen. General Motors last week announced the temporary shutdown of plants in both the United States and Canada due to dismal car sales.

November sales tumble, page 2

Chevrolet's urgent message to its dealers provides an inside look at the squeeze on GM's largest division.

"It is critical that all dealers immediately analyze their product needs and submit orders immediately," the bulletin said.

It went on to say that "adequate order banks are necessary to maintain uninterrupted production."

Dealers said the bulletin is unprecedented because it discloses scheduled January production figures compared with the dealer order bank as of Nov. 22.

Total scheduled production for seven Chevrolet car lines was 90,843 in January, according to the bulletin. Dealer orders stood at a paltry 24,130 on that date.

By contrast, orders for trucks exceeded scheduled January production. According to the bulletin, 81,384 Chevrolet trucks are scheduled for January assembly, though the dealer order bank totaled 105,952 trucks on Nov. 22.

But dealers say they can't order more cars.

"They have been sending out similar bulletins over the past few months," said Bob Kerpec, general manager and vice president of "Z" Frank Chevrolet in Chicago.

"Most dealers are bulked out," he said. "We appreciate what Chevrolet is trying to accomplish, but we can't be warehouses."

Kerpec said he has not received similar bulletins from the dealership's other GM line, Oldsmobile.

Edward Butera, general manager of New Jersey-based Warnock Chevrolet, said the bulletin was followed up by a phone call from Chevrolet's area market representative who implied that plants would be idled unless orders improved.

"We analyze inventory on a monthly basis, comparing it to sales," explained Butera. "If sales aren't there, then we don't order."

Butera, who didn't place an order, said the manufacturer should reduce production or launch more aggressive rebates.

Although the auto industry is nowhere near the dire state it was in earlier in the decade, the view at the end of the decade is grim.

Chevrolet, Pontiac realign engineers

Moves cut '84 reorganization

By Mary Connelly, Jack Keebler, Arthur Flax and Dutch Mandel
AUTOMOTIVE NEWS STAFF REPORTERS

DETROIT — In another retreat from its massive 1984 reorganization, General Motors has taken two divisions' engineering operations from the Chevrolet-Pontiac-Canada group and returned them to the divisional general managers.

Pontiac engineering came under John G. Middlebrook in November and Chevrolet is poised to place its engineering staff under the command of Chevrolet General Manager Jim Perkins next month.

In addition, Chevrolet will create market segment teams, similar to Pontiac's "work groups." Each team is responsible for a single vehicle line.

Pontiac's work groups are credited with helping to maintain a strong product image for the division.

"The hoped-for effect is that a chief engineer will no longer serve two masters," said a Pontiac spokesman. Pontiac and Chevrolet chief engineers had reported to the Chevrolet-Pontiac-Oldsmobile group.

"The whole organization brings a product to market with no surprises for a sales, finance, marketing or public relations department," the spokesman said. "Five years ago Pontiac defined itself with these groups. The result was a sharply focused product with the imprint of the entire organization on it."

Under the old system, engineers from the two divisions were limited to styling cues, powerplant tweaks and interior character of cars essentially developed by C-P-C and the Buick-Oldsmobile-Cadillac groups. Now, Chevrolet and Pontiac engineers will be involved earlier in vehicle structure and powerplant design.

GM, Ford may develop upscale channels in Europe

By Richard Johnson
AUTOMOTIVE NEWS STAFF REPORTER

FRANKFURT, West Germany — General Motors and Ford are considering separate upmarket distribution channels in Europe as an antidote to slow-selling high-line entries here.

"We're looking at various approaches on how to deal with that," said General Motors Europe President Robert Eaton. "It is very obvious to us as it is to the overall market that it is quite difficult (for a volume maker) to market a vehicle at that level."

Ford of Europe Chairman Lindsay Halstead said, "We have looked at second channels. We talked to Alfa Romeo. We talked to Saab. There is still another channel requirement, in my view, that is not totally fulfilled."

Halstead and Eaton were among seven European and Japanese chief executives interviewed for this week's special Overseas Focus section on pages 26-32.

NHTSA pushes for truck passive restraints

By Diana T. Kuryiko
AUTOMOTIVE NEWS STAFF REPORTER

WASHINGTON — NHTSA has sent Transportation Secretary Samuel K. Skinner a proposed rule that would mandate passive restraints on light trucks.

The proposal was revealed in a General Accounting Office report scheduled for release yesterday. In a position that is likely to be disputed by the auto industry, the investigative arm of Congress said technical and supplier problems are no justification for delaying passive restraints rules.

The standards are needed because trucks are increasingly used as passenger vehicles and need the same safety standards as cars, the report said. Automakers have equipped their 1990 cars with either air bags or automatic seat belts to comply with rules that took effect this model year.

The GAO also said the rulemaking could take several years to complete unless there is a substantial commitment from the transportation secretary and NHTSA to support it. It noted that passive restraints became mandatory on cars after a 15-year battle.

NHTSA delivered the rule to Skinner on Oct. 12. If the secretary approves, the rule will be published for manufacturer comment. NHTSA will then decide whether to move ahead, modify or abandon the rule. A final rule must go to the Office of Management and Budget for consideration and, if approved there, could become a standard upon publication as early as late 1990.

The GAO also said NHTSA is proceeding on three other light-truck standards. They involve strengthened side-door and roof protection and a high-mounted rear stop lamp.

Even without the federal rules, Ford Motor Co. plans to equip some vans with driver-side air bags by Sept. 1, 1991, the report said. Ford plans to have air bags or automatic belts on a "substantial portion" of its light trucks by the mid-1990s, said the GAO, which surveyed manufacturers late this summer.

Who owns Maserati?

AUTOMOTIVE NEWS / CHARLOTTE WINTER

Fiat Auto plays financial savior to Maserati

By Jim Henry
AUTOMOTIVE NEWS STAFF REPORTER

NEW YORK — Fiat Auto has come to the rescue of financially troubled Officine Alfieri Maserati S.p.A. in a deal expected to be consummated early next year.

Fiat will acquire 49 percent of Societa Maserati S.p.A., a newly formed company that will own the venerated Maserati name. The remaining 51 percent will be owned by Officine Alfieri Maserati.

The multifaceted deal is expected to bring Maserati out of debt, said Howard Chase, corporate secretary for DeTomaso Industries, which owns 84 percent of Officine Alfieri Maserati.

DeTomaso Industries, Red Bank, N.J., earlier reported a net loss of $8.14 million for the first nine months of this year. The company had a net loss of $29.4 million last year. DeTomaso Industries is a public company controlled by the DeTomaso family.

Chrysler owns 16 percent of Officine Alfieri Maserati through a subsidiary, Chrysler Italian Imports. Chrysler also holds about $38 million worth of Maserati corporate bonds. Maserati makes the Chrysler TC convertible.

Fiat did not purchase shares in DeTomaso Industries, Chase said.

Societa Maserati will manufacture and distribute Maserati cars through Maserati's existing dealer network. DeTomaso Industries owns Baltimore-based Maserati Automobiles, the U.S. importer and distributor. Through November, Maserati sold 260 cars in the United States compared with 716 in the same period last year.

Societa Maserati will also develop and produce new limited-production vehicles for Alfa Romeo, a Fiat subsidiary.

Alfa Romeo cars are sold in the United States through Alfa Romeo Distributors of North America, a 50/50 joint venture between Fiat and Chrysler. It is based in Orlando, Fla.

Chase said last week it is too early to say whether Societa Maserati's new Alfa Romeo products will be sold in the United States.

In addition to the Maserati and Alfa Romeo aspects of the deal, Fiat bought 51 percent of the stock of Innocenti Milano S.p.A., a Maserati subsidiary that makes Innocenti minicars.

At the same time, Fiat hired Societa Maserati to build 30,000 Fiat Pandas a year for three years beginning in 1990.

Lexus strives for perfect recall of flawed car

By Jesse Snyder
AUTOMOTIVE NEWS STAFF REPORTER

TORRANCE, Calif. — The Nov. 27 decision to recall 8,000 Lexus LS400 sedans triggered a frenzied week of activity at Lexus headquarters as employees scrambled to make the best of a painful and embarrassing situation.

A large ground-floor conference room and smaller second-floor room were in almost constant use while an impromptu crisis team hurried to complete plans to train and supply dealers to fix the problems before the recall had to be reported to NHTSA on Friday, Dec. 1.

Less than three months after starting to sell a $35,000 flagship model it advertised as a product of "1,400 perfectionists," Lexus was forced to recall nearly all 8,000 that had been sold. Two safety-related defects and loose battery cables were the culprits.

"Obviously, we would prefer not to have to do something like this," said J. Davis Illingworth, vice president and general manager of the fledgling luxury division of Toyota Motor Sales U.S.A. "It's been painful, but we've learned, grown, and we'll be better for it."

Illingworth said an internal investigation of the two safety defects stemmed from a single customer complaint in each case, reported in late September. No accidents or injuries were reported.

One reason for the recall is a deformed housing on high-mounted stop lamps.

Competing marketers of luxury cars were amused by the early Lexus recall. Lexus officials hope to create a silver lining for the cloud by giving extraordinary service, even sending mechanics to buyers' homes to make the fixes. (See related story, page 43.)

In late September, a Texas dealership reported that a customer's LS400 had a deformed housing for the high-mounted stop lamp, which misdirected the light. An internal investigation concluded that heat from the brake light and the atmosphere distorted the housing.

The solution: Use a plastic housing more resistant to heat.

The most serious flaw was a faulty cruise control reported by a California owner in late September through Lexus's 24-hour roadside assistance program.

The cruise control failed to disengage when the brake was applied. Worse, even shutting off the main switch still failed to disengage the cruise control.

Lexus's investigation determined that a manufacturing flaw in the cruise control actuator — made by Nippondenso, a leading Japanese automotive supplier partially owned by Toyota — caused the problem and posed the potential to affect all LS400s made so far.

The third problem was simpler.

Four LS400 owners called for roadside assistance because of dead batteries. Lexus discovered that in assembly, the battery cable was not always fully snapped on at the alternator.

The U.S. crisis team's effort was coordinated by Richard Chitty, corporate manager of parts, service and customer satisfaction.

Quickly, the group decided t combine all three problems int one recall.

One challenge was a self-im posed time limit.

"By law, we had five days (afte deciding on the recall) to notif the National Highway Traffi Safety Administration," said Il lingworth.

Toyota Motor Co. officials i Tokyo called Lexus officials i California on Monday, Nov. 2 confirming the problems and the causes. So NHTSA would have t be informed of the recall by Friday Dec. 1.

But before news of the reca broke, Illingworth said, Lexus ex ecutives wanted to have new par made, dealers trained and — possible — customers notified.

The crisis team met in groups three or four in a small office nex to Illingworth's normally reserve for visiting Japanese executives, c in a group of up to 10 in the large ground floor conference room.

They arranged for suppliers t work around the clock producin replacement parts and to ai freight them in small batches to th main Lexus parts depot in Tor rance. They scheduled those part to be repackaged immediately int smaller lots and shipped overnigh by Emery Worldwide to dealers.

They planned the training of ser vice managers and technicians fo

see LEXUS, page 4

November sales deal another fourth-quarter blow

By Philly Murtha
AUTOMOTIVE NEWS REPORTER

The U.S. auto industry continued to pay for late-summer incentive excesses last month as November car and truck sales continued the fourth-quarter plunge.

Total car and truck sales in November were off 11.84 percent as an uncertain economic outlook, high interest rates and the payback of 250,000 extra units sold in the third quarter took their toll.

Each of the Big 3 gave up car share to the Japanese automakers, but GM's contribution was most dramatic. A year ago, GM had more than 35 percent of the market. In October, GM's total car share hit a recent low of 31.94 percent, and in November it slipped to 31.84 percent.

The last full year in which GM's share was so low was in 1929, when the company had 32.76 percent of all car registrations.

The combined domestic and import car total of 682,801 lagged the disappointing October car sales total by nearly 65,000 units, and it represented a decline of 13.65 percent from last November.

U.S.-built car sales slid 14.21 percent, while imported car deliveries fell 12.37 percent below last year.

Sales have not recovered from the strong third quarter performance that was spurred by industry-wide retail incentives, but the fourth quarter slide may appear grimmer than it is. Some auto analysts estimate that 250,000 to 300,000 vehicles were sold ahead in the third quarter. Without the hefty summer incentives averaging about $1,000 per vehicle, these cars would have been fourth quarter deliveries. For the calendar year, total car sales are only 5.12 percent behind 1988.

The fourth quarter slide is not just payback, manufacturers and analysts said. "Some prospective buyers are deferring purchases due to uncertainty about the economic outlook," said Robert L. Rewey, vice president, sales operations, Ford North American Automotive Operations, Ford Motor Co.

That uncertainty is fueled by high interest rates, he said, adding, "The best news the au market could get would be a lowering of inte est rates."

Jay I. Stark, executive director of the G marketing and product planning staff, sa things could be worse. "We've been throu tougher times," Stark said.

"We've been through the oil embargo in 197 we've been through OPEC 2 and the situatio with the Shah of Iran in 1979. We're certain not looking at anything like those times."

He said current sales performance was no i dicator of what GM expects to do in 1990.

"We still see an opportunity for expansion our share. . . . Trucks were pretty good in N vember.

" We think our car share will be aided later the (1990) year with the introduction of son new products."

GM Chairman Roger B. Smith earlier sa 1990 will be the "Year of the General," and h expects GM to post 37 percent passenger c penetration.

Detroit automakers find friend in Skinner

By Diana T. Kurylko
AUTOMOTIVE NEWS STAFF REPORTER

WASHINGTON — Detroit may have made a new friend in Washington — Transportation Secretary Samuel K. Skinner.

After two full days of touring auto plants and hearing Detroit's concerns, Skinner said he was convinced Detroit should not be put at a competitive disadvantage by its own government. The transportation secretary made visits to the motor capital and met with the chairmen of the Big 3 in October and November.

Skinner

Skinner's pledge is important because the secretary will play a vital role as the Bush administration considers whether it will push for a change in corporate average fuel economy rules.

The Big 3 have bitterly protested that CAFE legislation puts them at a disadvantage because under current rules they must meet two CAFEs, a foreign and domestic. That means fuel-efficient small imported cars cannot be used to offset the less efficient big cars that drag down a manufacturer's domestic CAFE. The current standard is 27.5 mpg for both.

The transportation and energy departments have begun to study CAFE, and it is too early to predict what recommendations will be made to the Bush administration, Skinner told reporters last week.

But Skinner said he has promised to work with the Big 3 "within the bounds of the law" and at least give manufacturers early warning as to what to expect from Washington. The more automakers know about pending legislation, the better they can plan a competitive lineup, Skinner said.

"For a new model, it's a $2 billion to $3 billion expenditure and a five- to six-year cycle. They need to know in the early years, what they're going to be required to do in the out years," Skinner said.

Foreign manufacturers can react more quickly than the domestics with new engine and safety technology and meet higher CAFE standards or safety mandates, Skinner said.

"If they have a planning cycle in Japan of five years and we have one of seven years, that is a major difference," Skinner said.

Corrections

- The Dec. 4 issue incorrectly reported that the National Automobile Dealers Association would make the *20/20* news show segment called "Secrets of the Car Salesman" available to dealers who request it. NADA is making the tape available only to certain key manufacturing people.
- A Dec. 4 story should have said Yugo America's 1990 models will be equipped with non-motorized seat belts, not motorized belts.
- The warranty coverage listed for Isuzu and Mitsubishi powertrains in the Nov. 27 issue's warranty table was incorrect. The warranties are five years/unlimited mileage. Also, Cadillac's extra drivetrain/major component warranty is four years/50,000 miles.

AMC purchase pushes Chrysler to sell jet, defense units

By Mary Connelly
AUTOMOTIVE NEWS STAFF REPORTER

DETROIT — Chrysler Corp.'s decision to shed its aerospace and defense subsidiary is at least in part fallout from its 1987 purchase of American Motors.

Chrysler last week said it is exploring the sale of Chrysler Technologies, which is composed of Gulfstream Aerospace, Electrospace Systems and Airborne Systems. Gulfstream builds business aircraft. Electrospace and Airborne are defense electronics operations.

Chrysler's about-face from the diversification strategy it adopted in 1985 recognizes that the AMC purchase enlarged Chrysler's automotive operation and diminished the impact of Chrysler Technologies Corp. on earnings.

The AMC purchase also saddled Chrysler with the need to develop a third automotive division and launch a fourth car line — the Eagle brand.

To make corporate diversification meaningful in the 1990s Chrysler would have had to increase its holdings in Chrysler Technologies.

That option apparently became increasingly unattractive to Chrysler executives who were seeking to slash $1 billion in costs and struggling to build vehicle share in a sluggish market.

Chrysler Technologies reported net earnings of $45.6 million on sales of $1.28 billion in 1988.

That represented only 4.3 percent of total Chrysler sales and 6.4 percent of net earnings last year.

"Technologies is a billion and a half a year (in revenues)," Chrysler Corp. Chairman Lee Iacocca said in an October interview.

Gulfstream Chairman Allen Paulson is interested in buying the company.

"It should be $5 billion. That may require acquisitions and the like but in a time of stress in the auto industry we aren't prepared to put more capital against that."

Instead, last week Chrysler said it will explore the sale of Chrysler Technologies to concentrate on its car and truck operations. Chrysler has a $15 billion five-year capital spending plan and intends to replace all of its cars within five years.

"We can only spread ourselves so far in terms of our resources and our capabilities," Chrysler Corp. Vice Chairman Gerald Greenwald said last week.

"When we bought American Motors, whether we liked it or not, we became overnight a much bigger automotive company with a lot more responsibilities and the need to do a lot more consolidation. We think it is in our best interest to focus more directly on our now bigger car and truck business," he said.

Chrysler took pains last week to stress that the proposed sale is not related to cash needs.

Greenwald said Chrysler closed the third quarter with about $3

Porsche names Bohn successor to Branitzki

By Walter Hoenscheidt
SPECIAL CORRESPONDENT

STUTTGART, West Germany — Porsche AG has named the man to replace Chairman Heinz Branitzki when he retires on March 9.

He is Arno Bohn, deputy president of German computer manufacturer Nixdorf AG from 1986 to May this year. At 42, he will be Porsche's youngest president.

The announcements were made last week by Ferry Porsche, chairman of the Porsche supervisory board.

At the same time, Porsche confirmed two supervisory board changes. Michael Piech, a lawyer from Vienna, and Ferdinand Alexander "Butzi" Porsche, head of Porsche Design, will join the board, replacing Klaus Luft, former president of Nixdorf, and Konrad Eckert, a member of the Robert Bosch GmbH management.

Luft is the person with whom Bohn clashed before leaving Nixdorf.

Bohn began his career at Nixdorf and became marketing director. He

Arno Bohn: Porsche's next president

was appointed to the Nixdorf board in 1978 at the age of only 31, but he left in May because of differences with Luft. Since May he has been furthering his studies at Harvard.

Luft left Nixdorf three weeks ago after several years of losses.

Branitzki, 61, is the longest serving member of the Porsche board of management. He was appointed director of finance in 1964 and deputy president when Porsche was transformed from a private to a public company (AG, or Aktiengesellschaft) in 1972.

Branitzki wanted to retire two years ago but was persuaded to stay on by Ferry Porsche when he fired Peter W. Schutz in 1987.

TRADE OFF: *European Commission seeks U.S.-like restraint agreement with Japanese*

By Richard Johnson
AUTOMOTIVE NEWS STAFF REPORTER

FRANKFURT, West Germany — The European Commission will seek a U.S.-like voluntary restraint agreement for Japanese auto imports after 1992, when Europe drops internal trade barriers. The restraint would remain for an undetermined transition period, and it would not limit sales from Japanese-owned plants in Europe.

With an external trade policy now outlined after a long delay, the commission can begin negotiations with the Japanese on details, including the limit on import levels.

The deal is seen as a compromise between strong anti-protectionists such as EC Internal Market Commissioner Martin Bangemann of West Germany and officials in Italy and France, who have called for tough limits on the Japanese.

The commission said the transition period is needed to allow European manufacturers to adjust to the increase in Japanese penetration that is expected to coincide with the breaking down of EC market barriers and the resulting end to national restrictions.

EC External Affairs Commissioner Frans Andriessen said the commission does not intend to establish minimum local content rules for new Japanese plants being set up in Europe.

The commission will not seek strict reciprocity with Japan, as sought by Peugeot SA Chairman Jacques Calvet and others. Instead, it is calling for further opening of the Japanese market in all sectors.

(Calvet is interviewed on this and other matters on page 32.)

World Congress slates Hudler, Roberts, Damoose, Keller

DETROIT — The Automotive News World Congress will wrap up Wednesday, Jan. 10 with speeches from representatives of two automakers, one truck maker and an automotive analyst.

Attendees will hear from: Donald Hudler, vice president of sales, service and marketing for Saturn Corp.; Roy Roberts, vice president and general manager of truck operations at Navistar International Transportation Corp.; John Damoose, vice president of Dodge car and truck division; and Maryann Keller, vice president of Furman Selz Mager Dietz & Birney.

Register for World Congress, page 21

The 14th World Congress, held in conjunction with the North American International Auto Show, will be held Sunday through Wednesday, Jan. 7-10, at the Westin Hotel in Detroit and is expected to draw industry leaders from around the world.

Hudler

Roberts

Damoose

Keller

O'Neal

Arnold Palmer Automotive Group President James O'Neal will speak during the Monday morning session. He replaces NHSTA Administrator Jerry Curry who will speak Monday evening.

O'Neal heads the largest dealer organization in the United States. It has annual revenue of $1.3 billion and 100,000 new-unit sales.

Hudler has been in his present position with Saturn since 1987. He joined GM in 1956. In 1963 he transferred to Cadillac as a zone merchandising representative in Philadelphia. After several promotions, Hudler moved to Detroit in 1973 and was named national merchandising manager. Three years later he was appointed Northeast regional manager.

Beginning in 1980, Hudler spent three years in Madrid, Spain, as Adam Opel AG's regional marketing manager for Central and Southeastern Europe. He returned to Detroit in 1983 as director of marketing policy and dealer relations and was named to his present position in February 1987.

Roy Roberts joined Navistar in 1988 as vice president and general manager of truck operations.

He came to Navistar from GM, where he served 11 years, most recently as vice president of personnel administration.

Before this assignment, he was plant manager of GM's Tarrytown, N.Y., assembly facility. At Tarrytown, Roberts transformed the plant from a site slated by GM for closure to a top-rated facility within its division. Subsequently, Tarrytown was chosen as the manufacturing location for the Chevrolet Lumina APV, Pontiac Trans Sport and Oldsmobile Silhouette models introduced this year.

TRUCK INDUSTRY

Medium, heavy sales headed for slowdown

By Joseph Bohn
AUTOMOTIVE NEWS STAFF REPORTER

Truck industry officials are looking for a slowdown in the medium and heavy truck segments next year, though there's considerable uncertainty over how protracted it may be.

The American Truck Dealers, a division of the National Automobile Dealers Association, for example, has projected calendar 1989 U.S. Class 8 sales at 142,000 and calendar 1990 at 125,000.

But Bob Young, manager of American Truck Dealers' 20 Group dealers, said, "This is a crazy world right now. So many things are happening. If they start working on the defense budget, a lot of things can happen in the economy, and some of it pretty good.

"Lower interest rates would help capital investment and housing. It's too early to crystal ball that part of it."

Freightliner revised its forecast for 1989 U.S. Class 8 upward to 137,000 and is projecting calendar 1990 at 130,000.

Ford Motor Co. projects total medium-heavy Class 4-8 sales at 290,000 for calendar 1990, down 6.45 percent from a projected 310,000 this year.

That includes about 130,000 Class 6-7 truck sales in 1990, down from a projected 142,500 this year.

Net new orders for heavy-duty models totaled 10,092 in October, down 19.41 percent from 12,523 in the year-ago month.

The order rate in October was up 13.31 percent from 8,901 in September and 59.00 percent from the severely depressed 6,347-unit level in August, according to Deutsche Bank Group.

Frank Prezelski, a financial analyst with Deutsche Bank, projects U.S. Class 8 sales at 125,000 for calendar 1990, down from an estimated 140,000 this year.

"We caution that year-over-year comparisons for the next several months are likely to be very negative, although they may continue to show the gradual upward monthly pattern that has been in evidence. This is because they will be comparing against the super-heated order environment of the last two months of 1988 and the first month of 1989," Prezelski said.

"We now expect that the first positive year-over-year comparison in truck orders will occur in March or April of next year," he added.

The industry has cut its production in response to slower orders.

As a result, build rates are catching up to the order trend, Prezelski said.

This, in turn, means that backlogs of unfilled orders appear to be stabilizing at levels "slightly higher than our earlier anticipations of 42,000 units. We would not be surprised to see further backlog deterioration, even if orders continue their moderate upward movement, and they may very well decline to about the 35,000-unit level."

Mazda MPV rated tops in its class

After its first year on the market, the Mazda MPV has been rated as highest in its class in J.D. Power and Associates' most recent Compact Truck Initial Quality Survey. MPV buyers experienced fewer problems with their vehicles in the first 60-90 days of ownership than competitive compact sport-utilities.

Eaton offers warranties of 7/750,000 on drivetrains

By Joseph Bohn
AUTOMOTIVE NEWS STAFF REPORTER

SOUTHFIELD, Mich. — Heavy-truck drivetrain warranties, which have been lengthening during the past several years, recently got a further boost from Eaton.

The company has come out with seven-year/750,000-mile warranties on some of its transmissions, drive axles and non-drive axles and brakes.

Roger Hobbie, Eaton national service manager, said the new warranties result from improvements in the company's products.

To some degree they are driven by the increasing competition among Eaton, Dana and Rockwell, all of which have elected to become complete heavy-truck driveline suppliers and have begun encroaching on each other's traditional sales strongholds.

The new expanded Eaton Roadranger warranties cover 100 percent parts and labor on applicable components sold beginning in November.

The company's basic warranty provides three-year/300,000-mile warranty coverage on its on/off-highway Eaton Fuller heavy-duty manual transmissions, the 8600 series-and-above, as well as most of its tandem drive axles, steer axles and brakes, including its new heavy duty and severe duty extended service brakes.

A free five-year/750,000-mile on-highway warranty has been expanded to include virtually all 7-, 8-, 9- and 10-speed Eaton Fuller transmissions, while adding coverage for DS341 tandem axles and its new ES-150 extended service steer axle brake.

The company also is offering additional seven-year/750,000-mile coverage on its 7-, 8-, 9- and 10-speed transmissions as well as various on-highway drive axles, steer axles and brakes.

Components warrantied under this plan, as well as specialty on-highway and on/off highway transmissions covered by an optional five-year/500,000-mile warranty, require either Eaton's special synthetic lubrication or a brand recommended by the company.

Extended warranties on the specialty transmissions, such as the 8LL, 13, 15, 18-speeds and 9-speed B-ratio models, also are available for an extra $275.

TRUCK BRIEFS

Mack adds transmissions

ALLENTOWN, Pa. — Mack Trucks has introduced two lightweight, heavy-duty transmissions to complete its conversion to a full line of T200 series transmission designs.

The new 13-speed T2130 and 18-speed T2180 are geared to all heavy-duty on- or off-road truck applications that require the flexibility of multiple-speed configurations.

They complement Mack's current selection of 5-, 6-, 7-, 8-, 9- and 10-speed T200 models. Both new transmissions have a "range and splitter" design. They feature an overall range of 19.59:1, with torque capacity ratings of 1,700 pounds-feet.

The 13-speed T2130 has a low gear ratio of 13.91:1 and an overgear ratio of 0.71:1, with gear steps of 18 percent in the top gears and 40 percent in the low gears.

The new 18-speed T2180 has the same low gear and overgear ratios as the T2130, with the addition of five intermediate low gears. The average gear step through all 18 gears on the T2180 is 18 percent.

Hino parts plan

ORANGEBURG, N.Y. — Expanding its remanufactured parts program, Hino Diesel Trucks has begun offering relined brake shoes.

The company recently began offering remanufactured starters and alternators.

All parts are backed by the company's remanufactured parts warranty and are available through its dealer network.

Rockwell's composites

CHARLOTTE, N.C. — Plastic composites are being used more extensively in exterior body panels on medium and heavy trucks, as evidenced at the SAE Truck and Bus Meeting and Exposition.

Rockwell International exhibited two huge truck hood and fender assemblies made of sheet molding compound.

One of them recently went into production on General Motors' new line of medium-duty models, the GMC TopKick and Chevrolet Kodiak.

The other hood-and-fender assembly was developed for Mack's recently introduced CH600 heavy-duty series.

Aram Najarian, vice president and general manager of Rockwell's plastic products businesses, noted that most major North American truckmakers are switching from steel to fiberglass-reinforced plastic hood-and-fender assemblies to enhance vehicle styling, aerodynamics and cost efficiency.

The company also displayed a new compression-molded thermoplastic instrument panel specifically for heavy-duty trucks.

The composite instrument panel, being supplied to Volvo GM Heavy Truck for its Class 8 models, was developed by the Butler Polymet unit of Rockwell's plastic products businesses.

The instrument panel is compression molded from glass mat thermoplastic compound that has a 40 percent fiberglass content.

Kenworth locator plan

KIRKLAND, Wash. — Kenworth Truck launched a National Used Truck Locator program to help fleets find used company models.

Many fleets buy exclusively used vehicles. Typically, 40 percent of the Class 8 trucks purchased in a given year are used, according to Jon Wyman, Kenworth's national used truck manager.

Under the program, each Kenworth dealer participating in the program will have his used trucks listed in the company's central computer.

The will enable each dealership to pull up any used truck available in the system, Wyman said.

He said that more than 3,000 used trucks will be included in the data base, ranging from short-haul and over-the-road models to construction and logging vehicles.

In addition to dealer inventories of used trucks there will be a selection of clean, well-maintained finance lease units listed from PACCAR Financial and full-service lease units from PACCAR Leasing for purchase through Kenworth dealers.

Canadian sales slip 6% in Oct.

By Bill Vance
SPECIAL CORRESPONDENT

TORONTO — Canadian car and truck sales declined nearly 6 percent in October as a healthy increase in imports was not enough to offset a decline in domestic volume.

Domestically built cars were off 16.9 percent from October 1988 levels. Although imports were up 20.7 percent, it was not enough to prevent total car sales from dropping 6.92 percent.

On the domestic car side, General Motors of Canada and Chrysler Canada suffered the most, down 22.48 and 21.59 percent, respectively. Ford of Canada slid 12.2 percent.

Canada's continuing high interest rates — last week's prime rate was 13.5 percent — were blamed as a strong factor in slowing sales. Udo Kaul, Ford's general sales vice president, put it this way: October's "sales decrease again illustrates how high interest rates can put the brakes on car and truck sales — and how interest support programs remove that barrier to continuing strong sales." Ford has been offering interest rates as low as 6.9 percent on selected models.

GM's marketing vice president, Bill Atkinson, echoed Kaul's sentiments: "There can be no doubt that high interest rates have had an adverse effect on the automobile industry," he said. But he said despite a general slowdown in passenger car deliveries, GM's small cars were a bright spot.

The Chevrolet Sprint was up 68.0 percent, the Pontiac Firefly, 98.4 percent, the Chevrolet Corsica, 44.3 percent, and the Pontiac Tempest, 53.7 percent. It was a record October for these car lines.

GM's small-car success continued on the import side, showing a 79.53 percent gain over last October.

Strong import sales increases also were made by Ford, Mazda, Nissan, Subaru, Suzuki and Volvo. Luxury imports Jaguar, Mercedes-Benz and BMW all lost ground, while Saab showed slight improvement.

For the year, total car import sales are up 2.3 percent, while domestic car sales are off 8.36 percent.

The car sales pattern carried over into the light-truck and van field. All domestics showed a loss for the month, while six of the eight importers registered gains.

Substantial improvements by GM, Mazda, Nissan and Toyota helped push imported truck sales 59.38 percent ahead on the month.

Total vehicle sales slipped 5.65 percent for the month. They are down 4.12 percent on a year-to-date basis.

Canada's AHA Automotive to help design prototype

BRAMPTON, Ontario — AHA Automotive Technologies Corp. announced that it has been awarded a contract by Dutcher Corp. of San Marcos, Calif., to assist in the design and development of a prototype paratransit vehicle.

Dutcher developed its initial paratransit vehicle in 1984 and began limited production in 1986. Since then, Dutcher has been seeking a manufacturer to mass produce its vehicle under contract.

The Dutcher prototype is a purpose-built vehicle, not a van conversion. It will accommodate seven passengers or four passengers and two wheelchairs. The vehicle is powered by a 3.8-liter, V-6 Buick engine mounted in the rear.

'90 Montreal auto show moves to stadium site

By Alex Law
STAFF CORRESPONDENT

Montreal's Olympic Stadium will be the site of Canada's first auto show of 1990.

After more than 20 years in a downtown hotel convention center, the Montreal International Auto Show will move to the suburban stadium for the Jan. 11-21 exhibition.

The change will give the show increased display space and is expected to help boost attendance by 25 percent from the usual 200,000 to 250,000 persons.

Show organizer Diane Bellair said the space available for the 32 manufacturers and the 650 vehicles they will display will be increased 42 percent over last year's event. Most of that will be taken up by light trucks in a newly designed truck center.

At the same time, the space for the 50 aftermarket accessory exhibitors will increase by 190 percent.

The show also plans to enlarge the space set aside to such attractions as classic cars.

Bellair said that to bring true the show's "Unveil the 90s" slogan, the manufacturers are promising to deliver more Canadian premieres than ever before.

On that list will be several General Motors models including the expected Canadian debut of the 1991 Chevrolet Caprice and four-door Chevrolet Blazer/GMC Jimmy.

Ford's 1991 Escort and Explorer will be displayed at the Montreal show, as will the Toyota Lexus and Nissan Infiniti, Hyundai S-Coupe, Toyota Previa and MR2, BMW 850i, and Volkswagen Passat.

BMW's 850 makes its Canadian debut at the Montreal International Auto Show. The coupe's 12-cylinder engine puts out 300 horsepower, and acceleration from 0-to-62 mph takes less than seven seconds.

trail 1988 by 5.12 percent.

November's sales are worse. They declined 13.65 percent from the same period a year ago.

Even production forecasts for the first quarter are bleak. U.S. automakers predict an 8 percent slide in production compared with the first three months of this year.

Car assembly is projected at 1,745,039 units for the first quarter of 1990. Of that total, Big 3 output will fall 14.59 percent while the Japanese makers' domestic build is scheduled to climb 30.00 percent over the first quarter of 1989.

Normally, production schedules undergo several revisions from original forecasts. But this quarter, the forecast appears to be in line with the sluggish sales outlook.

To keep production in line with sales, GM has extended the holiday vacation by as much as nine days for some workers and four days for others.

In Canada, GM announced last week it will idle three assembly plants in January because of sagging U.S. sales.

Also, GM plans to lay off 350 second-shift workers indefinitely at its engine plant in St. Catherines, Ontario, effective Jan. 15. In all, GM will furlough roughly 17,600 workers in Canada.

Meanwhile, transplant and joint-venture carmakers expect to assemble 358,039 cars during the first quarter, about 82,600 units more than this year's first quarter.

Honda of America Manufacturing helped boost the total with the addition of its new plant in East Liberty, Ohio. Pilot production of the Civic four-door sedan is currently under way and about 6,000 of those East Liberty Civics are included in Honda's first quarter schedule. Subaru-Isuzu will assemble about 5,600 cars at its Lafayette, Ind., plant in the first quarter of 1990.

Automakers recently revised their fourth quarter production schedules downward by almost 39,000 units. With only weeks left, assembly is now targeted at 1,617,162, 14.81 percent below the 1,898,220 units built in last year's fourth quarter.

Rick Kranz, chief editor of the Automotive News copy desk, contributed to this report.

FIRST QUARTER AUTO PRODUCTION SCHEDULE, U.S.

	Projected 1990	Actual 1989	% change
GM	730,000	883,785	-10.61
Ford	405,000	486,443	-16.72

Ford, Japanese firm plan U.S. glass venture

DEARBORN, Mich. — Ford Motor Co. said that its glass division plans to set up a joint venture with Central Glass Co. of Tokyo to supply glass to Japanese transplants in the United States.

The glass, supplied by Ford glass division plants, will be fabricated into windshields and side windows at a new greenfield joint-venture plant, probably in the Mid-South near Japanese transplants, a Ford spokesman said. Central Glass will own 51 percent of the joint venture and Ford 49 percent.

Ford and Central Glass hope to begin operations in the second half of 1991.

GM-FORD

FROM PAGE 1

executive-class models have had difficulty competing in segments dominated in Europe by established prestige-car specialists. And the coming Japanese upmarket thrusts intensify the problem.

GM's Opel and Vauxhall offer the Senator sedan that is derived from the upper-middle range Omega/Carlton. The car has been well-received by the automotive press, but sales have been disappointing since its 1987 launch. Ford has had similar problems with Scorpio/Granada.

Eaton said it would be a "three-to four-year proposition" to launch a second channel. He also said it would be difficult to support a separate franchise with only one vehicle and that co-development of Lotus versions of Opel/Vauxhall models is a possible source of products for such a network.

GM has not decided to go forward with the idea, Eaton said. If it does go ahead, he said, the franchise would not necessarily extend to the United States.

GM sources in Europe say that before Ford bought Jaguar, GM hoped to create a marketing joint venture with the British company that would have sold a smaller Jaguar competing in the BMW 5-series segment.

Ford has likewise found the going tough with its Scorpio against the likes of Mercedes-Benz and BMW. There has been some speculation in Europe that Ford might not need Scorpio now that it has Jaguar to compete in the luxury segment.

But Halstead said, "The thought never entered my head." He added, "There is a big gap. The Scorpio segment is going to have to stay in the Ford line. It's far away from Jaguar.

"We still need some upmarket cars before we get to Jaguar. We certainly keep looking at it. I don't have a firm plan. That was one of the reasons we were talking to Saab and talking to Jaguar at the same time. They both would have been viable. And the need is still there." Ford talks with Saab broke off in October.

Ford's European marketing staff has also conducted studies of all-new high-line franchises for Europe. Like GM, Ford has concluded that it would need more than one model to support a new franchise.

Scorpio is expected to be replaced in the mid-1990s on a platform primarily engineered in the United States. A notchback version will be added to the line early next year and a station wagon is expected later.

MAGUIRE INSURANCE GROUP

Finally, a complete Auto Leasing Insurance Package that fits like a hand in a glove.

PERFECT FIT.

Maguire Insurance Group has an Auto Leasing Insurance Package that fits perfectly to your needs.

ONTRAC (Insurance Tracking) • performs all your insurance follow-up via our Data General MV 20,000 System.

Lessor Contingent Liability • designed to work in harmony with ONTRAC to give you vicarious liability insurance protection.

Substantial Discount • available when ONTRAC and Lessor Contingent Liability are packaged together.

GAPP Insurance • if the lease or finance vehicle is totalled because of theft, fire or collision, GAPP will pay the difference between net book value and actual cash value.

Residual Value • protect the future value of your cars and get your claims paid fast.

Garage Liability • General Liability
Garage Keepers • Building • Contents

Personal auto insurance for your lessee underwritten and direct billed by CIGNA Insurance Companies.

Please contact me for a perfect fitting.

PROFESSIONAL SALES AND DEALER PLATE CONTROL SYSTEM

ConTroLit takes an age old problem and creates a positive solution, with added benefits.

The Age Old Problem: Missing or mis-managed dealer plates.

The Solution: A device that keeps dealer plates under coded lock and key and shows which salesman uses which plate and when it is used.

The Added Benefits: Dealer management is able to track salesforce demo activity and demo cars on a daily foolproof basis. With a salesperson's security deposit on coded key, dealer eliminates monetary exposure. That key cannot be retrieved until the plate is returned.

Take control of your dealership NOW and eliminate dangerous liability with ConTroLit.

6 salesperson systems starting as low as $395.

ConTroLit Inc.™

New vehicle ban has Mexico City seeing more clearly

By Stephen Downer
STAFF CORRESPONDENT

MEXICO CITY — Despite reports of widespread corruption, Mexico City's most serious anti-air pollution drive to date is proving successful. Smog levels have dropped and traffic is much lighter.

The authorities have banned 500,000 vehicles from the streets every weekday.

On Mondays, vehicles with a yellow sticker must stay off the streets between 5 a.m. and 10 p.m. On Tuesday, pink-stickered vehicles are prohibited. Vehicles with red, green and blue stickers are affected on Wednesday, Thursday and Friday.

The major problem, as far as the authorities are concerned, has been the graft undermining the campaign.

Bureaucrats have demanded and gotten money from drivers wishing to exercise their right to change the color of their sticker. And drivers whose vehicles had no chance of passing the anti-pollution test have made under-the-counter payments to obtain the required documentation.

Traffic cops have also been accused of accepting bribes for not booking offenders. Fines are about $200.

Exempt from the program are public service vehicles.

But all vehicles are required to have another sticker, indicating that they have passed an exhaust emission test. And, if challenged by the police, drivers must produce documentary proof that the test has been taken and passed.

In addition, the state oil monopoly, Petroleos Mexicanos, has put on sale a new "oxygenated" gasoline. PEMEX claims the fuel improves engine combustion and reduces carbon monoxide emissions by 15 percent and hydrocarbon emissions by 12 percent.

"Air contamination levels have been much lower and have not reached the dangerous levels we used to have," said Regina Barba Pirez, a prominent environmentalist.

Environmental groups, which campaigned vigorously to get the government to adopt the measures, want them to be continued indefinitely.

They were introduced in mid-November, and the government plans to suspend them at the end of February.

That's usually the time of year when the cold winter air, which traps pollution in the city until the early afternoon, gives way to warmer air currents that allow the smog to rise and to be blown out of the valley of Mexico, 7,200 feet above sea level.

A year ago the government ordered all the capital's schools to close in January in a bid to protect children from the high pollution levels.

"We don't consider such a step necessary this year," an education ministry spokesman said.

Nevertheless, government ministers recognize that the metropolitan area, which has 20 million inhabitants, still has the world's most contaminated air. A cloud of pollution still hangs over the city, reducing visibility to a few hundred yards on bad days and causing eyes to sting even on the better days.

Experts say that private cars produce more than 50 percent of the contamination, which also reportedly can lead to throat and lung disorders. Heavily leaded gasoline, which PEMEX has undertaken to replace with unleaded fuel within two years, reportedly causes brain damage in small children.

A spokesman for Chrysler Mexico said: "We are not opposed to this (ban) at the moment. It's working. However, we shall pursue other ways of rationalizing the use of cars."

This summer, Chrysler Mexico President Erick A. Reickert said he opposed the idea of arbitrarily stopping cars from using the roads.

3 GM cars get 48-month loans

Several automakers fine-tuned, phased-out or extended their incentive programs last week.

Customers who purchase 1989 and 1990 Oldsmobile Cutlass Supremes or Buick Regals or 1990 Pontiac Grand Prix are offered a 4.8 percent finance rate on contracts up to 48 months.

The finance package is in lieu of the $750 cash rebate on 1990 Grand Prix LE, $1,000 rebate on the 1990 SE and $200 to $1,000 (depending on option package) on the 1990 Buick Regal. The 4.8 percent rate on these models is also avilable under General Motors Acceptance Corp.'s SmartLease program. The Oldsmobile and Buick program expires Jan. 3. Pontiac's program ends Jan. 4.

Nissan's $1,500 to $2,000 customer incentive on the 1989 Stanza expired Dec. 4. Nissan extended the $200 to $2,000 dealer incentive on 1989 Nissan Axxess and trucks until Jan. 5.

Toyota's dealer incentive program, which pays $500 on the 1989 Tercel, $500 on the 1989 Celica and $300 on the 1990 Tercel was extended until Jan. 3. It was to expire Dec. 4. Toyota is offering dealers $100 to $1,000 on all 1989 trucks and $100 to $800 on all 1990 trucks except the 1990 4Runner four-wheel drive. The cash amount depends on the number of vehicles sold. The program ends Jan. 3.

— Arlena Sawyers

Mazda plant expands to ready for '92 change

FLAT ROCK, Mich. — Mazda Motor Manufacturing Corp. will spend $9 million to add space to its stamping plant in preparation for its 1992 models.

The 53,000-square-foot addition is slated to be used for die storage, and as an office area for engineering and manufacturing workers.

U.S.-built Volkswagen models sold after June 30, 1988, are included in import totals.

SALES

FROM PAGE 2

For the month, the Big 3's share of combined U.S.-built and imported car sales sank to 62.39 percent. That was the lowest Big 3 car share for any month since the 60.69 percent in November 1986, when sales were affected by changes in the tax benefits of new-car purchases.

In November 1988, the Big 3 share was 66.70 percent.

The Japanese companies gained 4.7 points of combined car share at the Big 3's expense. Their share jumped to 30.58 percent in November.

Honda and Toyota were the big winners. Their U.S.-built and import car share rose by two and a half points, to a combined 18.7 percent of the U.S. car market. Each had over 9 percent, just behind Chrysler's 10.33.

The sales slide was consistent through the month. A fall of 12.44 percent for Nov. 21-30 followed declines in the first two 10-day periods.

For the entire month, U.S.-built cars sold at a weak 6.0 million seasonally adjusted annual rate, according to a Commerce Department formula.

In the recession years of 1981-1982, some monthly rates were around 5.5 million, said Michael Luckey, Michael Luckey Consulting Group, Cresskill, N.J.

The five transplant makers reported gains in the month. Toyota sold more than twice as many U.S.-built Corollas and Camrys this year.

Nissan, Mazda and Honda reported sales gains, and Mitsubishi sold 3,305 Eclipses in November. It was not making cars in the United States a year ago.

Meanwhile, importers sold 209,188 imported-cars in November, a decline of 12.37 percent from last year. A third of the import makers reported gains.

When light trucks are added to the sales picture, the decline from November last year is only 11.84 percent.

Sales of imported and domestic vehicles totaled 1,028,681.

In November, the four companies that build both trucks and cars in the U.S. sold 723,668 U.S.-built vehicles, a decline of 14.1 percent from last year. Nissan sold 21.40 percent more U.S.-produced vehicles than last year, but the Big 3 declined.

Chrysler retailed 9.69 percent fewer domestically-made cars and light trucks and Ford reported a 13.09 percent loss. GM's U.S.-built car and light truck sales fell 19.1 percent.

The four manufacturers sold 311,305 U.S.-built light trucks, down 8.31 percent for last year.

Automotive News Staff Reporter Arlena Sawyers contributed to this report.

PRODUCTION

Slow sales prompt more plant idlings

By Kathy Boyer
AUTOMOTIVE NEWS STAFF REPORTER

General Motors has extended the holiday vacation at eight U.S. assembly plants and one car line to keep production in line with sluggish sales.

The Reatta Craft Centre in Lansing, Mich., will be closed for the holidays starting Dec. 18. Linden, N.J.; Wilmington, Del.; Lordstown, Ohio; Janesville, Wis.; and Lansing, Mich., plants will be down from Dec. 22 until Jan. 8. Doraville, Ga.; Fairfax, Kan.; and the Grand Am line at Lansing, Mich., will close from Dec. 22 until Jan. 15.

Ford Motor Co. will close its Lorain, Ohio, truck plant today for one week due to slow sales. The company's car plants in Lorain, Ohio, and Dearborn, Mich., will resume operations today after being idle to adjust inventories.

Chrysler Motors' Jefferson Avenue plant in Detroit remains idle until Dec. 18 due to poor sales.

Output of 540,638 cars in November was the lowest for that month since the 418,948 built in November 1981.

Last month's total was 18.38 percent below the October total of 662,406 and 16.40 percent below the year-ago month's 646,682.

Automakers targeted 131,195 cars to be built last week, 1.38 percent more than the prior week but 21.66 percent below the year-ago week.

Last week's estimated production was split as follows: General Motors, 48.72 percent; Ford Motor Co., 16.51 percent; Chrysler Motors, 13.95 percent; Honda of America Manufacturing, 5.87 percent; Mazda Motor Manufacturing (U.S.A.) Corp., 3.42 percent; Diamond-Star Motors, 3.22 percent; Toyota Motor Manufacturing U.S.A., 3.19 percent; New United Motor Manufacturing Inc., 2.90 percent; Nissan Motor Manufacturing Corp. U.S.A., 1.81 percent; and Subaru-Isuzu Automotive, 0.41 percent.

Truck assembly of 325,362 units in November rose 3.11 percent over October's 315,534 but slipped 9.30 percent from the year-ago month's 358,715.

Nov. numbers mixed in Canada

Canadian auto output in November was 105,940, 13.60 percent more than the October total of 93,259 and 35.12 percent more than the year-ago month's 78,403.

Truck production last month of 79,408 dipped 0.71 percent from October's 79,979 and fell 12.96 percent from the year-ago month's 91,236.

General Motors will idle both of its Oshawa, Ontario, car plants for one week and its Ste. Therese, Quebec, and Scarborough, Ontario, plants for two weeks beginning Jan. 2. due to slow sales.

GM will indefinitely lay off the second shift at its St. Catherines, Ontario, engine plant on Jan. 15, affecting about 350 workers.

Buick City: From bottom to No. 1

Japan's ideas help GM to do it right

By Michelle Krebs
AUTOMOTIVE NEWS STAFF REPORTER

FLINT, Mich. — It was just after the start of the 1987 model year when General Motors and Buick brass gathered to ponder the Buick LeSabre, produced at the revamped Buick City complex.

GM engineers, Buick marketing executives and plant officials knew they had trouble in Buick City, and the debate grew heated.

In this renovated showcase plant, the LeSabre came off the line with a bad paint job. Fit and finish were poor. Worse, the windows wouldn't stay up. Dealers had received a pile of complaints about windows falling off the track time and again.

So bad were things that GM and Buick officials decided at the meeting that they couldn't ship the cars.

AUTOMOTIVE NEWS/JOE WILSSENS

Quality at the plant has gone from unspeakable to laudable.

That unhappy gathering marked the turning point for Buick City. Within three years, the LeSabre became the top-ranked domestic car, and Buick City was ranked among the world's two best plants for quality.

Those windows "became a real rallying point," says George Guernsey, Buick's product satisfaction manager, who was at that meeting. "It was a perfect problem to demonstrate how ridiculous this

Saab and GM both benefit from 50-50 deal

By Michelle Krebs and Richard Johnson
AUTOMOTIVE NEWS STAFF REPORTERS

DETROIT — General Motors shocked the automotive world with the announcement Friday of its joint venture that takes over the car operations of Saab-Scania AB.

The deal offers immediate benefits for both GM, which needs more manufacturing capacity in Europe, and Saab's car operation, which needs more money.

Just six weeks after losing out to Ford Motor Co.'s $2.5 billion bid for Jaguar plc, GM picked up engine technology and use of one of the world's best new assembly plants for just $600 million.

GM President Robert Stempel told Automotive News that production of GM's European cars could be moved into Saab plants as early as next year.

GM gains access to Saab's state-of-the-art four-cylinder engine for its European-built cars. The deal also gives GM entree to the upper car segment that it also requires in Europe.

GM says the 50-50 joint venture with Saab-Scania will have no effect on Saab's U.S. operations.

Saab-Scania benefits from a much-needed cash infusion. GM will pay Saab-Scania $600 million for 50 percent of the joint-venture company. A Saab statement issued Friday said Saab-Scania and GM will each add $100 million in capital to the new joint-venture company, Saab Automobile AB.

> "It's a good deal for Saab and a fair deal for GM."
>
> **Ronald Glantz**
> Montgomery Securities

The venture also provides Saab with access to GM's vast resources, technology, components and suppliers.

Ronald Glantz, auto analyst for Montgomery Securities in San Francisco, said, "It's a good deal for Saab and a fair deal for GM. . . . Saab can return to profitability as a result of the deal. And GM will pay a small price for Saab's good name and distribution system.

"It's likely that some GM components will replace Saab's purchase of components outside. I also

Cars blamed for bringing U.S. to edge of recession

By Diana T. Kurylko
AUTOMOTIVE NEWS STAFF REPORTER

WASHINGTON — Retail incentive excesses and easy credit by the auto industry have borrowed sales from the future and could lead to a recession in the United States in 1990, Federal Reserve Board governor Martha Seger says.

Seger predicts that the U.S. economy has a 75 percent chance of entering a recession.

Domestic auto industry sales for cars and trucks are likely to drop 10 percent from 1989 levels, Seger said, painting a dismal picture for the first year of the new decade.

Car and truck sales in 1989 are likely to hit 14.8 million units. A 10 percent drop would put 1990 sales near 13.3 million units, the lowest total since 12.3 million in 1983.

Economists of the Big 3 predict 1990 will start in difficulty but grow in the second half. They say a recession is unlikely unless the Fed refuses to loosen interest rates. In fact, some Big 3 economists believe sales could hit 15.0 million next year. Ford's economist said the downside is just 14.5 million. (See accompanying story, Page 46.)

"I think we're very vulnerable and very much at risk. I have a growth forecast for next year that

RANDY SANTOS

Martha Seger says there is a 75 percent chance of recession in 1990.

is just barely anything, just enough so you can write it in black ink," Seger said.

"Write off a few bucks and you'd be in red ink, showing a decline."

Seger, a former Michigan banking commissioner, said that only several weeks ago she predicted a 50 percent chance of recession. But the slump in real estate and "terrible" auto sales numbers in October and November convinced her "the odds have passed the 50/50 mark."

"I keep looking for things that are strong, sectors that are strong, and it's difficult to find them. I keep reading the numbers for consumer purchases and they're not too strong either," she said.

Seger said the economy will be the most vulnerable in the first six months of the year, and the gross national product may even decline because of the tightening measures

Chrysler offers first rebate on minivans

By Mary Connelly
AUTOMOTIVE NEWS STAFF REPORTER

HIGHLAND PARK, Mich. — Chrysler Motors last week offered a $1,000 consumer incentive on its previously rebate-free minivans and inaugurated a "guaranteed rebate" program for several model lines.

The innovative rebate guarantee assures consumers that Chrysler will pay the difference to buyers if rebates increase on selected 1990 models through Sept. 30, 1990. The program covers eligible vehicles delivered through Jan. 31.

The moves are a bid to boost showroom traffic and protect minivan production schedules in the first quarter of 1990.

The industry will keep a watchful eye on the Chrysler program. General Motors last week said it closely monitors competitive programs.

"If we have to make adjustments to be competitive, we will," said Terrance Sullivan, GM manager for sales and financial reporting.

This is the first time Chrysler has offered rebates on its minivans since the vehicles, which still account for more than half of all minivan sales, were introduced in the 1984 model year.

The minivan rebate will expire Jan. 31, and the company said it does not expect to repeat the incentive this model year.

The LS400, above, is selling three times better than the ES250.

Lexus lowers sales target

By Mary Ann Maskery
AUTOMOTIVE NEWS STAFF REPORTER

TOKYO — Toyota Motor Corp. will reduce its sales target for Lexus in the United States next year by 20 percent. The company now hopes to sell 60,000 units instead of 75,000.

A Toyota spokesman cited the "incredibly competitive" U.S. market as one reason for the lowered expectation.

In addition, the company expected to sell more of the ES250. But instead of the anticipated 50-50 split, the flagship LS400 has taken 75 percent of more than 8,500 sales so far.

Both models went on sale in the United States in September. Advertising for the ES250 has recently been increased.

Nissan Motor Co. refuses to disclose sales targets for its luxury Infiniti line, but production has been listed at 2,500 a month.

Toyota said the lower sales target for Lexus was a marketing decision. It had no connection with the recent recall of 8,000 LS400 units for cruise control and brake light repairs.

Car supply jumps to high 83 days

By Philly Murtha
AUTOMOTIVE NEWS STAFF REPORTER

Extended Big 3 plant closings and a full program of incentives failed to shrink bulging domestic and import car stocks at the beginning of December.

U.S. and import carmakers and dealers began the month with an inflated 83-day supply of new cars, up from 74 days on Nov. 1.

The domestic-car supply was the highest ever for Dec. 1, and the import supply was the highest for that date since Automotive News began tracking import inventories in 1982.

The eight domestic carmakers and their dealers began the month with an 88-day supply, up from 77 on Nov. 1.

Importers started the month with a swollen 74-day supply, up from last month's 68 days.

Inventory numbers were well above the Dec. 1 average of 73 days for the last five years.

Sales were slow throughout October and November after heavily discounted model-year cleanup sales in August and September. The daily sales rate is a prime factor in the days-supply calculation.

"It could be worrisome if the market continues to run at a 6-million rate," said Jack Kirnan, auto analyst at Kidder Peabody in New York.

But Kirnan said he thinks that gradually improving sales rates and cautious production schedules for the Big 3 will bring days-supply numbers into line during the first quarter.

November's U.S.-built and imported car sales dropped 13.65 percent from November 1988, increasing the days' supply, which is based on production, inventories and the current sales rate.

General Motors started the month with 872,693 unsold cars, 60,050 more than on Nov. 1. Its days' supply climbed from 88 to 100 days. Cadillac was the only GM division to reduce stocks in November; it had a 71-day supply.

On Dec. 1, combined stocks of import and U.S.-built cars totaled 2,280,061. That was up 146,675 units, or 6.88 percent, from Nov. 1, when there was a 74-day supply.

Last year, dealers and manufacturers started December with about 41,000 fewer cars in stock, equal to a 71-day supply.

Dealers surveyed by Automotive News said they were hunkering down for a rough first quarter by restricting orders and keeping inventories under 60 days.

"We're only ordering to replace some key types of vehicles," said Tony Cueva, general manager of Fairfax (Va.) Chrysler-Plymouth. "Watching the mix should help us keep expenses down. . . . We'd like to keep our inventory under 60 days."

Reducing inventories to 60 days is a goal for Peter Griffin, owner of Buick, Ford and Lexus stores in Greenwich, Conn. "We're being

1991 Escort

Ford Motor Co. took the wraps off its redesigned 1991 Escort last week at the automaker's annual Christmas party in Detroit. The car was co-engineered with Mazda and is based on the Japanese automaker's 323 model. Two-door and wagon Escorts are planned when the car goes on sale this spring.

Domestic sales plunge 32% in early December

By Philly Murtha
AUTOMOTIVE NEWS STAFF REPORTER

Early-December sales of U.S.-built cars and light trucks sank 32.19 percent below last year's weak Dec. 1-10 total.

Car sales for the Dec. 1-10 period were the lowest in 30 years.

And it was the seventh consecutive 10-day period of sales losses since the start of the fourth quarter and the 1990 model year.

The hope for an early December recovery never materialized for seven of the eight U.S. automakers. Toyota was the only one to report a car sales increase. The others had declines of 17 to 54 percent.

In early December, the eight makers delivered 180,708 cars and light trucks compared to 266,492 last year. This year's period had one less selling day than last year's, so the daily rate was down 23.71 percent.

Nissan, which reported major sales gains in the first six periods of the quarter, took the biggest hit in early December. Deliveries of its U.S.-built Sentras and light trucks were off 55.58 percent from last year.

The Big 3 shared similar losses. GM's combined car and light-truck sales fell 32.36 percent; Chrysler Motors' combined sales plummeted 33.41 percent; and Ford Motor Co. sold 32.84 percent fewer vehicles in early December.

The U.S. carmakers sold 107,259 cars in early December, a plunge of 35.93 percent. It was the lowest total for a 10-day period since early January's 106,980.

Each of the Big 3 sold fewer cars this year. Chrysler Motors suffered the biggest decline; its car sales nosedived 40.55 percent.

Ford retailed 37.93 percent fewer cars, and GM's car sales slumped 36.36 percent below the year-ago period. Lincoln was the only Big 3 make to report an increase during the period.

Except for Toyota, transplant car sales took a significant turn for the worse in the first 10 days of December. Nissan's sales of U.S.-built Sentras plummeted 53.61 percent. Even Honda delivered 40.29 percent fewer cars in the period. Mazda sold 17.67 percent fewer MX-6s this year than it did in 1988.

On the other hand, Toyota tripled its sales of U.S.-built Corollas and Camrys. At this time last year, Toyota was still in the startup phase of Camry output at its plant in Georgetown, Ky.

Newcomer Mitsubishi delivered 648 Eclipses in the first 10 days of December.

In early December, the four U.S. light-truck makers sold 25.85 percent fewer vehicles than they did a year ago. Ford's light-truck sales were off 16.10 percent; GM's fell 24.35 percent; Chrysler's dropped 25.67 percent; and Nissan's dropped 57.08 percent.

Correction

A Dec. 11 item should have said the Mazda MPV ranked ahead of all other minivans and multi-purpose vehicles after its first year on the market in the most recent J.D. Power and Associates Compact Truck Initial Quality Survey, rather than being ranked against compact sport utilities.

Chevy repairs Storm seat after finger injuries

By Timothy J. Dunne and Dutch Mandel
AUTOMOTIVE NEWS STAFF REPORTERS

Chevrolet quietly recalled its newly introduced Geo Storm model last month after a faulty seat-back adjuster smashed or cut the fingers of two dealership workers and one owner.

Worker injuries occurred as vehicles were being prepared for delivery.

The Storm, a rebadged 1990 Isuzu Impulse, holds much of Geo's hope for becoming a significant seller. Chevy officials hurried to correct the problem of Geo's flagship sports coupe.

"There was a problem with the right seat-back adjuster," said Ralph Kramer, Chevrolet director of public relations. "When you fold the seat down, a couple of metal pieces come together and you can pinch your finger when the seat is put back upright."

Two General Motors engineers claimed the dealership workers suffered severed fingers, but Chevrolet General Manager Jim Perkins said fingers were "smashed," not severed.

Between 600 and 800 vehicles were on the street in November before being recalled, mostly in California where the car was first offered.

Owners were contacted by phone, then sent a letter and warning label to attach to the seatback. Once at the dealership, the cars were outfitted with a protective plastic sleeve to cover the exposed metal parts of the seat-back adjuster.

Chevrolet froze sales of the Storm for 10 days at the beginning of November until the cars received their protective shield. Chevrolet sent the plastic guards to dealers on Nov. 2.

"It was kind of an unprecedented thing for us," said Kramer. "We got on the phone and let people know right away — sort of nipped it in the bud."

The Storm recall came at a precarious time for General Motors. Fourth-quarter market share has dropped to less than 32 percent. The company reported a 28 percent sales decline in early December

Japan's suppliers, booming output blamed for rush of vehicle recalls

By Mary Ann Maskery
AUTOMOTIVE NEWS STAFF REPORTER

TOKYO — A spate of recent recalls has aroused government concern about shoddy production, but the blame seems to lie with component suppliers.

The Japan Automobile Manufacturers Association said the Ministry of Transport's warning to automakers after the Toyota Lexus recall and other recalls was a reminder to inspect components carefully before assembly.

An association spokesman said there have been few problem cases, but he said the ministry may be concerned about lax production at a time strong market demand.

High demand has meant higher sales and higher profits for most suppliers. But some are simply "too busy," according to an analyst who is researching the supplier networks. They have been faced with an onslaught of totally new models which, in many cases, involve high costs for development.

The suppliers also are facing a labor shortage, which has led to heavy overtime to meet production deadlines. Stanley Electric, a major supplier of lighting units for Honda, reported its first operating loss, 1.04 billion yen ($7.4 million) for the first half of the fiscal ye ended Sept. 30.

Much of the problem was attr buted to heavy productio pressure, particularly for the ne Accord, which was introduced s multaneously with four versions Japan and the United States September. Stanley reportedly d veloped 18 parts for the Accor and costs exceeded estimates.

"The rush to production can't ignored" as a possible cause for r cent recalls, according to analy Steve Usher of Kleinwort Benso But he said the Lexus recall, well as Daihatsu's problems wi the new Applause and the larg Charade, reflect mistakes as co panies move into new and larg segments of the market.

Haruo Shimada, professor of e onomics at Keio University, did n comment on the reason for the r calls as such. But he said the hig pace of production to meet i creasing demand during the pa year has put a lot of pressure manufacturers and particularly suppliers.

They are facing increased d mands as well as heavy overtim he said. As a result, many supplie are spread thin. "People are tired Shimada added.

10,587 Mazda MPVs have been recalled.

Mazda to fix '89 MPV seat belts

One week after Toyota announced its Lexus LS400 recall, Mazda Motor of America has issued a recall order for one of its popular models.

Mazda said it will recall 10,587 1989 model MPV vans to replace some seat belt brackets. The order covers only the rear-most seat in seven-passenger models.

According to a Maz spokeswoman, NHTSA told the company the brackets had been damaged in a during testing. NHTSA concluded that the brackets could crack and possibly fail in an accident.

The test results prompted t voluntary recall. No injuries deaths have resulted, the spoke woman said.

In August, NHTSA opened preliminary investigation into po sible seat belt-related defects in 1984 to 1989 Mazda models. T agency had received 11 complain of seatbelt malfunctions in 10 acc dents that allegedly caused 15 i juries. That investigation is conti uing.

Japan hopes billions solve trade imbalance

By Mary Ann Maskery
AUTOMOTIVE NEWS STAFF REPORTER

TOKYO — Japanese automakers are rushing ahead with import plans to help solve the industry's overseas trade imbalance.

It would mean more than doubling Japan's imported-car market by 1992 if all plans are put into effect. Many will come from Japanese transplants in the United States.

The process started in July, when the Ministry of International Trade and Industry held meetings with individual companies to discuss ways of easing trade frictions.

The companies were not asked to increase imports, according to Takao Suzuki, the head of MITI's auto division. But "if they wanted to increase imports, they were encouraged" to do so, he said.

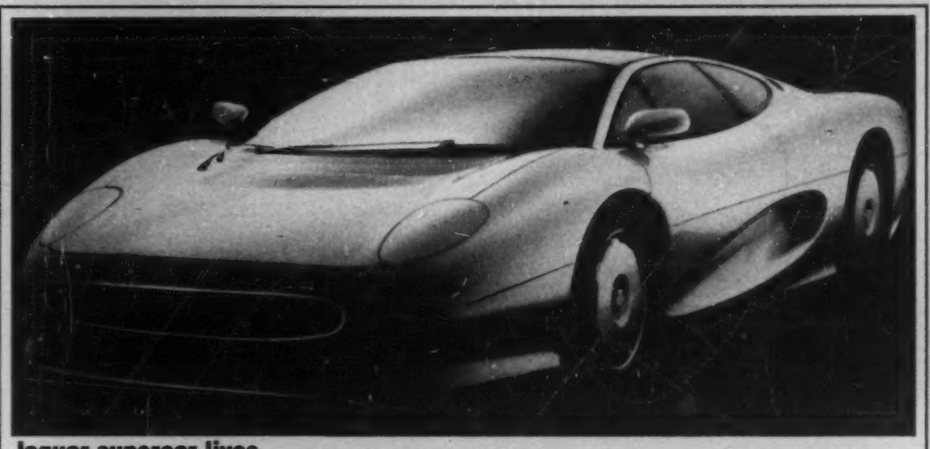
Five companies — Toyota Motor Corp., Nissan Motor Co., Honda Motor Co., Mazda Motor Corp. and Isuzu Motors — have so far announced how much they want to expand imports. The others "are thinking about it," Suzuki said.

The hurry-up on imports is part of an overall MITI effort to double imports by the end of 1992 with the help of the country's largest exporters.

The campaign has aroused some grumbling in other industries such as electronics, which is not as well placed as automakers with overseas facilities.

But with eight of the nine auto companies already set up in North America, automakers can simply dip into U.S. production to come up with what have been called "re-

see IMPORTS, page 47



Jaguar supercar lives

The 200 mph Jaguar XJ220 supercar will go into limited production in early 1992. The car, which will carry a $464,000 price tag, will not be exported to the United States, said JaguarSport Managing Director Tom Walkinshaw. JaguarSport will manufacture the car at a new factory near Banbury, England, with a production limit of 350 cars, 220 minimum. The car has changed considerably from the four-wheel drive V-12 concept shown in 1988. It is 770 pounds lighter and 10 inches shorter. It will have rear-drive and a 500-HP twin turbo V-6. Jaguar Chairman Sir John Egan denied the car's resurrection had anything to do with the recent Ford purchase of Jaguar, though only two months ago he indicated the project was all but dead.

An MN12-derived Mustang is being called "just a toy".

Next Mustang may use awd Tempo base

By Laura Clark
AUTOMOTIVE NEWS STAFF REPORTER

RANCHO MIRAGE, Calif. — The next-generation Ford Mustang may be built on an all-wheel-drive derivative of the 1993 Tempo/Topaz platform or an improved version of the present rear-wheel-drive Mustang platform.

But the future of the much-loved Mustang nameplate — which has caused a controversy in Ford's product planning department in recent years — is still unclear. Product planners and executives say Mustang's destiny may come into clearer focus when Congress decides fuel economy and emissions standards.

Kenneth R. Dabrowski, program manager for small-car and specialty-vehicle programs, said Ford is considering basing the next Mustang on the same platform as its next Tempo/Topaz. The 1993 Tempo/Topaz will use the CDW27 platform, the so called "World Car" platform, that will be shared with Ford of Europe's Sierra successor.

"The trouble is, the CDW27 is a front-wheel-drive platform," said Dabrowski during the media preview of the Ford Escort and Mercury Tracer.

"You'd have to put all-wheel-drive on it to take the large engine. That's certainly one of the alternatives."

Ford is also looking at keeping the current rear-wheel-drive platform and improving it, according to Dabrowski.

"It's old but it's good," he said. "You don't necessarily have to change something that's pretty good. You just keep on refining it until it's better."

The MN12 platform, which holds the Thunderbird and Cougar, is too large for the next Mustang, according to Dabrowski. An MN12-derived Mustang has been spotted around Ford World Headquarters in Dearborn, Mich. Max L. Jurosek, vice president of car product development, said it has been testing well, but he described the vehicle as "just a toy" that Ford is studying.

Tough corporate average fuel economy laws could prevent Ford from offering the popular V-8 engine in the Mustang. About half of all Mustangs are sold with Ford's 5-liter V-8 engine. It is standard in the Mustang GT.

"Without the GT, you wouldn't have a Mustang," said Dabrowski.

Whether Ford will have a Mustang in the 1990s is a question Da-

Ford plans to cut $1 billion from production costs

By Laura Clark
AUTOMOTIVE NEWS STAFF REPORTER

RANCHO MIRAGE, Calif. — Ford Motor Co. plans to cut $1 billion dollars from the design and manufacturing costs of its passenger cars over the next three to four years. The effort is aimed at ending a series of product cost overruns that have reduced the company's profit on individual car lines.

Max L. Jurosek, Ford vice president of car product development, said the cost reduction effort will be achieved by reducing the costs of individual parts on existing car lines and keeping tighter cost controls on the development of new-car programs.

"We had to spend a lot of money to redevelop our products; when you do that quickly, people do things without giving proper weighting to the most efficient way to do it," said Jurosek.

"Our chore is to find the most efficient way and still have those product improvements."

Another chore will be completing the cost reduction program without sacrificing quality or competitiveness. No major product programs will be slashed as part of the cost reduction drive, according to Ford officials.

Ford began the cost reduction program in mid-1988 and has achieved 50 percent of the $1 billion goal. Jurosek said the program started shortly before Ford management found that the 1989 Thunderbird/Cougar (MN12) program was over budget by $500 per car. The cost reduction measures are already being applied to the new Escort/Tracer, which are presently over their cost-per-car targets but below investment targets. Both GM and Chrysler have been working on their own cost cutting plans in recent years. Chrysler announced in July that it wanted to trim $1 billion out of its overall costs by the end of 1990. GM announced a cost reduction plan in February 1987 to cut $10 billion out of its overall costs by 1990. It raised its target to $13 billion in 1988.

Much of the cost reduction effort at Ford has focused on its relationship with suppliers. Jurosek said Ford is having six- to eight-hour "sit down" sessions with its suppliers to find ways to redesign, re-

14 automotive experts join faculty for World Congress

DETROIT — Fourteen automotive experts in fields ranging from manufacturing to consumer trends to dealer service will address the Jan. 8-9 afternoon sessions of the Automotive News World Congress.

The 14th Automotive News World Congress, staged in conjunction with the North American International Auto Show, will be held Sunday through Wednesday, Jan. 7-10, at the Westin Hotel here and is expected to draw industry leaders from around the world.

Scheduled to speak Jan. 8 are:

● **Nelson B. Gonzalez,** manager of the Buick-Oldsmobile-Cadillac Group's Buick City assembly plant in Flint, Mich., since January 1989.

The Buick City plant makes the LeSabre, which was hailed last summer in J.D. Power and Associates' Initial Quality survey as the best-built car in North America and second best among all cars sold in the United States.

Gonzalez joined General Motors in 1957 at GM do Brasil and moved to Buick's headquarters in Flint in 1961.

From 1976 to 1985 he managed the axle, spring, forge and transmission plants in Flint, and in 1985 he became manager of the Buick manufacturing facility in Willow Springs, Ill.

● **Susan Shackson,** director of public policy development and government relations at Ford Motor Co. since 1987.

Shackson's job is anticipating and identifying government public policies that will affect Ford operations and decision making. Advising top brass at Ford, she develops strategies and objectives to meet the demands of those issues.

Before joining Ford in 1973, Shackson was special assistant to the assistant secretary of domestic and international business for the Department of Commerce. She coordinated and participated in international trade negotiations and missions.

● **Laurel Cutler,** vice president of consumer affairs for Chrysler Motors since 1988.

Cutler reports to Chrysler Motors Chairman Bennett Bidwell on consumer trends and perceptions of the company. She analyzes customer satisfaction data and outlines the framework for strengthening the corporate image.

● **Takeshi Tanuma,** president and chief executive officer of Nissan Research and Development since 1988.

Tanuma joined Nissan in 1958. Prior to his present post, he was general manager of the corporate planning office of Nissan Motor Co. in Tokyo. He planned technology development strategies for domestic and overseas markets.

In the late 1960s, Tanuma was part of a Nissan team that developed technology to meet U.S. and Japanese emissions standards. He received the Japan Society of Mechanical Engineers Medal in 1979 for his "NAPS-Z" emissions control system.

● **John H. Hammond,** managing partner of J.D. Power and Associates automotive consulting firm in Agoura Hills, Calif.

Hammond provides market analysis and industry forecasting for the car and light-duty truck markets. He advises corporate strategists and financial and production planners and has appeared before congressional committees to assess the U.S. automobile industry and federal proposals that might affect it.

Hammond is a former vice president of Data Resources Inc., has served as a staff member of the Bureau of Economic Analysis with focus on the auto industry and was a financial investment analyst with the Securities Industry As-

MUSTANG

FROM PAGE 3

browski is often asked. He recently addressed graduating seniors in the master's in business administration program at Villanova University. When Dabrowski fielded comments from the class after the talk, several of the students said, "Don't change our Mustang!"

Dabrowski said Ford has no intentions at this point of handing the development of its next-generation Mustang to an overseas manufacturer, like all its other small-car programs.

"We are very fond of the Mustang, and we have at this point in time no intention of establishing an association on the Mustang program as we know it," he added.

Ford tried to pass the Mustang program to Mazda earlier in the decade, but enthusiasts wrote Ford executives and pleaded with them to keep the Mustang an American car. The Mazda-based car eventually became the Probe.

Despite its almost cult-like following, Mustang sales have suffered along with sales of other small cars. Ford has had to close the Dearborn assembly plant, where Mustangs are built, several times this year because of a lack of orders. Ford sold 155,943 Mustangs from Jan. 1 to Dec. 10, 1989, compared to 160,679 in the year-ago period. The peak year for Mustang sales was 1966, with 549,436.

Dabrowski, who also is in charge of coordinating the development of the U.S. version of the CDW27, said that program is not over budget. Press reports last month indicated that the program was $1 billion over budget.

He confirmed that Ford wants to put the next-generation Tempo/Topaz in its St. Louis assembly plant first and in Ford's Kansas City, Mo., assembly plant later. The Aerostar, presently built in St. Louis, would be built in Ford's Oakville, Ontario, plant under that scenario. Oakville presently builds the Tempo/Topaz.

REBATES

FROM PAGE 1

The programs are a response "to an urgent request from our dealers to bring showroom traffic in," said Chrysler Motors Chairman Bennett Bidwell.

"Our dealers need traffic, and rebates on minivans will bring traffic," he said. "We're not looking to turn the market upside down by this program."

Bidwell said showroom traffic throughout the industry was down 30 to 40 percent from 1988 in the first 10 days of December.

He said Chrysler discussed with its dealers "a flat price rollback." Volkswagen of America reduced prices an average of 8.2 percent for 1990 models.

"We have been watching VW very carefully," Bidwell said. "But their dealers say it didn't work. People still want rebates."

Chrysler also looked at a program launched last month by Oldsmobile, which abolished customer rebates and directed almost all incentive cash to dealers.

But Bidwell said Oldsmobile dealers said floor traffic did not increase.

Bidwell said the $1,000 rebates on minivans allow the company to retain overtime during the first quarter of 1990 at the two plants that build the vehicle: Windsor, Ontario, and St. Louis No. 2.

The rebate covers all passenger versions of the Dodge, Plymouth and Chrysler minivans.

The days' supply for those vehicles ranges from 81 days for the Dodge Caravan/Grand Caravan to 129 days for the new Chrysler Town & Country. Chrysler expects to reduce minivan stocks by Jan. 31. The company will then build up minivan stocks to 25,000-30,000 units in anticipation of four-week model changeovers for the reskinned 1991 models next summer.

Bidwell said the company will take the unprecedented step of launching the restyled vans with both plants on two shifts.

The guaranteed rebate applies only to selected 1990 models (see accompanying table). Special low-interest financing is available as an alternative to the guaranteed rebates. If the cash incentive increases, people who select the financing will be paid the difference.

'90 Chrysler models with guaranteed rebate

- **$1,000:** Chrysler LeBaron coupe and convertible, New Yorker Fifth Avenue, Imperial and Town & Country; Dodge Daytona, Daytona ES, Caravan, Grand Caravan and Dakota Club Cab; Plymouth Laser, Voyager and Grand Voyager, and Eagle Talon and Premier LX, and Jeep Cherokee and Wagoneer Limited.
- **$1,500:** Dodge Daytona ES Turbo, Daytona Shelby, Dakota (except 'S' and Club Cab) and Ram 2wd and 4wd Club Cab pickup trucks, and Eagle Premier ES.
- **$2,000:** Dodge Ram 2wd and 4wd pickup trucks (except Club Cab and diesels) and Eagle Premier Ltd.

FINGERS

FROM PAGE 2

compared with the same period last year, and announced that it will idle most of its assembly plants from Dec. 23 through mid-January to reduce inventory.

The Geo channel, in place more than a year, is Chevrolet's attempt at attracting import-intending buyers to its all-American showrooms. But recognition of the brand has been low, and Chevrolet dealers who sell Geo cars have not reached corporate sales goals.

Of Chevy's roughly 5,000 dealers, about 4,000 sell the Geo lineup, consisting of Japanese-built, Geo-badged vehicles.

In the Geo family are the entry-level Metro, sport-utility Tracker, the GM-Toyota joint venture Prizm made in the New United Motor Manufacturing plant in Fremont, Calif., and the sporty Storm made in Japan.

The Storm, which retails for $10,390, is supplied to GM by Isuzu.

"There was an increased sensitivity to (the recall) because they didn't want to screw up the launch," said a General Motors insider. "GM legal must have been turning over in their grave. But I'm proud of the way Chevrolet stepped up to the problem and got it resolved."

Chevrolet offered dealers interest credit on the 10-day flooring costs of the locked-up cars. Giving interest credit on "stop sale" vehi-

INVENTORIES

FROM PAGE 2

very selective on what we're ordering," he said. "Buick is 60 days — about the best we've had it in two years."

He added, "Lexus has been incredible for us. It's saving our neck."

Domestic-car stocks totaled 1,658,503 on Dec.1. The U.S. automakers — Big 3 and transplant — had about 109,000 more unsold cars than they had on Nov. 1.

Import-car stocks grew 6.50 percent to 621,558 on Dec. 1, for the 74-day supply.

Last year's Dec. 1 import inventories were higher than this year's in number of units, but 1988's faster selling pace made that a 66-day supply.

Days' supplies exceeded four months for some imports: Audi, Alfa Romeo, Suzuki and the captive imports of Chrysler Motors and Ford Motor Co.

Combined domestic and import car stocks for Ford Motor Co. climbed 7.81 percent to 509,800 or 92 days, up from 75 days in November.

The only Ford car line to reduce stocks in November was Lincoln, which had a lean 45-day supply on Dec. 1.

Chrysler Motors had 260,479 unsold domestic and import cars in stock for a 92-day supply, up from 79 days on Nov. 1. Models with more than four months' worth of cars were Laser, LeBaron, New Yorker and Daytona.

Honda and Nissan were the only Japanese companies with transplant operations to shave their combined U.S.-built and import car stocks during November. Honda began the month with 66,159 unsold cars, equal to a 30-day supply. Last month, it had 31 days' worth.

Nissan reduced combined car stocks by 4.89 percent to 142,109, equal to an 88-day supply, down from 99 days last month.

Toyota's car stocks were 10.43 percent higher on Dec. 1, for a 48-day supply, up from last month's 45 days.

Combined car stocks for Mazda rose 15.86 percent in November to 57,301, equal to a 71-day supply, up from 68 days on Nov. 1.

The total import car and truck stockpile on Dec. 1 grew to 765,626, a 73-day supply, up from last month's 68-day supply.

Import truck stocks rose to 144,068 for a 68-day supply. But better sales reduced the days' supply by one day from Nov. 1.

IMPORTS

FROM PAGE 3

verse imports."

Toyota announced a 300 billion yen ($2.1 billion) import plan that covers a variety of components and is supposed to increase the company's annual import rate 250 percent.

Included is a proposal to import right-hand drive vehicles from Kentucky from 1992, with an eventual target of 40,000 units a year.

Honda presented plans to increase imports 250 percent over its 1988 figures by 1992. Besides parts, motorcycles and helicopters, Honda will increase the import of Ohio-made vehicles to 50,000 units a year from the current rate of approximately 5,000.

Mazda proposes an even more ambitious plan that calls for raising imports, largely Ford-badged units from Flat Rock, Mich., to 60,000 in 1992.

Mazda's total package, which includes a variety of automotive parts and materials, comes to 200 billion yen ($1.4 billion), an increase of four times the company's 1988 level.

Isuzu is the latest to announce its plan for 1992.

It will multiply 1988 figures nearly four times for a total of 75 billion yen ($534 million).

The plan covers air bag systems and other components as well as Volvo, Opel, GM and the Subaru-Isuzu plant in Lafayette, Ind.

Nissan will use overseas facilities to double the level of imports.

But Nissan's primary emphasis in what it calls its "international cooperation program" is on reducing exports rather than increasing imports.

No set figure on imported vehicles has been announced.

Simply adding up the known reverse import plans for the four companies comes to a total of 170,000 a year.

That would match the total 1989 figures for all imported-car sales in Japan — an indication the import market in Japan will at least double in the next three years.

Judging from the domestic sales plans of most companies, they are expecting aggressive growth through 1992, possibly topping the six million mark for passenger cars.

Hyundai wage freeze for executives, managers

SEOUL, South Korea — Hyundai Group executives are being urged to accept a wage freeze next year as an example to workers.

Chung Ju-young, honorary chairman and founder of Hyundai, suggested that salaries for every-

Truck output dips; 2 Ford plants down

By Kathy Boyer
AUTOMOTIVE NEWS STAFF REPORTER

Last week's targeted domestic auto production leaped above the prior week's build, but truck output slipped as Ford Motor Co., idled two plants, cutting the schedule by about 8,300 units.

With only one car plant closed last week because of bloated inventory, automakers scheduled 146,660 units, 13.14 percent above the previous week but 12.97 percent below the year-ago week.

So far this year, 6,689,585 cars have been assembled, 3.57 percent below last year's build at this point.

Last week's estimated production was split as follows: General Motors, 46.16 percent; Ford Motor Co., 22.25 percent; Chrysler Motors, 13.26 percent; Honda of America Manufacturing, 5.22 percent; Mazda Motor Manufacturing (U.S.A.) Corp., 3.06 percent; Toyota Motor Manufacturing U.S.A., 2.85 percent; New United Motor Manufacturing Inc., 2.66 percent; Diamond-Star Motors, 2.55 percent; Nissan Motor Manufacturing Corp. U.S.A., 1.62 percent; and Subaru-Isuzu Automotive, 0.37 percent.

Truck output was estimated at 81,971 units last week, 9.98 percent below the prior week and 12.29 percent below the year-ago week.

Year-to-date, 4,011,548 trucks have been assembled, 0.82 percent below last year's build at this time.

GM idled its Reatta plant in Lansing, Mich., today because of high inventory. The plant will be closed until after the holidays.

Ford halted production at its Lorain, Ohio, truck plant last week because of softening sales. Also, its Twin Cities truck plant in St. Paul, Minn., was shut down because of a component shortage. Both plants were expected to resume operations today.

Chrysler's Jefferson Avenue plant in Detroit was closed last week because of slow sales. The plant is scheduled to resume production today.

Ford's Wixom, Mich.; and Kansas City, Mo.; car plants and its and Norfolk, Va., truck plant were slated for overtime last Saturday.

All assembly plants will close Friday for the holidays.

Canadian cars at 3-year high

Canadian automakers last week scheduled the highest weekly output in more than three years.

Targeted production of 27,353 was the highest weekly projection since the 27,559 built the week ended Nov. 8, 1986.

Last week's estimated car build was 10.55 percent more than the prior week and 48.82 percent more than the year-ago week.

Truck assembly of 20,818 increased 1.01 percent over the previous week but dipped 1.70 percent from the year-ago week.

Chrysler Motors will idle its Pillette Road plant in Windsor, Ontario, for two week's beginning Jan. 2. About 2,200 hourly workers will be affected by the shutdown.

42 Big 3 plants slate Jan. layoffs

By Kathy Jackson
AUTOMOTIVE NEWS STAFF REPORTER

The Big 3 will close 42 of their 62 assembly plants for a week or more in January, giving approximately 140,000 workers in the United States and Canada an unexpected winter vacation.

The U.S. automakers are cutting back production to control inventories. At the same time, Japanese transplants plan to reopen all of their plants Jan. 2 after the Christmas shutdown.

The one- to three-week January shutdowns represent lost production of as many as 400,000 domestic cars.

This represents the biggest layoff in the hourly work force since the deep recession year of 1982. That year's car production of 4.9 million was the lowest since 1958.

"I don't think you've had anything of this current size since going back six or seven years," said auto analyst David Healy of the New York City-based investment firm Drexel, Burnham Lambert.

General Motors is laying off 88,000 workers and idling 23 of its 34 assembly plants in the United States and Canada.

The production cutbacks are not as bad as in the last full recession year. In 1982, GM had 150,000 hourly workers on layoff, said Richard F. O'Brien, vice president of personnel administration and development staff. O'Brien said GM has not hired any unskilled hourly workers since 1986.

Ford Motor Co., which has hired about 1,000 production workers this year and was clipping along at a 25 percent overtime rate at this time last year, is temporarily closing 11 of its 16 assembly plants, idling 25,400 workers. Chrysler Motors is closing 8 of 12 assembly plants, giving 25,700 workers additional time off.

The layoffs range from one to three weeks, representing about 1.1 million worker days.

The seven Japanese automakers producing vehicles in the U.S. plan no downtime next month. Like the domestics, they shut down for a week for the Christmas holidays.

Like the wholly owned Japanese plants, the Japanese-American joint ventures — Diamond-Star Motors Corp. (Chrysler Motors and

1989 Newsmakers of the Year

Inside Section:
The Year in Review
Follows Page 18

George Bush: His presidency changed the federal stance on auto issues — emissions, safety, CAFE, trade policy. He has backed up his claim that he would be the environmental president.

Sir John Egan: Took Jaguar from the pits back to respectability and made the shareholders rich; failed to remain independent and succumbed to Ford's hostile takeover.

Lee Iacocca: Cut Chrysler's budget, groused about unfair traders, announced the Detroit Jefferson Avenue plant will close, appeared callous about layoffs and lost car share.

Michael Moore: Took some unpleasant raw reality and made *Roger and Me*, a fabulously successful and hilarious look at it; has world's largest industrial corporation squirming.

J.C. "Jim" Perkins: After four years with Toyota, he left his post as chief of Lexus and returned to General Motors to apply his Japanese marketing lessons at once-dominant Chevrolet.

Donald Peterson: Announced his surprise retirement from Ford after huge successes — improved car share, intros of exciting top sellers and the purchase of Britain's Jaguar.

Roger Smith: While the GM chairman unwittingly starred in the hit movie *Roger & Me*, market share kept dipping even as the General launched more new products than at any time in its history.

Ron Tonkin: NADA's president aggressively represented dealers and made headlines all year — Rough Riders, possible dealer finance company, call for 30-day or 15-day inventory.

Kenichi Yamamoto: Mazda chairman redefined a corporate image that was nebulous at best, turned Mazda into a niche marketer and produced the marvelous Miata and MPV.

Yutaka Kume and Eiji Toyoda: Brought about Infiniti and Lexus lines, respectively; those new luxury cars from Nissan and Toyota have changed the upper end of the auto market.

AUTOMOTIVE NEWS/JOE WILLSON

Ray Green: "I want everything for dealers that Ron wants, but ... I'm more apt to negotiate."

'HI, RAY'

New leader at NADA brings a quiet style

By Charles M. Thomas
AUTOMOTIVE NEWS STAFF REPORTER

When Ray Green strides into his Springfield, Ill., Toyota dealership, his son Todd rises from behind a plain metal desk, extends a hand and says cheerfully, "Hi, Ray."

Both of his sons call him Ray, instead of Dad, an idiosyncrasy he says doesn't bother him, but does annoy his wife.

Green, 62, is the 1990 president of the National Automobile Dealers Association. His term will begin during the NADA convention in Las Vegas in February.

Soft-spoken and somewhat aloof, he is keenly aware that current president Ron Tonkin will be a tough act to follow.

"I want everything for dealers that Ron wants," said Green. "But you can climb into the ring and box, or you can negotiate. I'm more apt to negotiate with manufacturers and distributors than get into the ring with them."

He also knows that comparisons with Tonkin are inevitable, largely because Tonkin's confrontational style has been popular with dealers.

But by nature, Green will take a lower profile, preferring to work behind the scenes

Stealth and 3000GT aimed at different targets

By Jesse Snyder
AUTOMOTIVE NEWS STAFF REPORTER

TOKYO — From mechanically identical platforms, Dodge and Mitsubishi Motor Sales of America will be selling widely divergent sports cars for 1991.

The divisions will need to target different audiences if they are to reach the combined total of 30,000 to 35,000 units annually projected by Mitsubishi Motors Corp., which builds the cars. Neither Mitsubishi nor Dodge has ever offered a high-performance $30,000 car before, but they will bracket that mark next fall.

Dodge will take the low road toward its goal of more than 20,000 units in a highly competitive sports car market. It will have three versions of the Stealth, including a 300-horsepower, twin-turbo, all-wheel-drive RT model that will compete directly against Chevrolet Corvette. But most will be base model versions with a single-overhead cam, 145 hp V-6 and front-wheel drive that will be priced "well below $20,000."

"We want to get down close to Toyota Celica territory, where there is bigger volume," said Dwight L. Johnson, Dodge R-body product planner.

The balance of the Stealth line will consist of a 24-valve, 205-hp V-6 version and only 4,000 to 5,000 of the RT, which will be priced just under $30,000, said E.H. Brust, Chrysler's chief product planner.

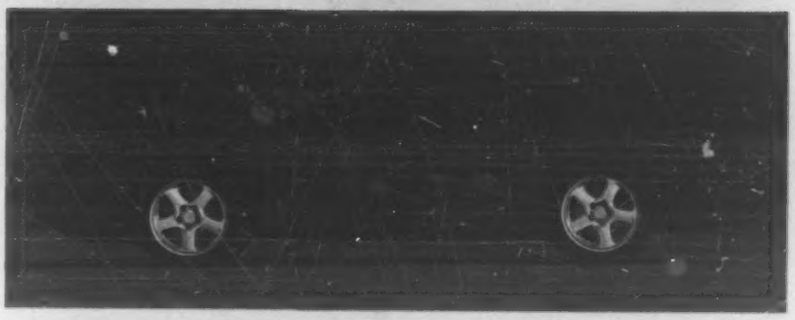
Mitsubishi will also have three versions of its 3000GT. But equipment and technological features are higher at each level for the 3000GT than the Stealth. Prices will be several thousand dollars higher, too, ranging from roughly $22,000 to $32,000.

While Dodge expects most Stealth sales from the low-priced version, Mitsubishi believes it will sell 70 percent of its volume in the top-end VR-4 model. That model will have four-wheel steering, all-wheel drive and twin-turbos. Lower-priced models are each expected to account for 15 percent of 3000GT sales.

Annual volume is projected at 10,000-12,000, said Dick Recchia, executive vice president and chief operating officer of Mitsubishi Motor Sales of America.

Dodge and Mitsubishi's different approaches not only give each other marketing breathing room, they also reflect differences in the product lineup of the two.

The 3000GT must be positioned above the higher-volume Mitsubishi Eclipse, which has a turbo, all-wheel-drive model priced about $18,000, said Ron Kusumi, product planning manager for Mitsubishi's U.S. sales arm.



Dodge will offer three versions of the Stealth, including a 300-horsepower, twin-turbo, all-wheel-drive RT model that will compete directly against the Corvette.

Car offers 300 hp, at $100 per horse

By Jesse Snyder
AUTOMOTIVE NEWS STAFF REPORTER

KITSUREGAWA, Japan — Mitsubishi will challenge more established high-end, mass market sports cars by packing its 1991 Dodge Stealth/Mitsubishi 3000GT with performance technology while under-pricing much of the competition.

The technological showcase will be the top version for Mitsubishi Motor Sales of America, the 3000GT VR-4.

It's likely to be priced at just over $30,000 when introduced next September.

Intended to compete with the Porsche 944 Turbo ($41,900), Nissan 300ZX Turbo ($33,000) and Toyota Supra Turbo ($25,200), the 3000GT VR-4 will have a 300-horsepower, 3-liter, double-overhead cam V-6 engine with twin turbochargers, twin intercoolers and 24 valves. Peak horsepower is reached at 5,500 rpm, with torque rated at 307 pounds-feet at 2,500 rpm.

Linked with a five-speed manual transmission built by West Germany's Getrag and full-time all-wheel drive with viscous clutch limited-slip center and rear differentials, the 3000GT VR-4 has a top speed of 162 mph and a 0-60 mph acceleration time of 5.4 seconds. The VR-4 comes with low-profile 45-series tires on 17-inch aluminum-alloy wheels.

The power-assisted brakes use ventilated 16-inch discs with four-piston aluminum calipers in front and ventilated 15-inch discs in the rear.

The VR-4 will come standard with Mitsubishi's first four-wheel steering system offered in the U.S. market, plus an electronically controlled adjustable suspension that gives the driver a choice of sport or touring modes.

The driver can also select normal

NADA sees million-unit dip in 1990 car-truck sales

By Charles M. Thomas
AUTOMOTIVE NEWS STAFF REPORTER

Economists at the National Automobile Dealers Association predict that sales of new cars and light-duty trucks will fall about a million units to 13.7 million in 1990.

NADA predicts weak economic growth in 1990, but no recession.

"There is a retrenchment on the part of the consumer, plus the normal cyclical downturn," said Tom Webb, NADA chief economist.

NADA expects total 1989 sales to be 14.7 million units or less. Webb estimated full-year declines of 5 percent for domestic cars, 7 percent for imports and 3 percent for light trucks.

In a press release, NADA said the monthly car payment is outpacing the rise in families' income because of higher prices and a recent reduction in the average length of a new-car loan. The last time that happened was the recession of 1980-82, Webb said.

"Monthly payments to finance new vehicles will continue to outstrip the rate of increase in family income in 1990," he said.

Webb pegged 1990 sales at 9.3 million cars and 4.4 million trucks. He expects economic growth next year of 1.9 percent with inflation at 4.5 percent.

He looks for a drop in the prime interest rate from the current 10.5 percent to 9.5-9.9 percent.

Webb also predicts a marginal weakening of the dollar against foreign currencies and a soft consumer attitude in the first quarter.

NADA said that despite the 20 percent drop in sales of subcompacts in 1989, that segment will stabilize as domestic manufacturers step up efforts to improve fuel economy ratings.

Compacts will continue to gain market share through new models and increased domestic competition. In the intermediate and full-sized segments, NADA said sales will hinge largely on General Motors' ability to reverse its loss of market share.

Lexus and Infiniti are expected to garner 7.5 percent of the luxury market. NADA predicts that those new lines will take more market share from domestic automakers than from Europeans.

And because replacement demand has dampened in the light-duty truck market, full-sized pickup sales will decline as commercial demand lessens, NADA said. Sales of sport-utility vehicles and passenger vans are expected to hold up well.

Poling Sarni

Poling to outline issues of '90s at World Congress

DETROIT — Harold "Red" Poling, the chairman-designate of Ford Motor Co., will speak on "The Challenges of the '90s: New Realities, New Responsibilities, New Responses" when he leads off the 1990 Automotive News World Congress on Sunday evening, Jan. 7.

The 14th Automotive News World Congress will be held Sunday through Wednesday, Jan. 7-10, at the Westin Hotel in Detroit and will draw industry leaders from around the world.

Register for World Congress, page E23

The second Sunday night keynote speaker will be Vincent Sarni, chairman and chief executive officer of PPG Industries. His topic is "Supplier Survival: An Agenda for the Nineties."

Poling, currently Ford's vice chairman, will succeed retiring Ford Chairman Donald Petersen next March. Poling has been one of the chief architects of the company's turnaround during the 1980s.

He became executive vice president of Ford's North American automotive operations in 1980 after serving as president and then chairman of Ford of Europe in the late 1970s. He was Ford Motor president from 1985 to 1987. s vice chairman, Poling oversees all of the company's main business groups — automotive, financial services and diversified products.

For further information, write Wendy Barhydt, World Congress, UMTRI/OSAT, 2901 Baxter Road, Ann Arbor, MI 48108-2150 or telephone 313-936-1049.

1990 WORLD CONGRESS SPEAKERS

SUNDAY, JAN. 7
7:45 p.m.
Harold "Red" Poling, vice chairman, Ford Motor Co.

U.S. auto trade deficit up 3% for September

WASHINGTON — The U.S. trade deficit for passenger cars and light trucks increased 3.3 percent in September over the year-ago total, reversing a 4.0 percent improvement in August.

The latest figures from the U.S. Commerce Department peg the automotive trade deficit in September at $3.285 billion compared with a deficit of $3.179 billion in September 1988. The value of automotive exports and imports declined for the month.

For the 12-month period through September, the deficit was $45.5 billion, 4.6 percent higher than in the previous 12 months.

The number of passenger cars imported during September declined 15.9 percent from a year ago, falling to 293,270 units with an estimated value of $3.25 billion. Imports of light trucks increased 11.2 percent for the month to 63,307 units with an estimated value of $627.7 million.

The number of passenger cars exported during September fell 60.5 percent from a year ago, to 30,769 units with an estimated value of $392.4 million. The number of light trucks exported in September increased 7.7 percent to 16,568. Light-truck exports were valued at $205.1 million.

U.S. exports of passenger cars suffered substantial setbacks in some markets. The value of exports to Japan declined 82.3 percent for the month. Passenger-car exports to Canada were down 53.3 percent.

The value of light-truck exports to Canada increased 33.8 percent during September.

U.S. automotive exports dipped 26.0 percent, from an annualized total of 948,046 vehicles as of September 1988, to 701,305 vehicles for the 12 months ended September 1989.

Imports of cars and light trucks also slipped on an annualized basis. The number of vehicles imported for the year ended September 1988 was 5.35 million. That number fell to 5.10 million units for the year ended September 1989.

Imports of passenger cars from Japan were up 9.3 percent in September; truck imports declined 13 percent.

Imports of cars from Canada were down 7.1 percent, while Canada's truck shipments increased 36.5 percent for the month.

U.S imports of West German cars fell 47.8 percent in September to 12,106 vehicles.

The number of passenger cars shipped from South Korea fell 80.3 percent in September to 9,423 units. South Korea shipped 47,759 passenger cars to the United States during September 1988.

Imports of Swedish cars fell 32.6 percent to 5,829 in September.

Mexico shipped 5,763 cars, a 56.0 percent decline from last year.

Yugoslavia did not export any vehicles to the United States in September.

Car shipments from the United Kingdom were up 24.8 percent for the month to 1,994.

Italian cars registered a 356.5 percent increase for the month, growing to 525 from 115. On an annualized basis, Italian imports are 31.9 percent ahead of last year.

France exported 119 cars to the United States in September, compared with 1,028 a year ago. French imports are 55.5 percent behind last year's annualized tally.

Brazil's car shipments to the United States were down 48.7 percent, to 3,139, in September.

Mark gets plastic hood

By Laura Clark
AUTOMOTIVE NEWS STAFF REPORTER

Ford Motor Co., showing an increased confidence in plastic body components, will use a plastic hood on its next-generation Lincoln Mark, according to industry sources.

The car — likely to be called Mark VIII — will debut in the fall of 1992 and may be the first Ford car to have a plastic hood. Ford uses a plastic hood on its Aerostar minivan.

Ford had planned to put a plastic hood on the Taurus SHO in the 1988 model year but delayed that project.,

Ford also planned to offer a composite bed on its future pickup trucks as part of its PN38 program, which was dismantled last summer.

The company uses plastic for the tailgate of both the Aerostar and the Bronco II sport-utility vehicle and recently built a Taurus concept vehicle using glass-fiber reinforced plastic for the car's main structural elements. The concept Taurus has steel doors, hood, trunk and front fenders.

The Big 3 have been looking at plastic composite materials metal parts for several years. Plastic is 25 to 30 percent lighter than steel.

General Motors currently uses a plastic hood on its Z-24 Cavalier and four plastic-bodied vehicles — the Chevrolet Corvette, Chevrolet Lumina, Pontiac Trans Sport and Oldsmobile Silhouette.

Chrysler has a fiberglass composite liftgate on its Jeep Cherokee and Wagoneer Limited wagon and is testing plastic body panel manufacturing processes at its New Mack Process Development Center in Detroit.

Industry sources said the Mark VII replacement will be built in Ford's Wixom, Mich., plant beginning in August 1992 with annual production of 30,000. It will be based on the same rear-wheel-drive platform as the Ford Thunderbird and Mercury Cougar.

The new hood will be supplied by GenCorp's Ionia, Mich., plant. GenCorp also supplies the plastic hood on the Cavalier Z24.

Ford has said that it favors using plastic body and structural parts for production runs

British makers share space at Detroit show

By Jim Henry
AUTOMOTIVE NEWS STAFF REPORTER

NEW YORK — British automakers will combine forces for the first time to mount a combined exhibit at the North American International Auto Show in Detroit next month.

The exhibit will have vehicles made by Jaguar, Lotus, Rolls-Royce and the Rover Group (Sterling, Range Rover).

Their U.S. subsidiaries are members of the British Automobile Manufacturers Association, based in Greenwich, Conn.

The 10,800-square-foot stand will have 22 cars on display, with each marque clearly identified within the group. But all will come under a "Fine Motorcars from Great Britain" banner.

An association spokesman said that by combining forces, the group can have a greater impact at the show than individual exhibits.

The companies are of vastly different sizes relative to one another, however, so in setting up the common exhibit they had to negotiate such issues as the relative size and placement of each marque's area. The budget was divided evenly, members said. Floor space alone for the exhibit will cost about $30,000

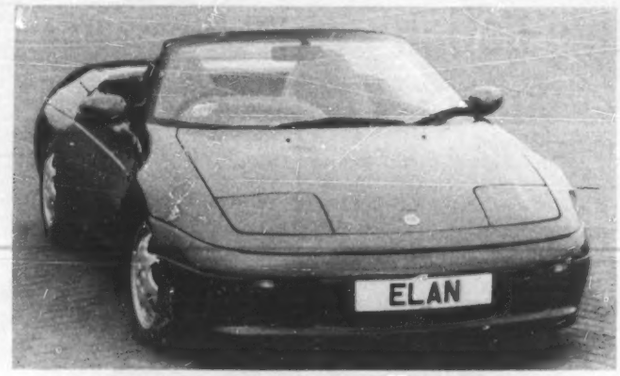
The companies will have separate exhibits at the Greater Los Angeles Auto Show, which runs concurrently with the Detroit show, Jan. 6-14. No decisions have been made regarding a common exhibit for future shows, but the possibility is being discussed, the spokesman said.

One association member, Aston Martin Lagonda of North America, will have a separate display in Detroit.

Aston Martin's V-8 Virage will make its U.S. debut in Detroit.

Also, in addition to its appearance in the association's display, Lotus Cars USA will show its new Elan convertible within the General Motors display in Detroit, said Ron Foster, president of Lotus Cars USA.

Group Lotus in England is a GM subsidiary.



Lotus' new Elan will be on display at Detroit's auto show next month.

Smyrna selects TKS paint system

SMYRNA, Tenn. — Nissan Motor Manufacturing Corp. U.S.A. has chosen TKS Industrial Co. USA as the primary paint equipment supplier for its $490 million plant expansion here.

TKS of Dublin, Ohio, is the U.S. subsidiary of Japan's Taikisha Ltd. TKS will install $45 million in equipment by November 1991.

Fluor Daniel Inc. is the general contractor for the project's body, frame and stamping plant construction. Fluor Daniel, a Greenville, S.C., engineering firm, is scheduled to complete construction in September 1991.

The Smyrna project will double Nissan's U.S. production capacity from 220,000 to 440,000 vehicles a year by 1992. In addition to light pickup trucks and the Sentra, the plant will produce an unnamed Stanza replacement at that time.

Import sales tumble 12.4% in November

By Jim Henry
AUTOMOTIVE NEWS STAFF REPORTER

NEW YORK — Imported auto sales slipped in November, falling 12.4 percent from November 1988 totals to 209,188.

The November results brought year-to-date import sales to nearly 2.6 million, or 7.3 percent below 11-month totals from last year.

Japanese imports fell about 10.2 percent for the month to 152,010. For the year, Japanese imports have declined only 3.2 percent to about 1.86 million units. But the Japanese continue to increase production in the United States and are relying less on imported products.

Import sales for Toyota Motor Sales U.S.A., for example, fell 31.1 percent to 37,125. Although Toyota's import sales are down 18.7 percent to 455,171 so far this year, the company's overall U.S. sales have risen. The difference has been increased U.S. production.

Toyota's Lexus division, which was launched in late summer, sold 3,787 cars in November.

Nissan Motor Corp. in U.S.A. was down 6.1 percent to 31,690 for November. But for the year, Nissan's import sales are running ahead of last year's pace by 16.4 percent.

European imports fell 2.8 percent for the month to 39,931 units, or a decline of about 11.6 percent through 11 months to 459,766.

Volvo Cars of North America, Audi of America, Volkswagen United States and Sterling Motor Cars all scratched out month-to-month increases. Volvo had a record November with 8,218 sales. Among European makes, only Volvo has shown a year-to-year increase. With 92,893 sales, the company is up 4.1 percent compared with the same period last year.

RECREATION ON WHEELS

Van converters say upturn in shipments is near

By Joseph Bohn
AUTOMOTIVE NEWS STAFF REPORTER

LOUISVILLE, Ky. — There's a light at the end of the RV tunnel, and many van converters see it breaking through in the next 45 to 60 days.

Although wholesale van conversion shipments have slowed, converters such as Glaval Inc. of Elkart, Ind.; Starcraft Corp. of Topeka, Ind.; and Bivouac Industries of Vandalia, Mich., said retail sales of their vans have actually been much stronger than wholesale figures suggest.

Wholesale demand for most converters has been down sharply since last summer — much more so than figures from the Recreation Vehicle Industry Association suggest.

RVIA's numbers have been somewhat misleading this year because of the new converter members that have joined the association. Previously, their shipments went unreported.

As Don Cuzzocrea, chairman of Starcraft and a member of RVIA's executive committee, pointed out, "We just approved another five new members as van converters. We keep adding new members, and they make the RVIA (shipment) numbers look strong."

Source: Recreation Vehicle Industry Association

RVIA reported industry shipments of 15,700 van conversions in October, down slightly from 15,800 in like 1988.

For 10 months, it reported van conversion shipments of 170,500, up slightly form 169,100 a year earlier.

Wholesale shipments for most converters have fallen off much more sharply than these numbers suggest.

Converters say that is largely due to dealers' efforts to reduce inventories.

"Dealers have reduced their inventories of van conversions by 40 to 45 percent since last June/July when they were at a peak," noted Ron Chevalier, Starcraft vice president of sales and marketing.

"At the same time, retail sales were up. They can't continue reducing inventory and selling as much or more product than they did a year ago without having to buy some.

> "We keep adding new members, and they make the RVIA numbers look strong."
>
> **Don Cuzzocrea**
> Starcraft chairman

"We'll be there (with strong wholesale demand) in the next 45 days. This is not a problem like in the 1970s when no vans were being sold. Vans are being retailed, but it's just a combination of conservatism among dealers in reducing their inventories and the normal winter cycle" of reduced demand that is affecting wholesale shipments currently.

Starcraft is the top-volume pool converter at GMC Truck Division and ranks third in volume at Chevrolet and fourth at Ford.

William Becker, Glaval's vice president of marketing, advertising and consumer relations, similarly sees the end of January as a "breaking point for what has been sluggish demand at the wholesale level.

"Retail has outperformed wholesale, and dealers have resisted stocking conversion vans compared to previous years," Becker added.

"By the end of January demand will be great enough to where dealers get back to a more aggressive ordering pattern."

Glaval is the second-highest volume converter at Chevrolet, Ford and GMC.

It recently picked up a pool account with Dodge and is developing prototype units to adapt the Dodge chassis to the five conversion packages it offers.

Dave Green, Bivouac marketing manager, said retail demand is still strong, particularly in the South.

Bivouac's wholesale orders are still running "slightly ahead of last year," Green added.

CUTTING COSTS: *Converters attack expenses; plants, marketing affected*

By Joseph Bohn
AUTOMOTIVE NEWS STAFF REPORTER

LOUISVILLE, Ky. — In the wake of a softer market, some major van converters like Starcraft Corp. of Topeka, Ind., and Coachmen Vans of Elkhart, Ind., are sharpening their manufacturing efficiencies and redirecting some promotional efforts.

Starcraft, for example, is spending $1 million with a consulting firm to improve its operating efficiency.

William Snook, president of Coachmen Vans and Good Times Vans, Grandview, Texas, elected to skip February's National Automobile Dealers Association convention in favor of more private dealer promotions.

"We've been in there (NADA) for three consecutive years," he said. "The location was good. The space was good. But it didn't justify the costs."

He said working with dealers on a local level would provide more return on the company's promotional investment.

Coachmen has trimmed some of its marketing support staff and is looking "deeply into our manufacturing costs," Snook said.

"All the guys (converters) are talking about ordering fewer days' supply of vehicles (chassis), especially because of having to pay interest on the vehicles," under new Ford and Chevrolet consignment pool program changes.

Coachmen is operating with just five days' raw materials for its production operations, but it still maintains a 30 days' supply of chassis.

It uses only 10 work stations instead of 15 to 18 to produce a finished van conversion and is even looking at paint graphics that would yield the same visual effect but require less labor to produce.

> "We have to provide quality and value, but we also have to reduce our costs."
>
> **William Snook**
> Coachmen Vans & Good Time Vans

"Every product decision has a cost basis behind it," Snook said. "We have to provide quality and value, but we also have to reduce our costs."

In an effort to improve its Texas operation, the company recently named John Kelley general manager of Good Times Vans.

Meanwhile, Starcraft, purchased by a group of company officials and investors in a leveraged buyout 2½ years ago, has reduced debt from the buyout to $29 million from a previous $73 million, according to Don Cuzzocrea, company president.

While profitable, Starcraft is still spending $1 million on a management consulting firm, the Institute of Management Resources of Westlake Village, Calif., to further improve its efficiency.

"We're investing $1 million, and we hope to save about $4 million to $5 million" from the investment, Cuzzocrea said.

"We're trying to cut waste and expense where we can, but we always run fairly lean.

"There is a limit to how many different things you can change," he added.

Starcraft will continue to emphasize trade advertising because "none of us in this industry really has enough money to advertise to the end-consumer," Cuzzocrea said.

But he, like Coachmen Vans; Explorer Van Co. of Warsaw, Ind.; and Bivouac Industries of Vandalia, Mich., plans more local promotions, tied in with dealers.

"You'll see a lot of people doing that," Cuzzocrea predicted.

"It dramatically strengthens your relationship with the dealer and his salespeople. It has a tremendous learning potential for both sides," he added.

Starcraft sold 15,500 van conversions in the 1989 model year and plans to sell 16,000 during 1990.

About 20 percent of its sales — $75 million worth of product — went to overseas export markets.

The competitive nature of the U.S. market "doesn't allow you to make that much money," Cuzzocrea said.

"Last year, we made less money per unit, but sold more units and made more money in total," he added.

This year, it came out with a $3,250 wholesale-price conversion, but has shied away from some of the riskier, costlier incentives used by competitors.

The company did add three field sales representatives since the start of the 1990 model year. And its West Coast market continues to be very strong.

The company is now exploring new programs, such as offering optional extended warranties on its vans. And it has developed some conversion projects for pickup trucks.

Overall, Cuzzocrea is confident the firm will increase its market share, particularly in view of the many smaller converters closing their doors.

Down the road, he would like to expand into specialty automotive work, such as that done by American Sunroof Co. of Southgate, Mich., and Cars & Concepts of Brighton, Mich.

"We don't have a (car) project right now, but I think that it's a natural progression of our production and marketing skills," Cuzzocrea said.

National Coach's new Landmark Quest

National Coach Corp., Gardena, Calif., offers a restyled Quest model as part of its Landmark series. The travel van comes with stainless steel interior accents and indirect lighting from a full-length overhead console.

RV BRIEFS

Chevy RV record

LOUISVILLE, Ky. — Chevrolet wholesaled a record 160,000 vehicles to RV and commercial body upfitters and motor home manufacturers through its consignment pool system in the 1989 model year.

Approximately 125,000 of these were full- and compact-sized van chassis, Suburbans and pickups. Some 25,000 were motor homes and cutaways and the other 10,000 were commercial units for body upfitters, according to Thomas A. Pfingst, Chevrolet assistant director of fleet sales.

Pfingst, attending the National Recreation Vehicle Association's Trade Show, believes 1990 will be another good year.

"Baby-boomers who are 35 to 49 years old have been entering the RV market, and we see that trend and the trend toward short or weekend vacations continuing," Pfingst said.

Lawrence buys Daystar

ELKHART, Ind. — John Lawrence, former general manager for Coleman Seating Co. of Elkhart, purchased Daystar Enterprises, a van conversion seating manufacturer, from Helen Krueger and Larry Lippert.

Lawrence has changed the company's name from Daystar to Knight Seating. He is emphasizing mid- to low-priced van conversion seats in his sales.

Sport-utility surge seen

LANHAM, Md. — Sport utilities will overtake minivans in sales over the next 10 years, according to a light-truck market study by the Automotive Parts and Accessories Association's Foundation for Aftermarket Industry Research.

The study bases its conclusion partly on the fact that the age group most likely to buy a sport-utility will expand by 46 percent over the next decade, outstripping those who typically buy minivans.

The study is designed to help aftermarket manufacturers, buyers and marketing executives position their products for this market.

The Foundation for Aftermarket Industry Research drew on the results of an exclusive Automotive Parts and Accessories Foundation survey of new owners of light trucks as well as other industry sources.

64,109 '86 Ford products headed for emissions fix

DEARBORN, Mich. — Ford Motor Co. is voluntarily recalling 64,109 1986 cars because of emissions-related concerns.

Being recalled are the 1986 Lincoln Town Car, Continental and Mark VII; Ford Crown Victoria, Thunderbird and Mustang; and Mercury Grand Marquis, Cougar and Capri models equipped with 5-liter or 5-liter high-output engines.

Also involved are certain 1987 Mark VIIs equipped with 5-liter high-output engines.

Ford dealers are being asked to replace the fuel injectors and thermactor air control valve and clean the idle air control bypass valve on all base 5-liter engines involved. They will also be asked to replace the catalytic converter assemblies and clean the idle air control bypass valve on all 5-liter high-output engines involved.

Of the vehicles affected, 64,102 are in the United States, and seven are in export locations.

In a second action, Ford is voluntarily recalling 115 F-250 and F-350 light trucks equipped with 5.8-liter engines and manual transmissions to assure acceptable exhaust emissions levels. The vehicles are 1989 models.

They were equipped with incorrect thermactor silencers and thermactor muffler hoses. Testing conducted by Ford indicated that the vehicles may exceed federal carbon monoxide exhaust emissions standards.

On these vehicles, Ford dealers are being asked to replace the thermactor silencer and thermactor muffler hose.

Of the vehicles affected, 109 are in the United States, and six are in export locations.

32,000 '86 Mercurys, Fords recalled in Calif.

Ford Motor Co. is voluntarily recalling approximately 32,000 1986 California-model Ford Mustang, Thunderbird and LTD and Mercury Capri, Cougar and Marquis cars equipped with 3.8-liter, V-6 engines to assure acceptable exhaust emission levels.

In-use vehicle emissions testing conducted by the California Air Resources Board indicated that hydrocarbon exhaust emissions levels may exceed applicable standards.

To correct that, Ford dealers will install a vacuum retard delay valve to slow engine ignition timing. The recall affects only vehicles made for sale in California.

UAW dissident move grows

By Kathy Jackson
AUTOMOTIVE NEWS STAFF REPORTER

DETROIT — UAW New Directions, the assertive new political entity within the UAW union, now boasts nearly 600 dues-paying members.

At a Dec. 9 board meeting in Detroit, the organization's first since it was formally commenced at an October conference in St. Louis, national organizing coordinator Jerry Tucker said members now represent 400 of the 1,800 UAW locals nationwide. "That's a significant penetration," he said.

New Directions members basically are auto workers who believe that "the union has matured in the wrong direction — bureaucracy," Tucker said.

The 26 board members, representing several states around the country, met to discuss proposals they believe need to be addressed if the UAW is to be a force during the next decade and especially during next year's bargaining talks with the Big 3 automakers.

Tucker said those issues included modern operating agreements and the union's failure to organize some of the transplant factories. He said that modern operating agreements represent "too much of a business relationship with companies."

He said the UAW has failed to attract the transplant workers because the union's proposals are the same as the companies' proposals.

A 35-hour work week may be one option the union could fight for as a means to attract unorganized workers, Tucker said.

Dues are $30 annually. The organization gets out its message via a newsletter, three of which have been published since August. New Directions plans to publish eight newsletters annually.

GM Ohio plant may lose 700 jobs

PARMA, Ohio — A General Motors components plant here could lose as many as 700 jobs when GM transfers production of driveshafts to a Hydra-matic Division plant in Three Rivers, Mich.

Jack Otter, media relations manager for GM's Saginaw Division, said the change will begin next spring when the Three Rivers plant becomes part of Saginaw Division, a lead division for steering and drivetrains for GM.

The $40 million retooling at Three Rivers should be completed in 1991, Otter said.

Three Rivers currently produces the 200 4—R transmission that will be discontinued at the end of the 1990 model year. Workers thought the plant would be shut down at that time.

"There were grown people crying when it was announced that we would have a future," said Bill Webster, bargaining chairman for UAW Local 2093, which represents the 685 hourly employees at Three Rivers.

The Parma plant, operated by the Chevrolet-Pontiac-Canada Group, has a work force of 4,260, and will continue with its stamping operation and the manufacture of transmission components.

But Roger Montgomery, bargaining chairman for Local 1005 in Parma, said the move still will be devastating to the Cleveland suburb of 90,000. He said some of Parma's hourly workers should have transfer rights to Three Rivers, and he said he expects they will take advantage of that right.

GREEN

FROM PAGE 1

to achieve his goals.

"I will not be as visible as Tonkin," he said. "I'm not as comfortable as he is in the spotlight. I prefer to use the people and staff of NADA who are waiting to be directed."

He characterized Tonkin as a one-man show, whereas he will be more of a team player.

Green recognizes Tonkin's enormous contribution as president. He has, more than any other president, made the general public aware of NADA and brought dealer concerns into the open.

"I don't think he (Tonkin) can get things done by upsetting the manufacturers the way he has," said Green. "But he has prepared the way for me. The issues I will address are the same. But I will take a different approach."

As a result, Green will launch his term by announcing at the NADA convention a model franchise agreement that he and 17 dealers have been working on for four months. It is a model he hopes automakers will adopt.

Although he declined to discuss details, he said it is not unlike Saturn's franchise agreement.

Green is familiar with that agreement because he was one of 15 dealers who provided General Motors with input on it.

He praised the Saturn agreement for its spirit of fairness, but said the model franchise will be tougher on manufacturers on issues like the disposition of dealer grievances.

"The franchise must involve the dealer at every decision-making level," he said. "It should be a team effort between the manufacturer and the dealer."

Green also is jittery about the 1990 economic outlook.

"Our problem is overproduction," he said. "More cars chasing fewer customers. This is not a recession. It is a depression."

He faults the manufacturers alone for the customer's addiction to rebates and incentives to sell cars.

And like Tonkin, he is opposed to fleet subsidies, particularly for the daily rental industry.

Active in the political arena, Green has served on the State of Illinois Committee for Industry and Economic Development. And as chairman of the Automotive Industry Advisory Board for the Secretary of State, he has made the state agency aware of dealer concerns.

He has held a variety of NADA offices since 1975. But his special interest has been the Dealer Election Action Committee. He raised $1.2 million for it in his first year as a member of the committee by initiating a "President's Club."

Only dealers who contribute $5,000 are eligible for membership.

For Green, political action committees are a necessary evil. "I would prefer not to have them, but it is a way for everyone to get involved in the political process," he said. "If you want to have clout, then you must have them."

Green believes there is a revolution under way in the automotive industry. "The prime mover in setting the direction of change between the manufacturer and the dealer should be NADA," he said.

He is deeply committed to his family, and each of his four children, or their spouses, are involved in the family business — car dealerships.

Green wants all of them to have their own dealerships some day. They all are part owners of Green's dealerships now.

"I started buying dealerships in 1975," he said. "The kids wanted into the business, and we couldn't have the whole family in one store."

It's a goal he has almost achieved. He's currently on the prowl for one more dealership for the younger of his two daughters.

Typical of his conservative Midwest background, he keeps tabs on his four Illinois dealerships by visiting them every week despite the hours he must spend on the road.

The drive from his Green on Dirksen Volkswagen-Audi-Yugo-Suzuki-Hyundai dealership in Springfield to Green Chevrolet-Mazda-Jeep in Danville takes more than two hours. He also owns Ray Green Chevrolet in Jacksonville and Green Toyota in Springfield.

Green isn't one to waste time. While driving, he pumps a forearm exerciser to keep in shape.

He also has several cassette tapes neatly arranged and within easy reach on the transmission tunnel hump in the floor.

One is a motivational tape called "Unlock your Personal Power." Another is a message from Tonkin to dealers. And yet another is "The Liberator," readings of 19th century lecturer and writer William Lloyd Garrison.

Green, who started in the automobile business in 1952 as a field representative for General Motors Acceptance Corp., gives the impression of having everything under control — a sense of what he can accomplish and an acceptance of what he cannot.

His four dealerships are all mid-sized. Each sells 600 to 900 new cars annually. They are located in relatively small towns.

A wry grin steals across his lips when he talks about his one big mistake — a health spa that he purchased three years ago.

Not normally given to impulsive buys, Green bought the spa at an auction.

He had exercised there several times a week. When the spa went bankrupt, he went to the auction to pick up a couple of his favorite exercise machines.

But when he saw that the building and the property were being underbid, he raised his hand.

When the price reached $240,000, Green found himself the owner of Fitness World Health Club — lock, stock and barbell.

"It was a mistake," he muses. "I bought it on impulse."

After three years, Fitness World is now profitable.

Green operates Green Holding Co., preferring to be a consultant to his sons and son-in-law who manage the dealerships on a day-to-day basis. His offices there are small and austere.

He has owned nine dealerships during the last 16 years. He obtained his first new-car franchise in 1958.

Green also has three used-car dealerships called Payday Motors that specialize in high-risk customers.

But he admits that his customers may be less of a risk than those of similar operations.

Many of the services a dealer would normally seek on the outside, Green does himself.

For example, he established his own advertising agency to reduce costs. It now services other area car dealerships.

He once owned an in-house extended warranty company, but dissolved it after hearing that another dealer was unable to sell his store because of the potential liabilities of its outstanding warranties.

Green is looking forward to the challenge of his NADA presidency. His agenda is full. Manufacturer-dealer relations isn't the only item on it.

He views clean-air legislation as a potential threat to car and truck sales.

Referring to the Yugo fiasco, Green favors laws mandating that any new manufacturer or distributor post bonds or some kind of fund to guarantee parts and labor for vehicles under warranty in the event they go out of business.

And because computer software is so expensive, he would like to see it standardized to reduce dealer costs.

LAYOFFS

FROM PAGE 1

Mitsubishi) and New United Motor Manufacturing Inc. (GM and Toyota) — will not have layoffs.

The blame for production cutbacks falls on the low sales of the fourth quarter, which have left a 90-day supply of unsold cars, from subcompacts to full-sized Cadillacs.

Early December car sales were down 29.7 percent from the same period last year. Truck sales were down 15.6 percent.

Plants producing Chevrolet Blazers and GMC Jimmys face some of the longer down times.

Ford plants that produce fullsize and luxury models and Chrysler plants that produce minivans don't appear to be affected by the cutbacks.

"The last 60 days, things have been awfully stagnant," said Dick Routh, assistant manager in Ford's corporate news department. "If interest rates go down, that certainly will help" car sales.

Canadian auto workers are more blunt in their assessment of interest rates.

In a prepared statement, Robert Nickerson, national secretary-treasurer for the Canadian Auto Workers union, said the temporary and indefinite layoffs in Canada show that the Canadian government can wreck the auto industry with its high interest rate strategy.

"As a union going into Big 3 bargaining in 1990, we know we can't negotiate guaranteed jobs, but we can go after stronger income security language," Nickerson said.

Analyst Healy said, "Current sales are unusually depressed, and I don't see any real recovery until 1991."

UAW officials and the automakers say there must be a recovery before then.

"The second quarter (of 1990) will be crucial," said UAW spokesman Peter Laarman. Spring is generally when car sales are strongest.

Laarman characterized the January layoffs as serious, but said that since most workers have a call-back date, no one is really alarmed.

At some plants, there is no call back. Late last week, GM announced an indefinite layoff of the second shift at Linden, N.J., idling 1,600 workers. About 1,040 GM workers in Canada also face indefinite layoffs.

Laarman said supplemental unemployment benefits funds of the Big 3 automakers are in good shape. SUB funds, combined with unemployment payments, provide laid-off workers with 95 percent of their take-home pay for as long as the fund is solvent.

Laarman said Ford's SUB fund is in the best shape, followed by Chrysler and then GM. He said he did not know how many credits were in each fund, "but we don't see any crisis for the first six months" of 1990.

It's not known if the January layoffs will affect supplier plants.

Some suppliers choose to build up their own inventory during an assembly plant shutdown, while others trim or halt production.

But said Sheldon Wesson, spokesman for the American Iron and Steel Institute in Washington: "As soon as the automotive industry sneezes, steel reaches for a handkerchief."

Six-speed Shamal

Maserati's new Shamal coupe has a new V-8 engine producing 325 horsepower. It is mated to a six-speed manual transmission. The Shamal, which will cost $70,000 to $80,000, has a top speed of 160 mph.

Dealership is community center

Christmas concert and candles can displace new Toyotas

By Mary Ann Maskery
AUTOMOTIVE NEWS STAFF REPORTER

TOKYO — The cars were moved off the showroom floor for the annual Christmas concert at the Toyota Twin Cam dealership on the outskirts of Nagoya. Families from the neighborhood filled the dealership for the music program, and then the lights were dimmed for the candlelight session to conclude the evening.

It was not an unusual event for Twin Cam. Music concerts are such a regular affair that a white piano is a permanent fixture in the showroom.

Nor was it the only event to attract members of the community. Since it was established two years ago, Twin Cam has come to provide many of the services usually associated with shopping malls in the United States.

It is an example of how far dealers feel they have to go to teach Japanese customers a new idea: a showroom approach to selling.

Until recently, cars were sold in Japan on a door-to-door basis. Salesmen worked out of street-front shops and made calls at the homes of potential customers with stacks of catalogues and brochures under their arms.

But as customers learned to demand more than just a new version of the white Corolla they bought four years before, dealers had to find ways to entice buyers with a variety of choices. The result was the introduction of the showroom.

In order to give buyers a reason to come in, some dealers set up small gift shops to sell anything from auto parts to clothing. Some larger dealers tied up with fast food operations, like McDonald's.

But Twin Cam, one of 57 outlets for Aichi Toyota, takes the process one step further. It has become a community hang-out for young and old alike.

Twin Cam is situated off a main highway in a suburban area that is short on many social amenities. The dealership fills the gap. There is a restaurant, gift shop and video store.

There is also a meeting hall behind the showroom that is outfitted with audio and video equipment. On Tuesdays, Twin Cam holds a used-car auction there, providing buyers with a video display of the cars on sale, and the opportunity to bid from their chair using an electronic switch. The company sells 400 cars in every auction that way, one car every 20 seconds. On non-auction days, the hall is available to the community for meetings, or video showings.

Squeezed between the meeting hall and the used-car lot on Twin Cam's 4.86 acres is a drive-in theater. In all of Japan there are only 12 drive-in theaters and Twin Cam has the only one in an automobile dealership. It is big enough for 108 cars a showing.

When Aichi Toyota Executive Director Kiminori Furuta first considered the drive-in idea more than two years ago, he thought he might lose money on it. He estimated a loss of 10 million yen ($72,000) every year. After all, he said, if it were a popular idea there would be more drive-ins in Japan.

But he decided to go ahead with it. He figured he would spend that much on advertising and decided the drive-in might provide an advertising device if nothing else.

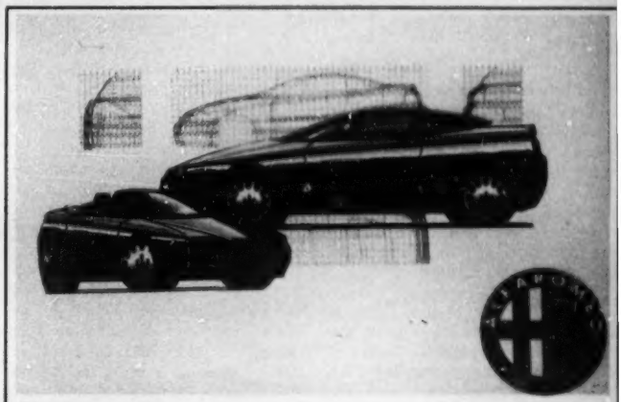
Two years later, Furuta said he is making, not losing, 10 million yen a year on the drive-in. For a popular film like *Top Gun* or *The Last Emperor*, he has to turn cars away.

The Twin Cam showroom is now a tour stop for Toyota visitors. When Hector Dupuis, executive vice president for Toyota Canada, went there with a group of international distributors, he came away determined to take what he thinks is "a fantastic concept" back home.

"Customer satisfaction is on everybody's mind," he said, "so why not make the showroom a pleasant place."

Twin Cam is part of Aichi Toyota, an independent dealership, and one of the most successful in Japan.

Toyota Motor Corp. is planning a similar concept for what will be a Toyota-owned showroom in the busy Ikebukuro district of Tokyo. But whereas Twin Cam filled an obvious need in a community off the main thoroughfare, the Ikebukuro showroom will have to be more original. Toyota officials say they are still working on ideas to provide a service that is not already available in what is a crowded shopping and entertainment district. They hope to introduce the concept next April.



Monster of a car

At Alfa Romeo experimental department they call it "Mostro II" following the nickname Mostro (meaning monster) they gave to the none-too-pretty SZ coupe the first time they saw it. This car's looks have improved thanks to designer Walter Da Silva's work at the Alfa Romeo styling center in Milan, Italy. The two-seat coupe "Mostro II", conceived as a successor to the SZ, is planned for a 1991 Geneva show launch.

STEALTH

FROM PAGE 3

or quiet modes on the adjustable muffler system.

A four-wheel, anti-lock braking system is standard, as is a driver-side air bag.

The top-end Mitsubishi model also has an active air-management system, which functions automatically at highway and higher speeds.

The front air dam is lowered and the rear spoiler is tilted 15 degrees at higher speeds to reduce the amount of air flowing under the car and increase downforce on the rear wheels for better traction.

The technology is adapted from Mitsubishi's HSR-II concept car, which made its debut at the Tokyo Motor Show in October.

The only options on the 3000GT VR-4 are leather seats, a compact disc audio system and — after May 1991 — a sunroof.

The top version of the Dodge Stealth will have most of the same equipment as the VR-4 except the active air-management system. It's expected to list for less than $30,000.

Mitsubishi Motor Sales of America explored the possibility of adding a convertible version a year or two after introduction.

Because of low volume prospects in the Japanese market, development is focusing on a U.S. converter, although no commitment has been made, company officials said.

European sales refuse to drop; record is certain

By Richard Johnson
AUTOMOTIVE NEWS STAFF REPORTER

FRANKFURT, West Germany — Western European new-car sales in November continued to resist the downturn that most industry experts regard as inevitable — and just around the corner.

While the growth of recent years has slowed, sales last month were up 2.1 percent over November 1988, at 1,033,700 units. If December sales match last December's, the full-year total will be 13.5 million cars, passing even the most optimistic of forecasts.

Another record year is already assured. Sales through the first 11 months totaled 12,586,500, 4.5 percent over the 1988 tally for 11 months, according to industry estimates compiled by Automotive News. The full-year total in 1988 was 12,956,500.

Volkswagen AG seems poised to finish as sales leader for the fourth consecutive year. The West German group, including the Audi and Seat brands, held a lead of 51,800 units over Fiat Auto S.p.A. — equal to four-tenths of a point in market share — going into the final month.

VW group sales through November totaled 1,878,100, a 14.9 percent share and an increase of 6 percent over 1988. In November, the VW group posted a 3.7 percent increase to 159,600, outselling second-place Fiat by 12,500.

Fiat, including Alfa Romeo and Lancia, slipped 1.1 percent in November to 147,100, according to preliminary estimates, but was up 3.2 percent for the year at 1,826,300, a 14.5 percent share.

Peugeot S.A. ranked third with a 12.8 percent slice of the market on 11-month sales of 1,613,000, a 4.6 percent increase over 1988. Ford was next at 1,471,900 units, an improvement of 7.2 percent and equal to 11.7 percent of the market.

General Motors made the biggest gain in November among Europe's six volume makers, with sales up 16.6 percent to 119,600. For 11 months in Europe, GM was the only major automaker with sales growth in double figures — a 10.3 percent increase to 1,400,500 and an 11.1 percent share.

Among the specialist brands, BMW began to fade some after a strong first half. With sales down 12.7 percent in Germany during November to 12,600 units, BMW's European sales for the month were off 8.5 percent to 24,900. But on the strength of its nearly two-year-old 5 series, BMW has improved sales overall in 1989 by 7.3 percent to 356,700, a 2.8 percent share.

Japanese makes were at almost exactly the same position as in 1988. Combined sales rose from 1,371,500 in the first 11 months of 1988 to 1,371,900 through November of 1989.

Troubled plant resumes making air-bag chemical

By Lindsay Chappell
AUTOMOTIVE NEWS STAFF REPORTER

A problem-plagued Canadian producer of a vital chemical for air bags resumed limited production this month, six weeks after a small fire forced the company to halt and re-evaluate its manufacturing process.

But lingering production problems could still affect U.S. automakers, which are now equipping their cars with millions of air bags annually.

CIL Corp., a Canadian explosives maker, reported that its McMasterville, Quebec, facility is again producing sodium azide, the volatile chemical used to trigger auto air-bag inflations. But CIL is producing the chemical in a modified form.

The plant has been closed twice since October as the result of fires. It is the sole source of sodium azide for North American production.

The facility is now producing "wet" sodium azide, an incomplete stage for the product that does not permit final air-bag production. A company spokeswoman said it could be as long as three months before the plant resumes drying the chemical.

She said the fires were caused by the crucial drying process and that an international committee of chemical engineers is still trying to determine the cause.

"We are now stockpiling the wet azide until we can resume drying it," the spokeswoman said.

The news only partially relieves worries for the factory's only two customers — Morton International and TRW Inc., the two dominant air-bag makers. CIL has begun selling some of the wet sodium azide to Morton, which has the necessary processing facilities. TRW does not.

TRW said last month that its supply of sodium azide would last only until the end of December. A company spokesman now says TRW will be able to obtain enough sodium azide to continue air-bag production through January.

The spokesman also said that TRW is seeking a third party to process wet sodium azide from CIL.

CIL vowed in November that it would not resume production until safety concerns were addressed and more was learned about sodium azide's volatile properties.

New highway safety regulations went into effect in September and are expected to increase the demand for air bags to 5 million units a year by 1993. All U.S. cars must now be equipped with passive restraints, and in many cases automakers are using air bags to comply with the rules.

After the second fire at the McMasterville plant, both Morton and TRW said they had made arrangements to source some sodium azide from the two other suppliers, in West Germany and Japan.

Construction of a fourth sodium azide plant was completed recently near Hyderabad, India. It is owned by Barfin Chemicals, an Indian firm, and is producing small amounts of the material.

Ford and GM expand incentives

By Arlena Sawyers and Mary Connelly
AUTOMOTIVE NEWS STAFF REPORTERS

Last week, Ford Motor Co. and General Motors followed Chrysler Motors' lead by increasing consumer and/or dealer incentives on many products.

Ford boosted incentives on 28 vehicles and placed first-time incentives on 1989 and 1990 Aerostar minivans, 1990 Ford LTD Crown Victoria and 1990 Mercury Grand Marquis. The Aerostar rebate is $1,000, and the incentive on the LTD Crown Victoria and Grand Marquis is $750.

To qualify for Ford's rebate, buyers must take delivery from dealer stock by Feb. 15.

Meanwhile, Oldsmobile, Chevrolet and Buick enhanced their programs.

The week before, Chrysler placed first-time customer rebates of $1,000 on its minivans and instituted a "guaranteed rebate" program for several lines. The guarantee assures buyers that Chrysler will pay them the difference if the rebates on those 1990 models is increased through Sept. 30, 1990.

Also for the first time, Chrysler is offering a dealer rebate on minivans. Dealers who order minivans by Dec. 31 receive a $250 rebate.

During the first week of Chrysler's new rebates, floor traffic and sales did not skyrocket, dealers said.

Both Chrysler and Ford dealers are guardedly optimistic about the restructured programs.

Chrysler dealers said they expect the heaviest response to the minivan rebate after Jan. 1 and are ordering more vans than anticipated because of the retail/dealer incentives.

Reggie Dean, vice president and general manager at Heritage Chrysler-Plymouth-Dodge in Bainbridge, Ga., said he is "undecided" whether sales will materialize result of Chrysler's enhanced gram.

Chrysler's dealer rebate is signed to boost orders and Chrysler maintain first-qua minivan production schedule the Windsor, Ontario; and Louis No. 2 assembly plants.

Ford's revamped incentive gram covers the following and 1990 vehicles: Festiva L, 000; Festiva L Plus/LX, $1,000 cort, $1,000; Probe GL/LX, 000; Probe GT, $1,000; Mus 2.3-liter, $1,000; Tempo, $1, Taurus and Taurus SHO, $1, Thunderbird, $1,000; Bronc $1,250; Bronco, $1,000; Ra $1,000; E-150 Van, $750; Wagon, $500; Topaz, $1,000; S $1,000; Cougar, $1,000; Tracer, $1,500; 1990 Contine $1,000; 1989 XR4Ti, $4,000; Scorpio, $4,000; and 1989 Sc $3,000.

A special finance option added to the 1989 and 1990 A tar at 4.8 percent for 24, 36 an months and 10.9 percent fo months. The finance optio 1989 and 1990 Ford Econolin 150 van and all 1989 and Club Wagons is 6.9 percent fo months; 8.9 percent for 36 mo 9.9 percent for 48 months and percent for 60 months.

Ford also adjusted its deale centives. The $200 to $500 d incentive on 1989 and 1990 A star and the $200 to $400 deale centive on 1989 and 1990 Fe have been discontinued. De cash on the Taurus SHO has reduced from $1,000 to $500.

Oldsmobile doubled dealer centives to $1,000 on the 1990 lass Calais; 1989 and 1990 Cu Ciera; and 1989 88 Royale. program expires Jan. 3.

Chevrolet announced custo incentives on the following: Metro, $600; 1990 Storm, $ 1990 Cavalier, Corsica, Beretta Camaro, $1,000; 1990 Lum coupe and sedan, $1,000; 1990 price, $1,000 or $1,500 with dealer participation; and 1989 1990 Astro, $1,000.

Beginning Dec. 26 customers get $750 rebates on 1990 CK a matic pickups and $600 on RV pickups.

Chevrolet customer cash in tives are in lieu of a special fin package. Finance rates on all v cles except Lumina range from percent to 10.9 percent depen on the length of the contract. nance rates on Luminas are percent for 24-, 36- and 48-mo contracts and 10.9 on 60-mo contracts. Dealers are eligibl receive $1,000 on 1989 and Tracker and $2,000 to $4,000 pending on quotas) on 1989 vette. The program ends Feb. 2.

Buick announced several in tives that expire Feb. 2. It is fering $500 to $1,250 on Buick Skylark, Century, Regal LeSabre, depending on model option package.

It is offering $600 on 1989 1990 Skylark, Century and R to first-time buyers who fin their vehicles through Gen Motors Acceptance Corp. This centive must be applied toward downpayment and will be directly to the dealer by Bu Buick's alternative financing gram remains unchanged. B increased its dealer incentive 1989 Regals to $1,500 from 000.

Mitsubishi Motor Sales of A ica is offering a $1,000 rebat 1990 Eclipse buyers until Jan.

PRODUCTION

'89 output: 10.9 million, off 300,000

By Kathy Boyer
AUTOMOTIVE NEWS STAFF REPORTER

U.S. car and truckmakers estimate their 1989 calendar year build at 10,914,124 units, 2.81 percent below the 1988 running total of 11,230,006.

Car production slipped 3.95 percent to an estimated 6,821,556 compared with the running total of 7,102,157 assembled in 1988.

Truck output is scheduled to fall a bit short of last year at 4,092,568, 0.85 percent below the 1988 running tally of 4,127,849.

Last week, automakers scheduled 136,220 units, 4.35 percent below the prior week and 15.46 percent below the year-ago week.

Scheduled production last week was split as follows: General Motors, 48.31 percent; Ford Motor Co., 23.64 percent; Chrysler Motors, 8.52 percent; Honda of America Manufacturing, 5.60 percent; Mazda Motor Manufacturing (U.S.A.) Corp., 3.29 percent; Toyota Motor Manufacturing U.S.A., 3.06 percent; New United Motor Manufacturing Inc., 2.86 percent; Diamond-Star Motors, 2.81 percent; Nissan Motor Manufacturing Corp. U.S.A., 1.51 percent; and Subaru-Isuzu Automotive, 0.40 percent.

Last week's scheduled truck production of 80,559 dipped 2.27 percent from the prior week and slipped 0.44 percent from the year-ago week.

GM plans to temporarily idle 23 assembly plants in the United States and Canada in January due to poor sales and high inventory, laying off approximately 89,800 hourly workers. Downtime will range from one to three weeks with all plants scheduled to resume output by Jan. 22.

Ford announced it will close 11 plants, idling about 25,430 workers during January, and Chrysler will shut eight plants affecting about 25,700 workers.

Chrysler's Jefferson Avenue plant in Detroit resumed output last week as inventories were adjusted.

All assembly plants closed last Friday for the holidays.

Canada's total down only 4,224

Calendar-year car and truck production in Canada is scheduled to fall only 4,224 units short of 1988. The estimated 1989 build of 1,957,296 vehicles is 0.22 percent below last year's running total of 1,961,520.

Car assembly is targeted at 1,016,274, 1.10 percent below the 1988 running estimate of 1,027,528.

Truck production for 1989 should end up at about 941,022 or 0.75 percent more than the 1988 running total of 933,992.

Scheduled car output of 27,505 last week rose 5.21 percent over the prior week and jumped 70.34 percent over the year-ago week.

Last week's estimated truck production of 17,928 dipped 7.46 percent from the previous week and declined 7.56 percent from the year-ago week.

10 YEARS OF TUMULT

Lessons of the '80s could help carmakers pass test of the '90s

By Lindsay Chappell
AUTOMOTIVE NEWS STAFF REPORTER

Lee Iacocca's name is on the lips of housewives everywhere. From now on, your Jaguar is really a Ford, but Ford is a savings and loan. Suzuki sells Pontiacs in Yokahama, while Chevrolet sells Suzukis in Pittsburgh. And the governor of Ohio is waiting for Honda to relocate its corporate headquarters to Columbus.

Decade in photos, Pages 4-7

To say the 1980s were a long, strange trip for the U.S. auto business is putting it blandly. Like no other decade before, the 1980s overturned most everything in their path, from corporate structures to international market shares, from factory work rules to showroom architecture. It was a decade of records and miserable losses, of bleak outlooks and brilliant turnarounds.

It was as if something strange emanated from the back of those new micro-computers that appeared on secretaries' desks around 1981: a strange urge to cut costs, reduce employment, buy robots, move factories, retrain employees, diversify and, generally speaking, reduce back seat legroom.

The tumult started in 1980 with Chrysler Corp. paying its bills with a $1.2 billion loan guaranteed by Congress to save the teetering carmaker.

Northern Ireland became the producer of a hot new gullwing sports car. Then its creator — former Pontiac phenom John Z. DeLorean — was accused and later acquitted of trafficking in cocaine.

By decade's end, consumers were driving faster, getting tickets for not wearing seat belts, telephoning each other as they drove and clamoring for products that 10 years earlier were largely considered delivery trucks and military transports.

Chrysler wasn't alone in its miseries. As the 1980s opened, domestic car sales were in the dumps — down to 6.6 million units from 9.3 million just two years earlier. Plagued by dragging sales, bad labor relations and a threadbare quality image in 1980, Ford was hemorrhaging red ink at a rate of almost $5 million a day. General Motors suffered its first full-year loss since the Great Depression. And if 1980 was abysmal, 1981 was worse, and 1982 was even uglier.

It was the decade of the Japanese. They expanded their share of the $700-billion-a-year U.S. automotive market and spurred the domestic makers into one of the greatest shifts in the nation's automotive history.

The end result was just barely palatable to Detroit. Between 1979 and 1989, the Japanese collectively increased their car market share from 16 percent to about 25 percent, and the decade was dominated by Detroit's response.

Sales by foreign carmakers in 1979 included a robust trade in Volkswagens from Germany and Pennsylvania of 2,450,000. By 1989, VW had stopped production in the United States.

Renault imports had ended. There were no more Fiats, no more MGs, no more Opels or Lancias coming to America, and still import sales topped 2.6 million.

GM's market share had been sheared by a fourth from its 46.4 percent command in 1979, while Ford and Chrysler wound up with small gains for the decade.

AUTOMOTIVE NEWS / CHRISTINE BEEVER

At the close of the 1970s, American auto workers numbered almost 1 million. North American factories produced 11.5 million cars and trucks a year. In three years, almost one-third of the nation's automotive workers had been laid off. By the end of the 1980s, more than a dozen U.S. car plants had been closed. The Big 3 had opened, closed, redesigned and reconfigured factories to the point that there were fewer plants producing cars more efficiently.

But at the same time, the Asian carmakers had invested $5.5 billion to open 13 gleaming, state-of-the-art factories in North America. In 1981, the group had no U.S. vehicle capacity. During 1989, the group collectively produced more than 1 million units.

In addition, Japanese parts sup-

Buick and Pontiac will use the 1990 auto show circuit to unveil new production and concept cars. From Buick is the redesigned Park Avenue Ultra, left, scheduled for both the Detroit and Los Angeles shows. Meanwhile, Pontiac will show off its Sunbird-based concept vehicle dubbed Sunfire to draw crowds in Detroit.

Detroit, L.A. ready for blockbuster auto shows

By Dutch Mandel
AUTOMOTIVE NEWS STAFF REPORTER

If an auto show's success is measured by new-vehicle introductions, increasing manufacturer participation and elaborate exhibits, then Detroit's second North American International Auto Show will be a hit.

More on show offerings, Pages 3, 15

But Detroit is not the only city ringing in the decade with an auto show. Covering Southern California's car-hungry market is the Greater Los Angeles Auto Show. Both shows are scheduled for Jan. 6-14.

Each event has its strength. Detroit's show, at the heart of the car-making business, has set its sights on international status and is close to the mark. Los Angeles' show, at the pulse of car-craziness, is an automotive trend barometer.

The shows are scheduled to have the same North American and world production-car debuts, with a few exceptions: Los Angeles gets the Ferrari 348 and Avanti four-door, while Detroit unveils the 1991 Aston Martin Virage.

Concept cars take center stage at each site. Detroit will have a new crop of show vehicles from each of the Big 3, as well as from a few American coachbuilders — cars and trucks said to rival last year's hot Dodge Viper, Chrysler Millennium and Ford Splash. Los Angeles scoops up many of last year's Detroit show stoppers and adds Porsche's 911-based Panamerica, which was featured at the Frankfurt show.

Along with the more than 45 production and concept vehicles debuting at Detroit are future technology exhibits — two-stroke engines from three manufacturers, safety displays and a first-of-its-kind demonstration of building a Buick

A showgoer's guide to some production and concept vehicles appearing at the Detroit show:

Alfa Romeo unveils for the world a redesigned 1991 two-seat Spider. Making its North American debut is Alfa's 164 sedan. Earlier this year Alfa Romeo teamed with specialty coachmaker Zagato to produce the Alfa SZ show car, slated to appear in Detroit only.

American coachbuilders **ASC** and **C&C** show their concept cars to the world at Detroit. ASC's Vision II has the same futuristic theme as its Vision I predecessor, while the C&C Intrigue showcases the firm's convertible hardtop technology.

One of the biggest unveilings for Detroit automakers is **Buick's** redesigned 1991 Park Avenue. The car carries sweeping, rounded lines that effectively bring it into the 1990s with a slippery 0.31 drag coefficient. It is powered by

Dealers like Olds rebates; results so-so

By Kathy Jackson and Arlena Sawyers
AUTOMOTIVE NEWS STAFF REPORTERS

While most of the cash offered in Oldsmobile's current dealer incentive program wound up in the customer's pocket, dealers say they like the program better than manufacturer-to-customer incentive programs.

Still, many dealers said Oldsmobile's "New Generation — Sell-A-Bration" program for dealers did little to increase either showroom traffic or gross profits. The program went into effect Thanksgiving Day and is scheduled to end Wednesday, Jan. 3.

"We like the flexibility of the money coming to the dealer," said Skip Cady, a sales manager for Jim Lupient Oldsmobile-Isuzu in Minneapolis. "When it goes to the customer, that's theirs first, and then they want to negotiate on the price of the car, too."

Said Don Mann, owner of Don Mann's Hansel and Ortman Cadillac-Oldsmobile-GMC Truck in Stockton, Calif.: "I think it's the best program General Motors or any manufacturer has come out with."

Mann was one of few Olds dealers surveyed who had a good fourth quarter. His Olds sales are

Chevrolet prepares 5 models for early-1990 introduction

By Jack Keebler
AUTOMOTIVE NEWS STAFF REPORTER

PHOENIX, Ariz. — The elves in Chevrolet's workshop worked overtime. The results are five new models for showroom introductions early this year.

They are the 1991 Camaro with freshened exterior styling, stretched four-door 1991 S-10 Blazer, 1991 Caprice and convertible versions of the 1990 Geo Metro and 1990 Beretta.

All five will debut at Detroit's North American International Auto Show and the Greater Los Angeles Auto Show, which run Jan. 6-14.

The Caprice is already in production and will reach showrooms by March. (See story, Page 28.)

The 1991 Camaro will also have a March introduction. Production of four-door 1991 Blazer starts this month for sale in March. The Metro convertible build also begins this month with the first units arriving at dealerships in late February. Chevrolet and C&C Inc. will roll Beretta convertibles out of the Wilmington, Del., plant early this month.

There are two Camaros this year: the RS and Z28. The Rally Sport RS version is the standard Camaro; Z28 is top of the line. The IROC badge was dropped because Chevy decided not to sponsor the International Race of Champions racing series.

The GM F-car program has been slow to come to a boil, so the old Camaro has been spruced up and will have to hold its own until the new car arrives. Camaro's changes include new front and rear fascia, "aero-styled" rocker panels and a new high-mounted stoplamp. The Z28 has new five-spoke light-alloy wheels, a taller rear-deck spoiler, fancy hood blisters and a red bowtie emblem on the grille. Stylists have removed the Z28's lower stripes and decals. An important upgrade was made to the car's acoustical blanket.

The standard powerplant in the RS is the 3.1-liter V-6 mated to a five-speed manual transmission. A four-speed automatic is optional. RS coupes can also be equipped with a 5-liter V-8 for the first time. The V-8 is the standard engine in the RS convertible.

Chevrolet's 1991 Camaro will hit the stores in March.

Standard Z28 power is provided by a 5-liter V-8 and a five-speed manual. A four-speed automatic is optional. For Z28 buyers who select the 5.7-liter V-8, an automatic is the only transmission available.

All Camaros offer a driver-side air bag and a resistor-key anti-theft system. There are two new exterior colors — arctic white

Commerce sees auto rise after 1990 dip

By Diana T. Kuryiko
AUTOMOTIVE NEWS STAFF REPORTER

WASHINGTON — If the Department of Commerce is right, automotive sales will improve after 1990.

In its annual outlook for 350 industries, the Commerce Department said last week that new-vehicle sales will dip 1.3 percent this year. But the report said sales will rebound in 1991, top 15 million in 1992 and hit 15.6 million in 1994.

Despite the rosy sales outlook, the department said intense competition will likely require additional restructuring of the domestic auto companies, similar to what the Big 3 underwent in the early 1980s.

The auto industry as a whole can expect to grow as long as the economy expands, the government said.

As for this year, the Commerce Department said total car sales will decline less than 1 percent, or 85,000 units, from a projected 9,975,000 in 1989. Truck sales — including medium- and heavy-duty models — will take a bigger hit. They're expected to drop 2.3 percent to about 4.9 million.

Total vehicle sales in 1990 will reach 14,788,000 units, down from a projected 14,988,000 in 1989.

U.S. DEPT. OF COMMERCE SALES PROJECTIONS
(figures in thousands of units)

	1989	1990	1991	1992	1993	1994
Cars	9,975	9,890	10,020	10,200	10,335	10,445
Trucks	5,013	4,898	4,957	5,063	5,131	5,189
Total	14,988	14,788	14,977	15,263	15,466	15,634

But auto parts sales will rise 1.4 percent because of increased domestic sourcing by Japanese transplants, an aging vehicle fleet and increased exports, Commerce said.

Between 1989 and 1994, sales of domestically produced vehicles will increase by nearly 500,000 units, the report said. But the Big 3 will make fewer cars and lose market share to the transplants, the Commerce Department said. The competition from the Japanese also will continue to increase, especially in luxury and intermediate markets.

"This trend, combined with growing North American overcapacity, will lead to some plant closures and accompanying regional unemployment problems during the early and mid-1990s," Commerce said. It anticipates employment will decline primarily through attrition but does not rule out layoffs and transfers.

"The increasing competitive environment facing the industry will continue to exert pressure on firms to cut costs, improve quality and identify and exploit market niches," the study said.

Imports of passenger cars will remain fairly steady during the period because of currency realignments and increased transplant production, the Commerce Department said.

It attributed its forecast of improved sales after 1990 to new product offerings and new vehicle manufacturers.

U.S. sales of North American-built passenger cars in 1990 will drop to 7.09 million from 7.16 million forecast for 1989. Japanese imports will increase to 2 million from 1.94 million in 1989. But overall imports will decline to 2.80 million in 1990 from 2.81 million in 1989, the Commerce Department said.

Currency fluctuations have narrowed the price gap between domestic and import vehicles but have taken a toll on European luxury cars, whose sales fell 13 percent in 1989, the study said.

The lower dollar has also lured Japanese automakers to produce in the United States. But without a further decline in the dollar, U.S. auto manufacturers may have difficulty sustaining the kind of export growth that followed earlier shifts in currency values, the study said.

Overall, the Commerce Department sees continued but slower growth for the vast majority of industries, both manufacturing and service.

Gloomy Iacocca predicts tougher year for industry

By Kathy Jackson
AUTOMOTIVE NEWS STAFF REPORTER

Lee Iacocca, stung by Chrysler Corp.'s loss of car market share in 1989, predicts that "1990 is going to be even tougher, maybe the toughest year the industry has faced in a decade."

In a year-end statement, the Chrysler chairman projects that sales will total 14.5 million cars and trucks this year, down from about 14.9 million in 1989. He said sales could drop even lower if incentives don't entice consumers.

The last time sales dipped below 14.5 million was in 1984, when car and truck sales totaled about 14.4 million.

AUTOMOTIVE NEWS/JOE WILSSENS

> "1990 will be toughest year the industry has faced in a decade."
> Lee Iacocca

Auto analyst David Pulaski agrees that the new year will be tough, but he doesn't see Chrysler threatened, as it was when it entered the 1980s.

Pulaski, director of the automotive group at Abt Associates in Torrance, Calif., said Chrysler's strong base of business and its strong distribution system still put the company's car and truck sales "well beyond any of the individual importers, which are perceived as very good."

Chrysler sold approximately 2 million trucks and cars in 1989. That was about 13.5 percent of the domestic car and truck market, down from 14.3 percent of the market in 1988. Chrysler slid from an 11.3 percent share of car sales in 1988 to 10.5 percent last year.

Strong sales of Jeeps and minivans last year allowed Chrysler to maintain the 19.3 percent share of the light-truck market it enjoyed in 1988. Iacocca said Chrysler sold about 977,000 light trucks in 1989, down 4 percent from 1988.

Despite the declines, Iacocca vowed, "Our product programs will continue into the 1990s with a record $15 billion committed to bring additional world-class cars and trucks to the market."

BMW's Wolfgang Reitzle says his creative staff invents "new things every day and every hour."

Reitzle, BMW's r&d boss, expects a long, bitter battle with Japanese

By Richard Johnson
AUTOMOTIVE NEWS STAFF REPORTER

MUNICH, West Germany — Wolfgang Reitzle has already crammed a life's work into the 1980s, but he seems likely to be a conspicuous auto industry leader long after the turn of the century.

And if events unfold as BMW's research and development chief expects, he'll spend the rest of this century and part of the next in a life-or-death struggle with Japanese carmakers.

Given the impact Reitzle has made before age 40 and his bright prospects (not to mention good looks and stylish dress), it's easy to understand why European lifestyle magazines clamor to feature him.

Ten years and one month after joining BMW AG as a production specialist out of Munich Technical University, Reitzle was appointed a deputy member of the BMW board of management in charge of product development — at age 36.

That was in 1986, when industry observers were wondering what BMW — having virtually created the sport sedan segment and watched others leap in — would do next. Reitzle, now a full board

see REITZLE, page 29

MARQUES

Importers leave an indelible mark

A decade ago, it was easy to tell the difference between an import and a domestic automobile. Today, it's hard to keep track without a scorecard.

In 1979, 31 import marques were doing business in the United States — eight Japanese and 23 European. Today's total is 33, but the makeup has changed.

British mainstays MG and Triumph left the scene. A stainless steel sports car called DeLorean came and went, too. Later, Italian giant Fiat called it quits; so did Lancia.

By then, Isuzu had arrived. It was later joined by Acura, Yugo, Hyundai, Sterling Suzuki, Daihatsu, Lexus and Infiniti.

Renault's pipeline to the United States was closed after Chrysler Corp. bought American Motors, which was partly owned by Renault.

That venture aside, the Big 3 automakers have done their part to complicate matters.

Chevrolet sells a line called Geo, which is made up of Suzukis, Isuzus and Toyotas.

The Pontiac LeMans — originally a 1960s-era muscle car — is now a sedate subcompact. It is based on GM of Europe's Opel, built by Daewoo in Korea and sold in the United States.

Throughout the decade, Ford took a few stabs at establishing some of its European products in the U.S. market. But the Fiesta and more recently the Merkur XR4Ti and Scorpio have been abandoned.

Now Ford sells Festivas that are engineered by Mazda and built by Kia Motors of Korea.

It also sells Probes that were engineered by Mazda and are built by Mazda in Michigan.

In an apparent reciprocal move, Ford plans to provide a version of its new two-door Explorer sport-utility to Mazda dealers.

From a simple importer of Mitsubishi products early in the decade, Chrysler now builds a line of Mitsubishi sports cars with its Japanese partner in Illinois.

The Diamond-Star Motors venture supplies Plymouth, Eagle and Mitsubishi showrooms with sport coupes and will soon be providing the Eagle and Mitsubishi franchises with a compact sedan.

— Philly Murtha

1980

Oldsmobile Cutlass Supreme leads the industry as its sales reach 469,573 units.

Chevrolet Chevette, with 373,988 sales, dips to the No. 2 spot from No. 1 the year before.

DECADE

FROM PAGE 1

pliers grew from fewer than 30 U.S. factories in 1985 to almost 300 by 1988 to help increase their customers' domestic-content levels. Domestic carmakers themselves now rely on those transplant parts makers for an increasing number of components, and the Made-In-USA label has quotation marks around it.

The battle cry of the early 1980s was simply "Buy American." Manufacturers and union officials beseeched Congress to slam the door on imports to protect U.S. jobs. Ford and the UAW even joined forces to demand that the U.S. International Trade Commission place strict limits on import volume.

Consumers paid little heed, and the government chided Detroit for failing to anticipate changing consumer tastes.

In 1981, concerned that a Chrysler collapse could put another 75,000 Americans on the street, the Reagan administration persuaded the Japanese carmakers, under the direction of the powerful Japanese Ministry of International Trade and Industry, to voluntarily limit their car exports to the United States. The voluntary restraint agreements lasted throughout the decade, but in 1981, in the pit of hard times, it was clear that Detroit would have to devise a better plan.

When the 1980s began, all of the Big 3 were pushing new small lines they called import-fighters. GM had just introduced its high-fuel-efficiency Chevette. Ford was hawking its small Escort as a "world car." And Chrysler had its Omni/Horizon. But the strategy changed in the 1980s. Chrysler, GM and Ford seemed to simultaneously concede that their forte was large, American-style cars. Henceforth, they would obtain cars ready-made from their more cost-efficient competitors, the Asians.

All three had had the strategic foresight to buy chunks of their competitors in earlier years. Ford now turned to its Korean investment, Kia Motors, for its low-end Festiva and handed over to Mazda responsibility for developing its small cars.

GM dropped the Chevette and turned to Isuzu, Suzuki and Toyota for a trio of subcompacts now sold under the Geo banner. It charted a plan to build a new import-fighter, the Saturn, and bought the Pontiac LeMans from Korea's Daewoo Motor Co., of which GM owned 50 percent. From Mitsubishi, Chrysler would receive the Colt, the Conquest, the Dodge Raider pickup and the U.S.-built Laser/Talon sports cars.

As the decade developed, each of the Big 3 embarked on a new four-pronged strategy. The U.S. industry would survive the 1980s by cutting costs, streamlining, retooling and diversifying. Beyond that, each company made a new commitment to improve product quality, from componentry to vehicle design to retail sales programs.

A summary of their activities follows:

Chrysler Corp.

Recharging Chrysler required a combination of the federal loan guarantees and Chairman Iacocca's charisma. A latter-day Harry Truman, complete with rumors of political aspirations, Iacocca took to prime time TV to assure America that Dodge, Plymouth and company were OK. Buying Chrysler products, he inferred in a straight-talking ad campaign, was even the patriotic thing to do.

Never mind that Chrysler was selling Japanese and Canadian vehicles at the time. And never mind that Chrysler owned a good chunk of one of those upstart Japanese automakers, Mitsubishi.

As part of Chrysler's deal with Congress, the company was forced to reduce operating costs by the amount it wished to borrow. Iacocca, whose vow to sacrifice his own salary helped make him a hero of the lecture circuit, asked the UAW for concessions. The union stunned the industry, and some of its own membership, by agreeing to wage and benefit cuts totaling $622 million. The news was not lost on Ford and GM, who by 1983 would ask for and receive a combined $3.5 billion in union concessions.

Chrysler's next strategy was simply to increase sales. Its ballyhooed new K-car line was slowing down and little else of promise was in the showrooms. Step one involved clearing out a Windsor, Ontario, factory where large rear-wheel-drive cars were in production, gutting the building and tooling up to produce a van. Or more precisely, a front-wheel-drive, user-friendly minivan. Some scoffed, but when the new product appeared in 1983, its success washed the company with profits and inspired a whole market segment.

Like its competitors, Chrysler spent its way out of trouble. Between 1981 and 1984, it put $2 billion into new products. By 1984, it had the Caravan/Voyager minivans and a newly styled K-car product, the LeBaron. Seven of its 12 North American plants were retooled and two others were closed. The payoff was immediate.

During its travails, the company sold its defense contracting division, General Dynamics, to raise $1 billion. In 1985, it launched a diversification plan that built an en-

PRODUCT:

Consumers switched from mpg to hp, and sales of car-like trucks burgeoned

Fuel-sipping subcompacts were hot at the start of the decade, and performance flourished near the end.

Along the way, it became a lot harder to tell a car from a truck.

"That's the story of the '80s," said Joel Pitcoff, manager of research and analysis at Ford Motor Co. "You can divide the universe up into cars and trucks and talk about success stories in one or the other, but any view of the '80s has to center around cars vs. trucks."

Annual light-truck sales went from about 2.5 million in 1980 to twice that in 1989. The surge was led by consumers who stepped out of passenger cars into minivans and small sport-utility vehicles.

From 1980 to 1989, minivans went from 0.5 percent to 16.5 percent of the truck market, with nearly all that growth from 1984 onward. Compact sport-utilities jumped from 2.2 percent to 14.4 percent in the same period.

Within the passenger car segment, gas shortages and recession ushered in the '80s with a flood of cheap, fuel-efficient subcompacts — a segment dominated by Japanese imports.

In 1980, subcompacts accounted for about 26.8 percent of car sales and hit a peak of 29.4 percent in 1981, according to Ford figures. The average cost of a gallon of gas, which peaked at $1.22 a gallon, concerned consumers.

But gas got cheaper, tastes changed, the dollar lost strength and econoboxes fell out of fashion. By 1989 subcompacts accounted for about one of every five car sales.

Compact pickups followed much the same pattern, growing from 20.6 percent of the light truck market in 1980 to about 30 percent in 1982. By the end of 1989, that figure will be down to about 23.9 percent.

Compact cars, on the other hand, have grown from about 18 percent of the car market in 1980 to nearly 28 percent in 1989.

Luxury cars also enjoyed strong growth, from 5.7 percent of the car market in 1980 to about 8.9 percent in 1989.

Demand for performance returned — sometimes at the expense of gas mileage, but not always.

— Jim Henry

1982

Slick little Ford Escort, which is to figure strongly in the decade's sales, moves into the top spot with a tally of 337,667 units.

Olds Cutlass Supreme is strong, but dips to second place as sales total 280,566 units.

	Car Sales	% of Market

tire new aerospace division around the acquisition of aircraft manufacturer Gulfstream Aerospace. But after acquiring No. 4 carmaker American Motors in 1987 for an estimated $2 billion, Chrysler put the aerospace properties on the block to raise new money for 1990s product development.

Buying AMC gave Chrysler a new cash cow, the Jeep line. The company also acquired Italy's Lamborghini in 1987 and bought an interest in Maserati that would give Chrysler dealers an Italian luxury sports car. Arrangements were also made to sell Alfa Romeos through the Chrysler-Plymouth dealer network. For a short time, it even looked as if Chrysler might form an alliance with Fiat Auto. But in all cases, Chrysler's European overtures seemed to lead nowhere.

General Motors

GM made no bones about seeing the light, even dubbing its plan "The Japan Strategy." In 1981, it acquired 5 percent of a struggling little car company called Suzuki and boosted its stake in Isuzu from 34 to 40 percent.

Labor costs in Japanese factories were $10 to $12 an hour less than in North America. Detroit could no longer compete against such disparity on small, low-margin products. Let Asia produce America's inexpensive cars, Detroit seemed to agree. Cadillac would always be Cadillac, and the Japanese would never aspire to building luxury cars, the industry assured itself.

A new management team had taken over at GM in January 1981, led by Roger Smith as chairman. The corporation immediately began reorganizing its mammoth structure in an effort to rekindle some of the old-fashioned traits that the Japanese were now getting all the credit for — like quality awareness, personal responsibility and pride of craftsmanship.

Smith merged all truck, bus and van operations worldwide, from design to sales, into a single truck entity. Engineering and manufacturing were brought together in Europe and South America. Component divisions were restructured and, finally, in 1984, the company's passenger car operations were grouped into two spheres, Buick-Oldsmobile-Cadillac and Chevrolet-Pontiac-Canada.

Rather than merely forking over small-car production to its Asian competitors, GM exacted a payback. It wanted access to the Asians' technology and systems. It enlisted Toyota in a joint venture to produce cars in the United States. Using a mothballed plant in Fremont, Calif., where labor strife had been the byword a few years before, New United Motor Manufacturing Inc. was launched to build Toyota Corollas and Chevy Novas side by side.

The move gave Toyota a chance to build its first U.S. cars, under the protective gaze of GM. For GM, the experiment would serve as a sort of zen garden, an operation where Old World GM managers could "get religion" in the new ways of carmaking. The lessons were eventually applied to GM operations in the United States as well as Europe.

By 1989, GM opened its second joint-venture car plant, CAMI Automotive Inc., in Ingersoll, Ontario, to produce 200,000 vehicles a year with Suzuki.

GM also embarked on a gutsy diversification strategy that bore its share of controversy. GM created GMFanuc Robotics Corp. in 1982, a venture that became North America's largest supplier of factory-floor robots within five years. In 1984, it spent $1 billion and 11 million shares of stock to acquire the Texas computer company, Electronic Data Systems Corp. In that transaction, it inherited EDS' founder Ross Perot as a board member.

The following year, GM spent another $5 billion to acquire Hughes Aircraft Co., a move intended both to diversify the company and infuse it with some new space-age technology. But the spending drew questions from Perot and alerted Wall Street and the public that an open rift was developing in GM's boardroom.

The general gameplan was "reindustrialization." GM spent almost $70 billion to open nine new factories and modernize 19 assembly plants and 12 stamping facilities. Automation from GMFanuc and EDS was woven through the organization. In 1985, the most attention-getting investment of all — GM announced that its $6 billion Saturn project would be built in Spring Hill, Tenn.

Smith called Saturn the answer to the Japanese. From a greenfield site, Saturn would use state-of-the-art technology to produce a low-priced, high-performing, sleekly designed family car that would bring Americans back home to American products. The operation would work closely with labor "partners" to adopt the best of the Japanese management system, as practiced at NUMMI.

The plant would build its own engines and transmissions, just as Honda of America Manufacturing was planning to do in Ohio. It would stamp its own chassis parts, just like Nissan Motors Manufacturing's 3-year-old plant down the road in Smyrna, Tenn. And like the workers at Japanese plants, GM reasoned, Saturn line workers would strive for excellence — not because they were being paid to do

LABOR

UAW endures a 'down' decade

The UAW observed its golden anniversary in 1985, but there wasn't much jubilation for the union that year or throughout the 1980s.

The decade began with the union banning foreign automobiles from the parking lot at its Detroit headquarters and the Big 3 getting millions in concessions from its workers.

But as the automakers returned to profitability, some workers still saw their plants closed or idled due to slow sales.

The number of workers in Big 3 plants declined from about 800,000 at the beginning of the decade to about 500,000 today.

"The erosion of the domestic auto industry" was the biggest factor affecting the union in the 1980s, said Douglas Fraser, former UAW president, who retired in 1983.

During the UAW's golden anniversary year, Chrysler workers struck for 12 days, seeking wage parity with workers at General Motors and Ford Motor Co.

Also in 1985, the Canadian section of the UAW jumped ship, taking along 120,000 members, or about 11 percent of the union's 1.1 million members.

In the 1987 negotiations, Ford and GM settled without a strike as union and management hailed groundbreaking job-security provisions. But the issue apparently isn't settled. Job security promises to be a big issue in this year's auto contract talks.

While Big 3 plants have been idled, Japanese transplants continue to run at full tilt with a work force that is primarily non-union.

And at Mazda Motor Manufacturing (U.S.A.) Corp.'s plant in Michigan — the only wholly owned Japanese transplant represented by the UAW — dissidents became much more visible and won key positions amid accusations of high worker injury rates.

The GM-Toyota joint-venture in Fremont, Calif., provided a bright spot for the union. The plant, once a seat of union unrest, turned out high-quality products and served as an example for those who believe labor-management cooperation will be necessary for survival in the 1990s.

— Kathy Jackson

CAPACITY: *Asians arrived as the Big 3 receded, and there were still too many plants*

The effects of vigorous industry competition were nowhere more visible in the 1980s than in the efforts to cope with factory overcapacity.

When the 1970s ended, North American plants were turning out 13 million cars and trucks annually. Four miserable years later, factory output had been cut in half. By 1989, 13 assembly plants had been closed and capacity for 1.5 million units eliminated.

Further complicating the issue was the fact that while Detroit was boarding up facilities, Asian makers were taking steps that would see the opening of 13 new North American plants between 1982 and 1989. They were capable of turning out 2.3 million units a year.

Big 3 makers, particularly General Motors, did open some new plants during the time.

Others, like Ford, have tried to improve efficiency by squeezing more production out of existing plants.

The Big 3 made up for some capacity loss by having overseas plants build certain cars. The Pontiac LeMans, Geo Storm, Ford Festiva and Dodge Colt, for example, were produced in Asia for the Big 3.

By the end of the decade, the Big 3 were getting more than 600,000 vehicles a year from overseas plants and North American transplant and joint-venture factories.

Capacity reductions are far from over, however.

GM is faced with the prospect of closing six of its older factories, and Chrysler one.

During 1989, the Big 3 built 11.6 million cars and trucks in North America. Transplant operations built another 1 million. Those same plants could have built 770,000 more vehicles. By 1992, still another 900,000 units of capacity will come on stream — most of them from Japanese operations.

As for the factories themselves, the arrival of robotics, workerless stamping presses and computerized production has dramatically changed the way vehicles are built.

Engineers point out that plant technology has changed faster in the past eight to 10 years than it did in the previous 50.

— Lindsay Chappell

DECADE IN REVIEW

Hits of the decade

- **Chrysler's purchase of AMC:** The company got a real gem — Jeep
- **Donald E. Petersen:** He was "Don *who*?" when he became Ford chairman; not any more
- **Transplants:** They build the best vehicles on these shores, overcrowding the market and forcing U.S. automakers to shutter their plants
- **Malcolm Bricklin:** He imported the lowest-priced car in the United States, then escaped from the Yugo mess with $20 million
- **Ford Escort:** Old, stodgy and cheap, but the best-selling car in the United States
- **Anti-lock brakes:** A leap forward in active safety
- **Fuel injection:** Made low emissions possible
- **Convertibles:** Hurrah for their resurgence in the 1980s
- **Computer-aided design:** Aided engineering communication
- **Independent rear suspension:** Smoother ride, better handling
- **Front-wheel drive:** Good traction; low cost to carmakers
- **Aerodynamic improvements:** In styling and function
- **MacPherson strut:** Cheap, simple suspension system that made unibody front-wheel-drive cars possible
- **Lexus/Infiniti:** Forced European luxury makers to reassess U.S. strategy
- ***Roger & Me:*** Critical acclaim, could be headed for an Oscar
- **Honda of America:** Honda has quickly become the No. 1 transplant in the United States; Accord was one of the top-selling cars in the 1989 model year
- ***Iacocca:*** Chairman Lee's best-selling autobiography
- **Mazda Miata:** Mix a classic design in a contemporary package and watch the hearts of aging baby-boomers melt
- **Pickup trucks:** Top performer in the light-truck segment, which accounts for one-third of new-vehicle sales in the United States
- **North American International Auto Show:** After just its first year, Detroit show is considered by some makers to be equal to the best around the world
- **Center high-mounted stoplamps:** They do work no matter how E.T.-like the first generation were
- **Corvette ZR-1:** Expensive, totally sold out in advance, immediate hit with collectors
- **Luxury segment:** Sales of prestige cars bulged in the middle of the decade as Yuppies discovered BMW, Porsche, Jaguar and Mercedes-Benz
- **Ford's financial turnaround:** Cost-cutting measures and a commitment to quality products really paid off
- **Ford's mid-1980s products.** Taurus and Sable — an instant success; kept traditional Mustang while offering the Probe, a great "transplant" front-wheel-drive sport coupe
- **Chrysler Corp.:** It's still around, as are its minivan, K-car and Omni/Horizon
- **Chrysler minivan:** Chrysler saw a need and filled it admirably
- **Mike Losh:** Built excitement at Pontiac; what will he do for Oldsmobile?

1986

Chevy beats Ford one more time as Celebrity outsells Escort, 408,946 to 402,181.

so but because they would have a pride of participation.

Things started to go wrong in 1986. Rising sticker prices suddenly chilled the auto comeback that had been in progress since 1983. GM lost market share to Ford and the Japanese. To make up for the lost ground, the company sold a major interest in its heavy truck business to Volvo and a major interest in its diesel engine business to Penske Group. It also cut Smith's pet Saturn project in half. But silencing Perot's internal criticism of GM's spending proved the bitterest pill of all. In order to remove Perot from the board of directors, GM shocked Wall Street by spending nearly $750 million to buy Perot and his top aides out of their GM role.

Ford Motor Co.

Both GM and Ford benefited from moving deeper into financial services during the 1980s. By 1988, almost a fifth of Ford's earnings came from its financial services operations. A conglomerate of financial holdings including Ford Credit and the newly acquired First Nationwide Bank was proving so lucrative that the company found it necessary to assure shareholders in 1988 that it would remain in the car business.

Ford had lost $2 billion from 1980 to 1982 and laid off 70,000 employees. But the company's performance demonstrates the essential lesson of the decade. In 1979, Ford had some 244,000 employees and sold 3.2 million vehicles in the United States. In 1988, it had 185,000 employees and sold 3.8 million vehicles. An additional 600,000 vehicles were built using three fewer plants. In fact, since 1985, Ford's North American capacity has increased by 1 million units but only one new plant has been added — the Hermosillo, Mexico, facility in 1986.

Factory automation played a key role. Obtaining products from outside plants was another. In addition to vehicles from Japan and Korea, Ford arranged for its affiliate company, Mazda Motor Corp., to supply the sporty Probe from a plant in Flat Rock, Mich., in 1987.

Increased plant productivity and improved employee-management relations played still another part. The company resisted new plant investments by running plants overtime. By the time auto production started to peak in 1987, Ford was building cars at more than 100 percent of capacity. Like GM and Chrysler, Ford also undertook a massive worker training program during the decade that involved teaching statistical process control to line workers at every plant in the system, offering adult literacy classes and giving new decision-making powers to workers.

A new line of products didn't hurt, either. The company increased its market share from 1983 to 1989 with new aerodynamic "jellybean" designs such as the Taurus/Sable while the Escort provided a decade of reliable sales.

By the late 1980s, Ford had amassed a corporate war chest of some $10 billion in cash, which it wanted to spend on global acquisitions. In 1989 Ford outmaneuvered GM in taking over Britain's Jaguar. Talks with Saab-Scania in Sweden fell through, leaving the door open for a last-minute GM-Saab arrangement.

It was clear that both GM and Ford were positioning themselves for the new opportunities expected in Europe in the next three years. The new alliances also gave them a foothold in the upscale vehicle segment where increasing competition loomed.

The crossfire of global competition mostly benefited the consumer. Although prices rose, product developments proliferated during the decade.

After the recession, consumers were offered convertibles in a quantity they hadn't seen since the 1960s. Jeep's long-lasting success had inspired a host of competitors.

Gasoline prices dipped; speed limits crept back up to 65 mph on some freeways; drivers crept back up to 75; and a new romance blossomed in bigger engines and sportier rides.

With fuel prices down and a new era of spending at hand, larger cars became popular once again. No longer were Japanese car companies confined to small, cramped vehicles. By 1989, Honda was selling a Civic model that was as large as its big brother Accord had been in 1981. Even Hyundai, an ambitious Korean manufacturer that sought to displace the Japanese as a key source of small economy cars in the mid-1980s, introduced a family sedan, the Sonata.

Headroom inched upward and so did horsepower. Fuel-injected engines became standard on most

HITS: *Taurus, minivans, Accord lead "Hall of Fame" list*

If there were a 1980s Hall of Fame, the Ford Taurus and Chrysler minivans would be near the top of most ballots.

They certainly rank among the most memorable vehicles of the decade in terms of styling, sales volume and importance to the companies that conceived them.

The Honda Accord is another milestone — and not just because it was the first Japanese car built in the United States.

Four generations of Accords were on sale at one point or another during the decade, a dramatic reminder of Japan's ever-shrinking product development cycles.

Although it hasn't been tested by time, Mazda's new Miata also appears destined to be remembered.

Strictly in terms of sales, the functional Ford Escort was the home-run car of the 1980s. More than 3.2 million were sold in the United States since 1980.

A competitor for volume has been the Chevrolet Cavalier, 2.5 million of which have been sold since 1980. Chevy also sold more than 1.9 million Celebrities.

Chrysler blurred the distinction between cars and trucks with the 1983 introduction of its minivans. By the end of 1988, the Dodge Caravan and Plymouth Voyager held 55.6 percent of the minivan market against a growing list of imitators.

Ford's Taurus and its Mercury Sable twin helped lead Ford to dizzying success after their 1985 launch.

Critics initially called Ford's rounded creations "jellybeans." Jack Telnack, Ford's vice president of design, recently defended the look from a practical sense — as a means to improve gas mileage — and from an aesthetic standpoint.

"People say that the aero look will cause all cars to look alike, but that's not true any more than that all birds look alike," said Telnack.

— Jim Henry

TECHNOLOGY: *A little star steals show*

The computer chip revolutionized automotive technology in the 1980s. It allowed cars to stop faster, accelerate more quickly, burn less fuel, produce fewer pollutants and ride more smoothly.

The introduction of microprocessor-driven electronic engine control systems served as the entre to electronic fuel injection systems, which increased power and cut emissions.

By 1988, 88 percent of all cars built in the United States were equipped with electronic fuel injection systems compared with only a handful at the start of the decade.

Electronic engine control systems and fuel injection allowed emissions and performance to be controlled over the full range of engine conditions — speed, load, atmospheric conditions — to an extent not possible with the previous mechanical systems.

Advancements in microprocessors created the opportunity for a compact, reliable and affordable braking system that can increase the margin of safety under many driving conditions.

Antilock braking systems have become the norm on luxury cars and are now finding their way to mid-priced cars and many pickup trucks.

Using similar technology, automakers and suppliers are now developing systems that control traction when accelerating and cornering.

In the 1980s, electronically controlled suspension systems — the precursors to active suspension — came into vogue, and were used on such cars as the Lincoln Continental and Mitsubishi Galant.

Other automotive products which came about as a result of the revolution in electronic technology include electronically controlled transmissions, variable valve timing systems, digital dashboards and heads-up displays, improved stereo systems, and even aerodynamic devices that adjust according to speed.

imported cars, all Fords and numerous pickup trucks. Average vehicle weight was reduced, and fuel efficiency — spurred by federal standards — improved.

Expensive was chic in the 1980s. By the time the nation's spending binge was in full progress in 1986, Mercedes-Benz sales had nearly doubled. BMW sales had doubled. Sales of Scandanavian Saabs tripled. Jaguar's U.S. sales doubled once, twice and then a third time by 1986.

But then world markets pulled the plug on the dollar. The stock market crash of October 1987 put a chill on big-ticket spending. For the next two years, European carmakers would watch U.S. sales slip away. A Mercedes 300E had sold for $35,800 in 1985. Two years later, it sold for $43,400. The change in currency values also pressured the Japanese to raise sticker prices.

But by 1989, Toyota and Nissan had been emboldened to follow Honda into the high-margin luxury market, the bastion, until now, of a handful of European carmakers. Honda's Acura Division had been readily accepted by buyers in the $20,000-plus range. Toyota's new Lexus line would ask luxury shoppers to spend $35,000. Nissan followed suit with its Infiniti line.

The currency change of the late 1980s didn't seem to benefit the Big 3 as expected. Rather than seizing the opportunity to win back the market, domestic manufacturers increased prices in step with the importers. Industry car sales actually fell in 1987, constituting what analysts called a "mini-recession." But volume was back up the following year, and car sales managed to stay above 10 million units annually every year after 1983. Turmoil aside, all three U.S. carmakers experienced record profits in the late 1980s.

It helped that auto loan interest rates fell steadily through the decade from their double-digit highs. As 1985 ended, GM and Ford were publicly wondering whether rates might go as low as 7.9 percent. By 1988, to keep buyers interested and keep the sales boom going, they were offering 2.2 percent deals and Chrysler was attracting consumers with zero-percent lending.

By 1989, though, the cycle was visibly turning down and a 5 percent sales drop from 1988 looked likely. The population of cars and trucks on the streets in America had increased by more than 50 million between 1989 and 1979. The U.S. car business was growing more and more competitive. New North American factories meant expensive industry overcapacity at a time when carmakers in the United States, Japan and Europe were agreeing that 1990 looked bad.

Analysts prophesied that more North American plants would have to close. Others warned that the industry was constricting and that new mergers, takeovers and business failures loomed. As sales slowed in 1989, production was scaled back at a number of Big 3 plants. And as the decade drew to a close, the memory of its painful beginnings seemed as fresh as ever.

The 1990s may be the true test of the lessons of the 1980s. Carmakers have spent heavily during the past eight years to trim operational fat and improve product quality. Better relations have developed between labor and management. New income sources have been created, new products developed and new global business links formed that could ease the impact of future sales slumps in any given market.

But at the same time, the competition for the lucrative U.S. market is greater than it was 10 years ago. Pressures will mount for the development of new factories to replace aging facilities. New technology will have to be developed to replace older componentry, an area in which Japanese carmakers are now taking an aggressive lead.

The new regulations that are expected from the Bush administration on fuel economy, emissions control and product safety will be another test for the industry in the next few years.

The globalization of the industry remains a central force for the 1990s. Larger companies will have greater resources to compete in individual markets.

As global penetration becomes increasingly necessary for survival, success will depend more heavily on access to capital. New plants will be necessary to address new concerns over domestic content. New investments in technology will become more and more expensive. Such high-stakes competition will require both deep pockets and healthy partners to share the costs.

The industry spent the 1980s learning this lesson. It enters the 1990s living it.

ENGINEERING: *The fittest survive*

As auto engineers squint at the last 10 years and reflect on the changes that have taken place, one important thing becomes clear: Time is the enemy.

With more competitors in the arena, automakers have to keep pace to survive. The 1980s have triggered some important new weapons, such as supplier partners, simultaneous engineering and computer-aided design.

Probably the most important change was the passing of increased levels of engineering responsibility to outside suppliers. They are now brought in as early as four years before product introduction, requiring unprecedented levels of coordination, cooperation and trust.

"Commitments must become sacred," said a Ford Motor Co. engineer. "The Japanese do it. And we must do it, to survive."

The move toward simultaneous engineering has fostered constant communication between design, engineering, supplier and manufacturing groups.

They are brought together at the beginning of the process with the goal of getting projects done as quickly and economically as possible.

Terry Quattro, chief engineer on the Chevrolet Caprice, said that simultaneous engineering kept costs low and speeded the redesign of the division's flagship sedan.

Computer-aided design helps engineers examine many more design possibilities by using a computer's muscle to quickly sort through and illuminate the best solutions to engineering problems.

It also enhances communication by enabling different engineering groups to interface on a single piece of microprocessor-based equipment.

These systems increase productivity by speeding production flow and scheduling, and by providing greater flexibility in modifying machining operations.

— Jack Keebler

DEALERS: *Fewer outlets, CSI, computers, Tonkin*

New-car dealers generally prospered in the 1980s as sales of cars and trucks set records despite a 10 percent decline in the number of dealerships.

There were 27,891 dealerships in 1980 and 25,105 last year. The number of dealer principals fell even more sharply, from 25,100 in 1979 to 17,800 as a wave of consolidations hit the automotive retail business.

For a while, megadealers were all the rage as dealers rushed to acquire additional stores and franchises.

But some megadealers — like the 10-dealership Pepe chain in New Jersey, Jim Johnson Chevrolet in Texas and Grand Chevrolet in California — ended up in bankruptcy.

There was also a lot of hoopla — and little action — over the prospect of public ownership of dealerships. When it came right down to it, dealers preferred limited partnerships or other means to finance acquisitions.

Dealer-manufacturer relations came under the harsh glare of public scrutiny with the election of Ron Tonkin as president of the National Automobile Dealers Association for the 1989-90 term.

Tonkin said what was on most dealers' minds and in confrontational terms. He railed against automakers on such volatile issues as dealer advertising councils, fleet subsidies, retail incentives and elimination of carryover allowances.

The dealership itself changed dramatically with the introduction of computers in every phase of the operation, from the finance and insurance department to parts and service, where even the parts catalog has been computerized.

By the end of the decade, unprecedented attention was focused on another aspect of dealer-factory communication. Dealers and makers alike sought to gain a competitive edge by improving customer satisfaction programs at the dealership.

— Charles M. Thomas

Misses of the decade

- **Chrysler's purchase of AMC:** Chrysler got tons of capacity it didn't need, which is causing a furor as it closes plants
- **VW's transplant operation:** All other transplants going like gang-busters, VW bails out of U.S. manufacturing
- **Chevrolet's descent:** To second-place in new-car sales after about a half century of almost uninterrupted leadership
- **Saturn:** Announced in 1982 and still hasn't showed up
- **Public ownership of U.S. auto dealerships:** Heard much about it lately?
- **All-wheel drive:** Doesn't offer many more advantages then front-wheel drive
- **Four-wheel steer:** Low consumer interest, high cost
- **GM Quad-4 engine:** High vibration, poor low-end torque
- **Digital dashboards:** Hard to read and cheap looking
- **Pontiac Fiero:** Good car killed by poor planning
- **John Z. DeLorean:** His sports-car dream folds, and he becomes better known as a defendant (albeit successful) in lawsuits than as the automotive wunderkind of the 1960s and early 1970s
- **DeLorean Motor Co.:** Bankruptcy proceedings began in October 1982 and are not yet concluded
- **Chrysler's TC by Maserati:** Years in the planning and making . . . and it didn't last as long or sell as many copies as the DeLorean
- **1984 GM reorganization:** Has been finetuned and finetuned and is now being dismantled, piece by sorry piece
- **Yugo:** Right price, wrong car
- **Rise and fall of Audi:** From 37,-071 sales in 1980 to 74,061 in 1985, then down to about 23,-000 in 1989
- ***60 Minutes'* coverage of sudden acceleration:** What turned out to be "pedal misapplication" has done irreparable damage to Audi
- **Audi 5000:** Its unintended-acceleration pardon from NHTSA came too late
- **Rough Riders:** Ron Tonkin's gang generates a lot of smoke but no heat
- **GM, Roger Smith and Ross Perot:** GM's buyout of Perot's EDS climaxed with the $700 million buyout of Perot and his lieutenants
- **Flossmoor, Ill.:** Does not allow pickup trucks parked within city limits
- **Cadillac Allante:** Folks just aren't ready for a $55,000 Cadillac, even with the name Pininfarina attached to it
- **GM's high-tech plants:** Buick City and Hamtramck plants were disasters until GM discovered that people make plants run
- **Renault Alliance:** After initial sales success, dealers couldn't give it away
- **Rebates and incentives:** A good idea that fell into disrepute because of blatant overuse
- **Hyundai:** Once the darling of the U.S. market, sales plunge at end of decade
- **Merkur:** Another entry on list of Big 3 failures with captive imports

Poling, Sarni list challenges of '90s

DETROIT — The 1990s will present challenges to survival as well as worldwide opportunities for the auto industry, and makers and suppliers will have to devote all their resources to meeting them.

That message emerged as a common theme in the keynote addresses — one from the manufacturing side, one from the supplier side — delivered at the Automotive News World Congress Sunday night.

In texts prepared for the opening-night speeches, Ford Motor Co. Vice Chairman Harold "Red" Poling and PPG Industries Chairman Vincent A. Sarni outlined the areas their companies will concentrate on as the new decade opens.

Both foresee more of the tough competition that flourished in the 1980s. Poling cited the large number of changes — in such areas as environmental regulations, consumer needs and international politics — that will face the industry.

"Those companies that will be the most successful are those that will rise to these challenges by acknowledging the new realities of the '90s, accepting the new responsibilities and initiating new responses that the 1990s will demand," said Poling, who will guide Ford in the early part of the decade as its chairman.

Sarni — whose company is a large supplier of automotive glass, fiberglass, chemicals and paints — pointed out the need for change in the relationship between suppliers and manufacturers. He said suppliers are "lagging behind" their automaker customers in achieving consistent quality and called for better communication between the two.

Sarni outlined eight items that should be on the agenda of any supplier that hopes to survive the 1990s:

- **Partnerships:** "There is a common

Detroit's international auto show attracted more than 1,000 journalists from around the world.

Auto show trends: *The words from Detroit are 'clean, frugal, safe'*

By Dutch Mandel
AUTOMOTIVE NEWS STAFF REPORTER

DETROIT — The second North American International Auto Show features technology honed by social and environmental concerns.

Clean-burning, lightweight and fuel-frugal engines; traffic-efficient vehicles, and safety exhibits are spread evenly around the 600,000-square-foot show floor.

Still, die-hard car fanatics are not ignored. A record number of new production and concept cars fill Detroit's Cobo Center. Among them: Chevrolet's 1991 Caprice, Buick's Park Avenue, Ford's redesigned Escort, BMW's flagship 850i coupe, Toyota's MR2, General Motors' 650-horsepower CERV III, ASC's Vision II and Volkswagen's Futura.

The show began Saturday, runs through Jan. 14 and features over 750 vehicles.

Import fighter by Cadillac could be a '95

By Charles M. Thomas
AUTOMOTIVE NEWS STAFF REPORTER

DETROIT — Cadillac unwrapped its luxury-grade import fighter at the 1990 North American International Auto Show here last week. The only glitch is, it won't be ready until the 1995 model year, if at all.

Called the Aurora, it is almost a mirror image of Cadillac's LSS, a previous concept car that was never publicly displayed.

LSS, short for Luxury Sport Sedan, supposedly was Cadillac's best offense against Toyota's Lexus and Nissan's Infiniti, as well as European imports. Cadillac officials contend the division isn't being hurt by Lexus and Infiniti. The European imports, they say, are being hurt.

But John Grettenberger, Cadillac general manager, said the LSS has been scuttled.

He said Cadillac had categorized the LSS only as a "concept," not a car. He called the Aurora "an extension" of the LSS.

The LSS never received official corporate approval to go into production even though officials said it could be ready by 1992.

> "Sleek styling, performance, handling and a solid, distinctive packaging theme are important, especially to younger buyers."
>
> John Grettenberger
> Cadillac

Grettenberger hinted strongly that the Aurora could be ready for production by 1994 and on sale the following year.

He said the company will conduct an extensive market research program during the next 12 months to decide Aurora's fate — production or the scrap heap.

"We want to know if current and potential luxury-car owners would be attracted to such a vehicle, and if it is in context with what Cadillac is and should be," he said.

He characterized the vehicle as

For 1990, Big 3 foresee sales erosion, not a gullywasher

By Charles M. Thomas
AUTOMOTIVE NEWS STAFF REPORTER

The Big 3 automakers appear to be giving the 1990 economy 2½ stars out of a possible four. Not exactly an Academy Award winner, but not a turkey either.

Ford Motor Co. and Chrysler Corp. predict 1990 calendar year sales of cars and trucks in the United States will be about 14.5 million units, down 2 percent from 1989's 14.8 million.

Chrysler adjusted an earlier forecast from 14.2 million units.

Economic Outlook Section Pages 29-39

And General Motors, the most bullish of the three, says this year's sales will range from 14.5 million to 15 million units.

George C. Eads, GM's economist, says 15 million is reasonable if price trends follow 1989, including broad use of incentives to reduce transaction prices.

Automotive News predicts industry sales at 14.5 million units while Wall Street analysts' forecasts range from a low of 13.7 million cars and trucks to a high of 14.7 million.

The National Automobile Dealers Association expects sales of cars and trucks to fall to 13.7 million in 1990. NADA bases its prediction on recent declines in sales trends.

NADA also estimated 1990 declines of 5 percent for domestic vehicles, 7 percent for imports and 3 percent for light trucks.

Ford projects sales of 9.6 million cars and 4.9 million trucks for 1990, while Chrysler predicts 9.5 million cars and 5.0 million trucks. GM does not subdivide its prediction.

Chrysler also expects that sales of foreign vehicles — including built-up and transplant vehicles — will not exceed the 1989 total of about 4.6 million units.

Both Ford and Chrysler peg U.S. economic growth next year at 1.5 percent, while GM says 1 percent to 2 percent.

Autos after perestroika:
Enormous demand for cars is forcing the Soviet auto industry to look West — and that means more joint ventures and exports are being planned. Stories start on Page 4.

Hyundai selects Hayden to direct its operations in U.S.

By Jesse Snyder
AUTOMOTIVE NEWS STAFF REPORTER

FOUNTAIN VALLEY, Calif. — Hyundai Motor America last week appointed Rodney E. Hayden executive vice president and chief operating officer, ending a three-month search for a top American executive.

Hayden, 58, becomes the third head of the Korean importer in six months. A veteran import hand, he gives Hyundai's thinned-out ranks of senior executives some badly needed sales and administrative experience.

Before taking early retirement in mid-1988, Hayden was senior vice president and general manager of Mazda Motors of America (Central). That organization made up the largest portion of Mazda's U.S. operations until the No. 4 Japanese importer combined its two U.S. sales organizations into a single unit. Hayden spent 16 years with Mazda, in both regional sales and national headquarters positions.

Hayden

Earlier, Hayden worked for 12 years at Chrysler Corp. in field sales jobs.

"We are pleased to have an individual of Mr. Hayden's knowledge and experience join our team, and we look forward to his leadership as we enter the 1990s," said H.W. Baik, president and chief executive officer of Hyundai Motor America.

Hayden inherits a company that is struggling to regain the momentum it had in its first three years of operation. It peaked in 1988 with sales of 264,282 cars, but fell to 183,261 last year, a decline of 30.66 percent.

Dealer profits — which had once sparkled — plummeted, and a number of showcase Hyundai dealerships were lost in 1989. Difficulties in finding lenders to finance Hyundai consumer loans forced Hyundai to create its own financing arm, which will begin operation early this year.

Executive Vice President Max Jamiesson left the company last July. His replacement, Greg Warner, who had been group vice president of sales and marketing, resigned in October.

Group Vice President Bruce Campbell has been acting chief operating officer. He will return to his previous post.

Hayden will have to act quickly to restore dealer and national staff confidence.

But the potential for recovery is in place.

Hyundai currently has 315 dealers, up slightly from last fall. A new Excel and the Sonata — a larger, Honda Accord-sized car — were introduced in 1989. Scoupe, a sporty coupe based on the new Excel platform, will arrive this year to give Hyundai three lines to sell. Until last year, it had only one.

GM's electrically powered Impact accelerates to 60 mph in 8 seconds.

LA SHOW: *GM's speedy electric Impact shares stage with environment*

By Jesse Snyder
AUTOMOTIVE NEWS STAFF REPORTER

LOS ANGELES — General Motors captured center stage at the 1990 Greater Los Angeles Auto Show by unveiling a fully-engineered prototype electric car.

The car, dubbed Impact, won't be a viable production vehicle until battery life can be doubled to at least 40,000 miles, GM Chairman Roger B. Smith acknowledged, but he expects that technological barrier to be breached within two years.

The GM initiative underscored the alternative fuels theme set by the keynote speaker during the media preview preceding the Los Angeles show, which opened Saturday.

Bill Sessa, communications director of the California Air Resources Board, noted that despite stringent air-quality regulations that have halved Southern California air pollution in the last 20 years, there are still 150 days each year during which breathing can cause permanent lung damage.

"Los Angeles is the only city in the United States where the air is actually getting better," Sessa said. "But it's still by far the worst air quality in the country." Air pollution in California is responsible for 75 percent of U.S. smog-related health problems, he said.

"An uncommon degree of cooperation between the fuels industry and the auto industry will be needed," said Sessa, to produce "ultra-clean" cars and gasoline that can meet tougher emission standards of 50 to 80 percent less polluting than current standards.

By 1997, California will probably require 20 percent of all new cars sold to meet this tougher standard, Sessa said.

Impact, patterned after the Sunracer experimental car that won a trans-Australia solar-powered vehicle race and styled by GM's Advanced Concept Center in Thousand Oaks, Calif., was touted by Smith as the first electric car designed from a clean sheet of paper instead of being a converted gas-engine car.

Citing Impact's 8-second, 0-to-60 mph acceleration (a GM video showed it beating a Mazda Miata and Nissan 300ZX off the line), Smith said the designers had tried hard to produce performance acceptable to Los Angeles drivers.

"I wouldn't want to get out there on an LA freeway in a golf cart," Smith said. "But this is a car that eliminates the objections to electric car performance."

Impact has a range of 120 miles on a single charge, and the 800-pound lead-acid battery pack must be replaced after about 20,000 miles, at a cost of about $1,500.

GM did not commit to produce Impact, but Smith said GM will conduct car clinics and other research to test public acceptance of the vehicle. If battery technology improvements hit GM goals and there is enough demand to justify "a full unit of production," GM could start production in four or five years, Smith said.

GM receives lowest grades as Harbour compares Big 3

By Charles M. Thomas
AUTOMOTIVE NEWS STAFF REPORTER

General Motors — by one account — made only $47 per vehicle in North America in 1988 while its rivals, Ford Motor Co. and Chrysler Corp., made $591 and $228, respectively.

Ford has had the greatest gain in productivity at its plants since 1979, improving it by 40 percent. Chrysler upgraded its productivity 17 percent while GM's edged up a scant 5 percent.

Those and other statistics highlight the recently published Harbour Report, a research study by Harbour & Associates, based in Troy, Mich.

James E. Harbour, president, spent 30 years in the automotive business, first at Ford Motor Co. and then Chrysler Corp., before retiring in 1980 as Chrysler's director of corporate manufacturing engineering. Shortly after, he opened the consulting and research firm.

Harbour

His previous report — issued 10 years ago — caused quite a stir. It documented how the Japanese auto industry had a $1,500 cost advantage over the Big 3 for subcompact cars.

His latest study traces the automakers' performance during the 1980s. But some of the data, although noteworthy, isn't new.

For example, it's no secret that GM's market share had dipped to 34.1 percent by the end of 1988 from 44.1 percent in 1979, while Ford's market share increased to 23.6 percent from 22.6 percent, and Chrysler's share climbed to 13.1 percent from 11.4.

Harbour calculates per-vehicle profits by dividing net earnings by factory sales.

However, for GM he first subtracts earnings from Electronic Data Systems Corp., GM Hughes Electronics Corp. and General Motors Acceptance Corp.

His report rates GM's performance the worst of the domestic car companies, but the automaker is taking the thrashing in stride.

"Jim Harbour has done a careful analysis of the changing competitive factors that have occurred within the North American auto industry in the 1980s," said a GM spokesman. "Much of it concurs with our internal reviews and continuing organization studies."

The spokesman said it's no surprise that cost imbalances exist between GM and other companies, but that GM differs with Harbour on the extent of those imbalances.

Harbour concluded that if GM were as efficient as Ford, it would require 60,000 fewer workers and its annual pre-tax profit would rise $4 billion. Chrysler would need 15,000 fewer workers and its annual pre-tax profit would be boosted by $475 million.

In 1988, Chrysler used 89 percent of its car capacity and 98 percent of its truck capacity to build 2.2 million units. Ford was at 100 percent for cars and 105 percent for trucks, building 3.9 million units. GM, which built 5.8 million, was 87 percent for cars, 89 percent for trucks.

Big 3 unit profit

Olds chooses dealer incentives over consumer rebates

By Michelle Krebs
AUTOMOTIVE NEWS STAFF REPORTER

DETROIT — Pleased with the results, Oldsmobile will continue to offer primarily dealer incentives rather than consumer rebates for the next month.

Incentive watch, Page 42

The division has extended the cash-to-dealers program through Feb. 2. The program began in November and was to expire Jan. 3. It pays dealers $500 to $2,500 for sales of 1989 and 1990 models.

"We have been very pleased with the way it has worked," said Oldsmobile General Manager J. Michael Losh. "It has been well received by the dealers and the press."

Oldsmobile will offer cash rebates to consumers on 1989 and 1990 Cutlass Supreme models in response to Ford Motor Co.'s rebate program on the competing Ford Taurus and Mercury Sable.

Buyers of 1989 Cutlass Supremes receive a $1,500 cash rebate or 4.8 percent financing on 24-, 36- and 48-month loans and 10.9 percent on 60-month loans.

Buyers of 1990 Cutlass Supremes receive a $1,000 rebate or the same financing rates.

Finance rates of 6.9 percent, 8.9 percent, 9.9 percent and 10.9 percent for 24, 36, 48 and 60 months, respectively, continue on most other Oldsmobile models.

Dealers contacted by *Automotive News* generally favored dealer incentives over the consumer rebates. They said they like the flexibility it offers them.

Oldsmobile sales dipped to 600,037 last year, down 16.11 percent from 715,270 in 1988. The division's sales topped 1 million in 1983-86.

Correction

In the Decade in Review feature Jan. 1, photographs of the Cutlass Supremes for 1980 and 1981 were transposed.

Ford's 1991 Escort will continue to spearhead the automaker's fight in the small-car market.

Many hopes pinned on '91 Escort

By Laura Clark
AUTOMOTIVE NEWS STAFF REPORTER

RANCHO MIRAGE, Calif. — Ford Motor Co.'s 1991 Escort and Tracer series represents the automaker's attempt to meet its Japanese competition head-on in the small-car segment while ensuring that it can meet tough corporate average fuel economy standards and rack up nameplate sales leadership for Escort for the fifth model year in a row.

Ford's Capri, Explorer. Page 62

The assignment is a tall order, particularly since in calendar 1989 Escort finished third behind Honda Accord and Ford Taurus.

"The Escort and Tracer are bigger to us than Saturn is to GM; it is bigger to us than Taurus/Sable was," said Keith Magee, Ford Division marketing manager.

"The Taurus/Sable was important in helping the turnaround of Ford Motor Co.; this introduction is to help keep us in business," said Max Jurosek, vice president of car product development, referring to the tough CAFE standards the company will face in the 1990s.

Ford has spent nearly $2 billion on the Escort/Tracer (CT20) project, including a $600 million makeover of the its Wayne, Mich., assembly and stamping plant, compared with the nearly $3 billion it spent on Taurus/Sable. The company hopes to sell 500,000 Escort/Tracer units annually, up from about 350,000 in 1989. About 80 percent of the 500,000 projected sales will be Escorts.

The Escort is scheduled to go on sale April 26.

To ensure that Escort/Tracer meets its sales targets, Ford said it will sell the 1991 Escort and Tracer at the same price as the 1990 Escort and take a loss on each one. Ford believes selling a new car for less than Japanese small-car competitors could draw buyers — many of them first-time Ford buyers — into its showrooms.

The price-loss strategy is to ensure that the high volumes anticipated for the Escort/Tracer are met.

Using Ford's 1.9-liter, four-cylinder engine, the Escort/Tracer is getting mpg ratings of slightly above 34 in Ford's in-house tests compared with 33.6 mpg on the present Escort engine.

Ford engineers and executives affectionately call the CT20 "our CAFE car."

Ford's marketing strategy will be to drive home the quality and value message vs. the imports. Ford engineers claim that the new Escort has about 50 percent percent fewer "things gone wrong" than the old Escort.

"Taking on the imports is tough because of the reputation they have for quality, and our task now is to convince people right up front that the quality is there — that's the key," said Magee, who expects Escort to maintain its 30.20 percent share of the subcompact market and capture import share.

Sales totals for 1989 were Escort, 333,353; Tracer, 57,966.

Ford has made a significant effort in training and testing the car. Last April, Ford asked 200 employees — from secretaries to procurement representatives — to drive the car from Dearborn,

1989 car-truck sales dip 6% to 14.8 million

By Arlena Sawyers
AUTOMOTIVE NEWS STAFF REPORTER

The holiday season failed to provide any sales gifts for the U.S. auto industry. The industry ended the year in a continuing sales slump.

The 1989 calendar year wound up with total sales of 14,842,401 cars and light-, medium- and heavy-duty trucks, a decline of 6.03 percent from last year's 15,794,004 units.

The 1989 breakout showed 9,867,414 car sales, down 6.83 percent from 10,591,107 in 1988. Sales of trucks of all sizes totaled 4,974,987, a dip of 4.38 percent from last year's 4,974,987.

December sales of new cars and light trucks totaled 989,076, down 21.40 percent from 1,258,319 in December 1988.

With one less selling day in December, new-car sales declined 25.81 percent to 650,357. Sales of domestic cars dropped 25.92 percent to 455,686 while sales of imported cars fell a like 25.56 percent to 194,671.

In the Dec. 21-31 period, the industry sold only 193,005 domestically built cars, down 29.05 percent from last year's 272,046.

Sales of domestically produced cars and light trucks in late December totaled 318,448, off 20.51 percent from the year-ago period. There were eight selling days in the 1989 period and nine days in 1988.

For the full year, Ford Motor Co. was the only one of the Big 3 to increase its share of the car market. Ford rose to 22.07 percent from 21.62 percent in 1988. General Motors, which ended 1988 with 36.08 percent of the market, slid to 34.84 percent in 1989. Chrysler, which had 11.25 percent of the market in 1988, declined to 10.33 percent in 1989.

The lost domestic market share wound up as gains by Japanese makers for their total imported and domestically produced cars. Led by Honda and Toyota, the Japanese racked up 26.00 percent of the market compared to 23.13 percent in 1988.

Toyota grabbed 7.33 percent of the market, an increase over last year's 6.50 percent; Mazda increased its share to 2.67 percent from 2.42 percent last year; and Nissan came in at 5.17 percent, up from 4.46 percent last year.

Honda grabbed 7.94 percent of

Skoda output dips as freed prisoners leave assembly line

By Richard Johnson
AUTOMOTIVE NEWS STAFF REPORTER

FRANKFURT, West Germany — The new, non-communist Czechoslovakian government's offer of amnesty to 20,000 prisoners has resulted in a loss of workers and a production slowdown for the Czech automaker Skoda.

Traditionally, prisoners have made up part of the industrial work force in Czechoslovakia's manufacturing plants.

Officials of Motokov, the country's auto industry ministry, say production should return to normal before the end of the month.

Petr Miller, Czechoslovakia's minister for labor and welfare, had reported that production at the Mlada Boleslav plant near Prague had come to a "near standstill" because so many workers were lost in the prison amnesty ordered by new Czech President Vaclav Havel on Jan. 1.

But a spokesman for Motokov in Prague said only 1,000 to 1,500 employees out of a total work force of about 20,000 at Mlada Boleslav have been lost. He said production has "slowed down, but not stopped."

"It is a difficulty that can be solved," he said. "We are taking extraordinary measures to solve the problem, and it should take a couple of weeks."

The spokesman did not speculate on how much output may be lost, but he said Skoda still expects to reach its production objectives for the year. He said the plant turned out 183,000 cars in 1989 and plans to build a few more — about 185,000 — in 1990.

The Mlada Boleslav facility produces the new, front-drive Favorit subcompact and the older, rear-engined Skodas that are due to be phased out.

BMW disbands dealer advertising groups

Importer urges retailers to use the $300-per-car saving to expand local marketing

By Jim Henry
AUTOMOTIVE NEWS STAFF REPORTER

BMW of North America has disbanded its dealer advertising associations and has stopped forcing dealers to pay an average of $300 per car into an advertising fund.

With the money freed from dealer advertising groups, BMW is "encouraging" dealers to buy their own ads and to step up marketing efforts in their local markets, said Carl Flescher, vice president of marketing.

BMW will continue to buy and place ads identifying local dealers, but only in its 25 or 30 top markets, he said. Some dealers may form their own associations to share ad costs, and some individual dealers may have to finance their own tailor-made ads.

"The job of the dealers is not to advertise BMW. That's our job. Their job is to market their own dealerships," Flescher said.

Ron Tonkin, president of the National Automobile Dealers Association and a critic of compulsory dealer advertising assessments, praised BMW's action.

"A dealer can far more effectively spend money to market cars in his own marketplace than somebody in New York or L.A. can do with a rather innocuous ad that identifies multiple dealers in fine print at the bottom," Tonkin told *Automotive News*.

"I hope this serves as an example to the rest of the industry."

Tonkin said manufacturers charge dealers for factory-sponsored ads based on either a dollar figure per car, like BMW, or on a percentage of the retail price.

"This can be the difference between making money or not making money, when you're spending $8,000, or $10,000 or $12,000 a month back to your automakers for advertising," Tonkin said.

Flescher said BMW's dealer advertising groups were abolished as of Jan. 1. The money — about $300 per car — primarily bought product-oriented ads that also identified local dealers, and "tactical" ads announcing special leasing programs and the like, he said.

In their place, BMW's seven regional marketing managers are helping dealers devise their own local plans, to be executed at the discretion, and at the expense, of the dealers themselves.

Flescher said the move is part of an effort to re-think BMW's whole marketing approach away from what he called "traditional" advertising and toward more "pro-active" efforts. Such efforts include delivering cars for test drives to busy professionals.

"We want to stop the passive dependence on advertising to develop floor traffic and sales. The task of marketing is a lot more than just waiting for the next ad campaign. Dealers have to get much, much better at local marketing," he said.

Without mentioning Lexus and Infiniti by name, he also noted that competition in the luxury market has made it prohibitively expensive to make an impression through advertising alone.

"In this (luxury) market, the big guns — GM, Ford, whoever, and especially the Japanese — are pushing through their advertising effort tremendous amounts of money toward the cost of traditional advertising. The media inflation is incredible," Flescher said.

ECONOMIC OUTLOOK ISSUE

WASHINGTON

Late 1989 plunge in car sales makes recession this year likely; countermeasures take six months to work

By Diana T. Kurylko
AUTOMOTIVE NEWS STAFF REPORTER

WASHINGTON — Economic problems that festered in 1989 will take their toll on the first half of 1990, plunging the economy into a period of slow growth and perhaps even recession, said Martha Seger, a governor of the Federal Reserve System.

"You have to look at how we're entering 1990. It's one thing if you're going in at a 45-degree angle because you've been gunning your engines all year," Seger said.

"But we've been in this progressively weaker environment."

Seger said the economy has grown so weak and vulnerable that the risk of recession is high. "I have a growth forecast for next year that is just barely anything, just enough so you can write it in black ink," Seger said. "Write off a few bucks, and you'd be in red ink, showing a decline."

Seger, who describes herself as a fiscal conservative, said she revised her forecast in November after seeing automobile sales figures. ". had a 50/50 chance of a recession. Now, some of the things going on in real estate, some of the terrible auto sales numbers the last two months have convinced me the odds have passed the 50/50, maybe we're 75 percent."

Seger said she is "generally concerned about the next couple of quarters."

In 1990, the growth in the gross national product will barely reach 1 percent, Seger said. "It wouldn't surprise me — there is a 75 percent chance, that we could get a couple of negative quarters. If that's going to happen, it will the first two (quarters) that will be a problem."

Seger said there is a good chance the first two quarters will be negative, led by problems in manufacturing — including the auto industry — and construction.

Seger said the 1989 business indicators suggest that the economy has been in a slowdown that first showed up in manufacturing activity. Manufacturing employment turned sluggish after the first quarter and continued to decline through the year.

Other sectors of the economy started the year weak and progressively lost strength. "What's happened more recently, those areas are weak and getting weaker," Seger said.

The economic problems are the result of Federal Reserve monetary policies that began with economic tightening in 1987. The Fed backed off its tightening after the stock market crashed in October 1987. "Then in early 1988, we started to put our collective feet on the brakes again from March 1988 to March of 1989," Seger said.

Interest rates rose from 8.5 percent in March 1988 to 11.5 percent in March 1989.

Interest rates stabilized, with the prime rate falling to 10.5 at year's end. But the "real economy" — output, employment and income — began to respond to the tightening in September. In the last quarter of 1989, the economy was still feeling the impact of tightening, Seger said.

While the reaction to the tightening rippled downward, the softening grew progressively worse, particularly in the automobile industry. Seger called October and November sales results "deficient and sadly anemic."

In addition, the last quarter experienced the delayed reaction to the strengthening of the U.S. dollar in the first nine months of the year. "This was an unexpected surge in the dollar against a number of foreign currencies," Seger said.

The growing dollar further dragged down the economy because an increasing number of American manufacturers were put at a competitive disadvantage in the foreign exchange market.

"Export business was very strong and a very significant part of our expansion in 1987 and 1988. In 1989, it was sort of petering out due to this situation," Seger said.

"The flip side of this is that it tends to pull imports in like a super-powerful magnet. Either way, it's bad for American business," she said. Automobile importers attempted to create a competitive advantage by holding down prices and advertising the policy, Seger said.

"Volkswagen has run one of those ads saying they've held their prices. Some of the other producers also have emphasized the fact that they're either selling their '90s at the same price, or they have compared their restrained behavior with the American producers' less restrained behavior," Seger said.

"I keep looking for things that are strong, sectors that are strong, and it's difficult to find them. I keep reading the numbers for consumer purchases, and they're not too strong either," she said.

Consumer spending is lethargic, housing is weak, and capital investment is tapering off, she said.

Low corporate profits have been the major disincentive for increased capital spending. "If your profits start looking flaky and shaky or if you have declines or, worse yet, if you have losses, first of all, the expansion arithmetic changes," Seger said.

"Second, most businesses have to rely on their profits, specifically on the profits they retain, to fund their expansion." Only a few businesses "can run into Wall Street and launch a bond issue or a stock issue," Seger said.

Government spending, on the other hand, has not had a significant impact on the growth of the economy because the deficit — as astronomical as it is — has not changed. "Our debt is big, too big, but it isn't getting bigger," Seger said. "In terms of giving a boost to the economy, when it's not changing, it's neither a boost or a drag on the economy."

With the talk of major defense cuts, defense will not give a boost to the economy but could drag the economic indicators down when the reductions are made.

"So I go through all this, and I say, 'Where's the oomph?' " Seger said.

RANDY SANTOS

Martha Seger: Strong dollar pulls "imports in like a super- powerful magnet."

"There's a lot of talk about soft landing. I don't want a recession, I know what damage they do, especially to a state like Michigan. It is not a desirable outcome," said Seger, a former Michigan banking commissioner.

"The slower the economy gets, the more vulnerable it is to some sort of an accident. An accident could be a negative reaction to something Congress does. There could be some tax bill, or it might be some international incident, a hijacking, kidnapping or breakout of war in the Middle East. You don't know."

The economy will be most vulnerable to a recession in the first six months of 1990. "It's too late for us (the Federal Reserve Board) to influence that period. I don't think a lot of people realize that," Seger said.

"Even if we did something terrific or super perfect. A move in December would not impact the economy until the summer."

"What we get in the first two quarters of next year and even in the third quarter is what a friend of mine calls 'baked in the cake.' It's being influenced by things we've already done, good things or bad things. Those moves are working their way through the economy" Seger said.

During the summer, as interest rates inched their way up, the Federal Reserve took modest steps to loosen monetary supply. Short-term rates declined 1 to 1.25 percentage points.

But "on net basis, that means rates are significantly above where they were in the spring of 1988," Seger said.

The interest rate situation makes her especially concerned about industries that are most sensitive to the credit market and high interest rates, including automobiles.

"I personally hope we will see additional easing steps and that this will result in better market rates, short and intermediate," she said.

"If I had my druthers, there would be more easing. Then, at worst, the economy would be flat. At best, maybe peeling off a couple percentage points."

But even a drop in the interest rate may not ease auto industry woes because of the toll rebates and incentives will take on future sales, Seger said. ""I'm interested in having some manufacturing in this country, and I'm interested in having an auto industry that is healthy, buoyant and thriving."

But Seger worries that six years of incentives will stifle future sales. "Unfortunately, we're starting to pay the price."

She explained, "If you buy a new car and get a five-year note on it, for a while, the buyer thinks this is terrific. I can get a new car and pay less a month for it.

"But what most buyers don't understand is that by the time the three years have gone by, they're sick of the car.".

"I have the urge to buy a new car, and a dealer looks at the value of a three-year-old car and looks at the outstanding balance of the loan and says 'Sorry, Charlie, you don't have any equity and, in fact, your equity may be a negative number,' " Seger said.

"I can't even count the number of people I know who have told me they have gotten trapped."

Sales will be weaker than they might have been because of the extended credit terms.

Seger said she spoke at the Economic Club of Detroit and shocked the audience with her prediction that 1989 sales would be down from 1988. "I think it's safe to say that was a pretty accurate forecast," she said.

For 1990, Seger predicts, domestic auto and light-truck sales will be down 10 percent from 1989 sales.

Import sales will also be down because "unlike a few years ago, the imports have also resorted to incentives, and they have gotten suckered into these extended terms," Seger said.

"They are dealing with the same American consumers as the domestic makes are."

While she is certain import sales will decline, Seger declined to give an exact prediction. But she said that the sales decline will not be as steep as that of the domestic models.

Declining auto sales cannot be blamed on consumer confidence. The consumer confidence index is still fairly decent, Seger said. "The average person's confidence is determined by whether or not they're employed, and employment in this country is at record levels," she said.

The employment picture is graying as major corporations, including International Business Machines Co. and American Telephone & Telegraph Co., announce massive layoffs. "As these things spread, they can influence the confidence level. It will be weaker," Seger said.

Should unemployment rise, consumer debt problems will have major repercussions on the economy, she said.

"There are economists who say 'Don't worry, we're seeing increases in holdings of liquid assets, so while consumers' liabilities are rising, their assets are rising faster,' " Seger said.

"There is a real danger here. You are so overwhelmed by these aggregates that you miss major developments that are going on in the guts, the composition."

The consumer group carrying the biggest debt load is not the group with the liquid assets, Seger said. "The gray panthers, the people in their late 60s and 70s, have built up holdings, bank accounts, mutual stocks," she said.

"But the fact that my neighbor has a big savings account doesn't affect me. That's what we're missing here.

"If you reach the point where quite a few people start losing their jobs, that could really give us the acid test of what the quality of consumer credit is," Seger said. Consumer debt is $700 billion — a total Seger finds alarming.

Home equity loans rose from nothing in 1984 to $100 billion in 1989. "That's an obligation for a growing number of people. Even though you have equity in your house, you need monthly cash flow to service that debt," Seger said.

"It makes me extremely nervous that people have tapped the equity in their homes to pay off other kinds of indebtedness, usually for tax purposes and to finance auto purchases, vacations."

Keeping the economy on track is "our No. 1 challenge," she said. "The economy has been growing more slowly in very recent months; we have to keep it on the tracks and keep it out of recession," she said.

"What a recession would do to our budget is incredible to think about," she said.

The first dent would be made in income tax collections.

With the increase in unemployment, expenditures would explode, Seger said.

The Social Security system would feel the strain of more people taking early retirement, and other programs would also feel the strain of rising unemployment. "If you have a recession that puts upward pressure on the expenditure side and downward pressure on the revenue side, it means the deficit wouldn't hang in there around $150 billion but it would probably go through $200 billion and head north," Seger said.

"It would be an automatic response to what's going on in the economy."

ECONOMIC OUTLOOK ISSUE

10 ANALYSTS

The bearish consensus is declining sales and fierce competition, but not as bad as recession of 1980-82

By Philly Murtha
AUTOMOTIVE NEWS STAFF REPORTER

The auto analysts are bearish. They see a definite downturn in 1990 sales of new cars and trucks.

Most of the 10 interviewed by Automotive News carefully avoided the word recession, although they admitted that economic growth slowed enough in the final months of 1989 to be troubling in the new year.

"It will be a very competitive market — more like the 1960s, when we had very shallow slowdowns. But there won't be an energy crisis," summarized Maryann Keller of Furman Selz Mager Dietz & Birney in New York.

Last year marked the eighth year of economic expansion, analysts said, but the growth cycle has reached a turning point. None thought 1990 would be as bad as the recession years of 1980-82.

Averaging the predictions of the 10 auto analysts indicates that car sales in the United States will fall about 5.5 percent to 9.5 million.

They predicted that truck sales will slip about 1 percent, to about 4.7 million.

Analysts see a softer economy based on economic growth of about 1.5 percent. They say unemployment may rise from 5.3 percent at the end of 1989 to as high as 5.8 percent.

In response to sluggish economic growth, the Federal Reserve Board is expected to reduce interest rates, which could help automobile sales.

For 1990, analysts concurred that Chrysler Motors stands to lose the most market share. The demise of Omni/Horizon is a major indicator of Chrysler's car volume and share losses, they said.

If the majority of analysts are right, General Motors will manage to reverse its downslide in car market share.

The consensus of the same analysts a year ago was that GM would gain the most market share of the Big 3 in 1989, but GM's share actually fell from 36 percent to about 35 percent.

The Japanese companies are expected to continue making inroads into the U.S. car market. Toyota/Lexus should be in the best position to gain share and and volume, and Mitsubishi is also expected to gain.

Many European car companies will be losers again in 1990, the analysts said. Most often mentioned were Mercedes-Benz, Audi and Saab.

Analysts surveyed, besides Keller, were: Bernard Campbell of Data Resources; Arthur Davis of Prescott Ball & Turben; Jean-Claude Gruet of UBS Securities; David Healy, an independent analyst; Jack Kirnan of Kidder Peabody; Ann Knight of Paine Webber; Michael Luckey of Luckey Consulting Group; Wendy Beale Needham of Smith Barney; and William Pochiluk of Autofacts.

Here is a summary of their forecasts:

Total U.S. Sales

U.S. consumers are expected to purchase or lease 14.66 million vehicles this year, down about 2.2 percent from 1989.

Pochiluk said he sees a mid-year recovery, and he added that he believes sales of light trucks will prop up the total.

New-car sales in U.S.

Three of the analysts predicted that 1990 sales will decline by only 450,000 units. Campbell said the Big 3 will rely on incentive wars. "They won't sit back and watch the Japanese share increase. One of the Big 3 will blink, and they will be back in bed. It's a fact of the marketplace," Campbell said.

New-truck sales in U.S.

Fewer light truck sales will be lost in 1990, the economists said. The heavy segment has already slowed because of a significant industrial slowdown.

Pochiluk said he believes the light-truck market will lose nothing in the year.

Domestic market share

Each of the Big 3 is likely to lose market share in 1990, the analysts said. But GM will lose the least of its car share in 1990 because of a strong new-product mix, and Davis said he believes GM could gain two points.

Keller, who thinks the best relative performance will come from GM, said, "I keep believing that the GM10 cars are much better than the rate at which they are selling."

Gruet said the Omni/Horizon decision made it easier to predict Chrysler's situation.

"Dynasty and Imperial will help some, but they are skewed more to a lower-end customer. There is scathingly hot competition."

Gains in share, imports

Toyota was unanimously named to gain share because of new products and volume boosts from Lexus.

"Even if Lexus sells only 50,000 cars in 1990 and the rest of Toyota sales are flat, Toyota would gain a half point of share," said Gruet.

Losses in share, imports

The most susceptible companies for losing market share in 1990 are European companies: Mercedes-Benz, BMW, Porsche, Saab and lower-end Yugo.

Among the Asian companies, Gruet said Subaru may lose share "by virtue of the fact that it has moved upstream."

Interest Rates

Nine analysts agreed that interest rates will drop in 1990, reflecting weaker demand and Fed intervention.

"The Fed will lower interest rates as a recession-fighting move," said Pochiluk.

Only Healy said interest rates might rise early in 1990: "There will be a revival in inflation, and the Fed might tighten slightly, and later loosen rates."

U.S. economic growth

The economy will soften signficantly this year, the analysts predicted.

Growth, measured by gross national product, will average a weak 1.40 percent in 1990, compared to 1989's 2.5 percent.

The weakest forecast was 0.5 percent from analyst Kirnan, who also predicted recovery in the second half.

Davis said, "We've been in a recession since spring 1989. It's been a broad-based reliquification period with income up and more-modest spending. Primarily, we are in an industrial slowdown."

Consumer confidence

All 10 analysts agreed that consumer attitudes will weaken in 1990.

European car sales

After several record years, car sales in Europe will decline slightly in calendar 1990, according to most of the analysts. Most predicted a 2 percent to 4 percent decline in car sales on the Continent.

'LEMONS' OF '80s: *Safety center says decade had big crop of bad cars*

By Diana T. Kurylko
AUTOMOTIVE NEWS STAFF REPORTER

WASHINGTON — The Center for Auto Safety says automakers rushed so many new cars onto the market in the 1980s that they produced a bumper crop of lemons.

In a "not so fond" farewell to the decade, the center selected several vehicles that it said "epitomize the worst in automotive technology."

"There were more lemons in the '80s then ever before because there were so many new models," said Clarence Ditlow, director of the center. Ditlow said defects soared because automakers were pushing to downsize cars and improve fuel efficiency while keeping pace with the competition.

Most of the problem cars were manufactured between 1980 and 1985, Ditlow said. With that in mind, "we are hopeful that the 1980s represents the low point and that the 1990s will be the height," he said.

The "awards" drew harsh criticism from Thomas Hanna, president of the Motor Vehicle Manufacturers Association. He called the selections "a ridiculous exercise" and said "people should be cautioned not to take it seriously because it isn't based on serious research and analysis."

Hanna said Ditlow has missed the most important story of the 1980s, which is "a remarkable improvement in automobile quality and safety."

Ditlow said four vehicles stuck in his mind as the biggest lemons: the General Motors X-car, Ford Aerostar, the 1981-83 Chrysler Imperial and the Maserati Biturbo.

Ditlow said GM's X-car would have had fewer problems if its launch had been delayed a year. He said the Chevrolet Citation, Oldsmobile Omega, Buick Skylark and Pontiac Phoenix were recalled 13 times in their first year of production.

He also accused Ford of rushing the Aerostar to the market in 1986. It has been recalled six times. Ford "was trying to play catch-up with the Chrysler minivan," Ditlow said.

Chrysler's 1981-83 Imperial was so problem ridden — many of them tied to computer malfunctions — that it was dropped after only three years on the market, Ditlow said.

The Center for Auto Safety also selected generic lemon winners for five categories. They are: Most Costly, 1980-85 General Motors V-8 diesels; Most Deadly, 1966-80 Fords with automatic transmissions that slip from park into reverse; Most Widespread, 16 million 1980-88 GM front-wheel-drive cars with defective power steering systems; Most Fire Prone, Ford cars and trucks that were subject to more than 60 recalls affecting 6 million vehicles during the decade; Most Slippery, four GM automatic overdrive transmissions, the subject of more than 200 dealer bulletins covering a variety of problems.

LEMONS OF THE 1980s

The Center for Auto Safety named lemons of the 1980s in 21 categories.

Category	Vehicle
Economy	Renault Alliance/Encore
Compact	GM X-car (Citation, Omega, Skylark, Phoenix)
Sport Coupe	Dodge Charger/Plymouth Turismo
Two Seater	Pontiac Fiero
Family Sedan	GM A-car (Celebrity, Cutlass Ciera, Century, 6000)
Luxury	Chrysler Imperial
Muscle Car	Chevrolet Camaro/Pontiac Firebird
Light Truck	Chevrolet S-10
Minivan	Ford Aerostar
Sport-Utility	Suzuki Samurai
Convertible	Cadillac Allante
Motor Home	Winnebago LeSharo, Phasar & Centauri
Ambulance	Ford E350
Exotic	Maserati Biturbo
Most Fragile	Honda CRX
Japanese	Toyota Camry
European	Peugeot 505
Eastern Bloc	Yugo
4wd Car	AMC Eagle
Least Known	Sterling 825
Showcase	1985 Cadillac DeVille/Fleetwood

DRI sees 5-year rise in world car sales

By Richard Johnson
AUTOMOTIVE NEWS STAFF REPORTER

FRANKFURT, West Germany — Despite earlier forecasts of a downturn in world passenger-car demand in 1990, the research group DRI Europe now expects a continuous growth in global sales during the next five years.

But the North American new-car market will be more than one million units below its 1986 peak in 1994, according to DRI Europe's latest World Automotive Forecast Report.

The small worldwide increase in sales pegged for this year and next is attributed to the lateness and mildness of the expected European sales decline and to the strength of the Japanese market following 1989 tax reforms.

In a forecast prepared several weeks before the end of 1989, the London-based research group put 1989 demand at 35,245,000 million units — an increase of 2.4 percent over 1988. Increases in Europe and Japan offset the North American decline.

"World car demand remained strong in 1989, rather stronger than was thought possible at the beginning of the year," the report said.

DRI predicted world demand in 1990 will essentially be stable, with an increase in Japan and gains in several smaller markets counterbalancing a further decline in North America and a long overdue fallback in Europe.

DRI Europe foresees world registrations rising almost imperceptibly to 35,251,000 in 1990 and continuing to grow to 38,422,000 units in 1994.

It predicts North American sales — the United States and Canada — will slip from 11,141,000 in 1989 to 10,992,000 in 1990 and rise to 11,278,000 in 1991.

"The underlying determinants of consumer spending and car demand continue to signal a downturn," according to the report.

Western European new-car sales will fall from an estimated 13,264,000 in 1989 to 13,093,000 in 1990 and 12,967,000 in 1991, DRI Europe predicted. Japan will rise from 4,203,000 in 1989 to 4,277,000 in 1990 and continue to climb thereafter.

DRI Europe expects sales in Japan to rise 7.5 percent from 1990-94 to 4,601,000. During that five-year-period, sales in Western Europe will rise 5.9 percent from 13,093,000 to 13,872,000, and sales in North America will increase 5.3 percent from 10,992,000 to 11,580,000.

But the combined U.S. and Canadian market in 1994 will be more than million units below its 1986 peak of 12,541,000 units, according to DRI, while both Western Europe and Japan are expected to set records in 1994.

While the United States and Canada accounted for 38 percent of the world automotive market in 1986, they represented only 32 percent in 1989. DRI expects that to fall to 30 percent by 1994.

On the production side, North America accounted for 29 percent of world passenger-car output in 1985, but only 22 percent in 1989.

The addition of Japanese transplants in North America is expected to maintain North America's share of world car production at about 22 percent during the next five years.

For the same reason, Japan's share of world auto production, which has been about 24 percent since the mid-1980s, will remain at about that level or possibly decline during the next five years, DRI Europe said.

PROFESSIONAL SALES AND DEALER PLATE CONTROL SYSTEM

ConTroLit takes an age old problem and creates a positive solution, with added benefits.

The Age Old Problem: Missing or mis-managed dealer plates.
The Solution: A device that keeps dealer plates under coded lock and key and shows which salesman uses which plate and when it is used.
The Added Benefits: Dealer management is able to track salesforce demo activity and demo cars on a daily foolproof basis. With a salesperson's security deposit on coded key, dealer eliminates monetary exposure. That key cannot be retrieved until the plate is returned.

Take control of your dealership NOW and eliminate dangerous liability with ConTroLit.

6 salesperson systems starting as low as $395.

U.S.-built Volkswagen models sold after June 30, 1988, are included in import totals.

SALES

FROM PAGE 3

the market, the largest share among the Japanese manufacturers. Much of Honda's success can be attributed to its Accord, which was the best-selling car in the United States in 1989. It was the first time a Japanese-designed car took top honors. Sixty-one percent of the cars Honda sold in the United States were built in this country.

In 1988, the best seller was the Ford Escort. Escort — with an all-new 1991 model due this spring — ranked third in 1989. Ford Taurus captured second place.

Last year's total of 14.8 million car and truck sales was the lowest since 1984 when sales fell a bit short of 14.5 million, and this year has opened on a sour note.

GM, Ford and Chrysler will close 42 of their 62 assembly plants in the United States and Canada for a week or more this month, idling some 140,000 workers. The shutdowns will trim production by about 400,000 vehicles.

Also, manufacturers have provided millions of dollars in the form of customer and dealer rebates and low-interest financing to stimulate showroom traffic. Those rebates, analysts believe, pulled sales into the third quarter and contributed to softer sales in the final three months of 1989.

PRODUCTION

Output skids: 4th quarter is 7-year low

By Kathy Beyer
AUTOMOTIVE NEWS STAFF REPORTER

U.S. auto production for the final quarter of 1989 was 1,633,710, the lowest total for that period since the recession of 1982 when 1,203,660 cars were built.

Fourth-quarter car output dipped 13.93 percent from 1,898,220 in the fourth quarter of 1988.

The updated car production estimate for calendar 1989 is 6,857,470 units, 3.81 percent below the 7,129,420 assembled in the 1988 calendar year.

December's car build of 430,666 slid to the lowest total for that month since the 1982 figure of 383,921.

Last month's production dropped 22.66 percent from 556,812 in December 1988.

Automakers scheduled production of only 40,737 units last week as downtime for inventory adjustment extended the holiday at nearly 20 assembly plants.

Last week's estimated production was split as follows: Ford Motor Co., 34.51 percent; Honda of America Manufacturing, 14.78 percent; Chrysler Motors, 10.56 percent; Mazda Motor Manufacturing (U.S.A.) Corp., 9.82 percent; Toyota Motor Manufacturing U.S.A., 8.43 percent; New United Motor Manufacturing Inc., 8.15 percent; Diamond-Star Motors, 5.37 percent; Nissan Motor Manufacturing Corp. U.S.A., 3.88 percent; General Motors, 3.15 percent; and Subaru-Isuzu Automotive, 1.35 percent.

Truckmakers built 912,249 units during the final quarter of last year, 11.66 percent below the 1,032,658 completed in the fourth quarter of 1988.

Estimated calendar-year truck production of 4,099,049 units was 0.81 percent below the 1988 actual build of 4,132,729.

December's assembly of 271,353 trucks fell 14.69 percent short of the year-ago month's 318,070, which is the all-time high for December.

Last month's total also was about 14,000 below the 285,494 trucks produced in December 1987.

Canadian cars rise for quarter

Canadian car production for the fourth quarter of last year totaled 280,696 units, 24.42 percent above the year-ago quarter's 225,604.

The updated calendar-year car estimate is 1,004,247, 2.15 percent below the 1,026,323 built in 1988.

Car assembly during December totaled 81,497, up 36.61 percent over the year-ago month's 59,657.

Canadian truckmakers completed 221,901 units in the final three-month span of 1989. That was 10.17 percent below 1988's fourth-quarter build of 247,035.

Truck production for the 1989 calendar year is estimated at 942,235, an increase of 0.90 percent over the 1988 total of 933,826.

Last month's truck production of 62,514 slipped 12.16 percent from the year-ago month's 71,170.

UAW will propose special Horizon to save plant

By Kathy Jackson
AUTOMOTIVE NEWS STAFF REPORTER

DETROIT — Union leaders from the soon-to-be closed Chrysler Motors Jefferson Avenue assembly plant this week will give Chrysler officials a marketing proposal for a special model they hope will save their jobs.

John Miller, president of UAW Local 412, which represents white-collar engineers at the Jefferson plant, said the proposal calls for producing a special edition Plymouth Horizon to be sold in areas where the Horizon still sells well.

A meeting is scheduled for Tuesday at Chrysler headquarters in Highland Park, confirmed Chrysler spokesman Lee Sechler. He said that "the topic would be Jefferson" and that Anthony St. John, vice president of human resources, would represent the automaker.

Miller conceded the union's chances of changing the company's mind are slim. "It doesn't look good," he said.

But the concept got an approving nod from international union leadership who were informed of the marketing proposal Jan. 8 at Solidarity House, the union's Detroit headquarters, Miller said.

Attending were Miller, UAW President Owen Bieber; Stan Marshall, vice president and director of the Chrysler division; Robert Lent, director of UAW Region 1/1B; Aaron Taylor, president of UAW Local 7, which represents the production workers; and Frank Monaghan, president of UAW Local 889, which represents the office workers.

Miller said a union survey shows that the Horizon sells especially well in industrial and college towns, as well as to first-time buyers. The union will propose that the car be marketed in those areas at zero percent financing for three or four years.

A separate survey, returned by 30 Detroit-area new-car dealers to UAW Local 7, showed that 90 percent of the dealers think that Horizon was not properly marketed by Chrysler, Miller said.

"It's not that the car was losing money," he said. "I believe that the company wants to push on the public cars that can make a bigger profit margin."

Horizon and its clone, Dodge Omni, are the only products at Jefferson.

In 1989, Chrysler Motors dealers sold 39,315 Horizon and 40,185 Omni models, down more than 34 percent from 1988 totals.

Miller said he thinks the surveys indicate that Horizon would be a better seller than Omni; that's why the union wants to build

WORLD CONGRESS

Speakers warn of peril in the '90s; some drop hints seeking federal help

By Edward Lapham
MANAGING EDITOR

DETROIT — The 1990s will be a perilous decade for U.S. automakers, which face diminishing market share, escalating product development costs and renewed regulatory pressures.

That was the overview at the 14th Automotive News World Congress last week, where 30 speakers told 500 registrants that the 1990s will be an intensified continuation of the 1980s.

It wasn't all doom and gloom at the congress, but it was clear that the domestic auto industry faces perplexing challenges and difficult decisions in the next decade.

Those challenges and decisions were framed in many ways, including some that sounded like a call for protectionism.

Saturn prices start below $10,000

By Kathy Jackson
AUTOMOTIVE NEWS STAFF REPORTER

DETROIT — Most of the Saturn cars that go on sale this fall will be priced between $10,000 and $12,000.

Donald W. Hudler, vice president of sales, service and marketing for Saturn Corp., also laid out an ambitious goal for the new car line of selling to at least 80 percent conquests: customers who had intended to buy non-GM models, particularly Japanese imports.

"I'm pleased to say that Saturn is on target toward meeting these ambitious goals," Hudler said.

The new General Motors subsidiary plans to produce 240,000 models the first year, but Hudler would not speculate on unit sales.

He explained the pricing strategy and sales goal at the Automotive News World Congress.

He said the pricing is consistent with the Japanese imports — such as Toyota Corolla and Honda Civic — that Saturn believes to be its chief competitors. The Corolla sedan and two-door models range from $8,700 to $13,000; the Civics range from $6,900 to $12,000.

Hudler said that based on trim and option packages, some of the Saturn models will cost less than $10,000 and some more than $12,000.

Three Saturn models will roll out this fall — a low- and high-end four-door sedan and a two-door hatchback. The cars are similar in size to the Civics and Corollas. The interior is a bit larger, industry sources say.

Advertising should begin in the summer, Hudler said.

Two dealers praised the pricing.

The company gives a dealer an exclusive franchise in each of 250 to 300 marketing areas in the United States. Hudler said it has not been decided if the car will be sold in Canada.

About 60 stores are expected to

Palmer Group aims at $2 billion in 1991

By Charles M. Thomas
AUTOMOTIVE NEWS STAFF REPORTER

Arnold Palmer Automotive Group Holdings will forge a national dealership network, acquiring 16 more dealerships by the end of 1991. It will bring the number of company points to 41 with 82 franchises, two-thirds of them domestic.

The company has raised $250 million in a privately placed stock offering through New York-based Bankers Trust Co. to make the acquisitions.

By the end of next year it will have sales in excess of $2 billion on unit sales of roughly 200,000.

Some of the other largest groups are Hendrick Management Group, based in North Carolina, which has 35 points and 51 franchises; and the Potamkin Cos. with 24 points and 60 franchises.

Unlike them, the Palmer group has the financial capability and the interest in buying dealerships at price tags in excess of $25 million, said James O'Neal Jr., chairman of the Orlando, Fla.-based company.

And although the Penske Corp., a large conglomerate of dealerships and other enterprises, has the financial capability, O'Neal said its business interests apparently lie in other directions.

He said the Palmer group, which had $923.4 million in sales in 1988, will conduct a public stock offering within three years.

GM follows Suzuki over fallen Iron Curtain into Hungary

By Michelle Krebs
and Mary Ann Maskery
AUTOMOTIVE NEWS STAFF REPORTERS

Hungary will shortly acquire a car manufacturing industry.

General Motors is expected to announce a deal in the next few days to build cars and engines there.

It follows confirmation that Suzuki Motor Co. has agreed to set up a joint venture in Hungary.

The deals mark the first auto-making ventures in Eastern Europe by the United States and Japan.

They will also turn Hungary, a substantial bus, truck and component maker in the Eastern Bloc, into a car-making country. The cars will be sold in Hungary, at least initially.

The GM deal calls for a joint venture with state-owned truckmaker Raba to build Opel Kadetts. It also would involve production of 1.6-liter engines for use in Opels sold in Western Europe.

The joint venture, in which GM is expected to hold a majority interest, would be worth about $150 million.

GM-Europe refused to comment on the specifics of the deal.

GM-Europe refused to comment on the specifics of the deal. It would only say that it is still in negotiations with Raba.

The Kadett would be built at a nearly completed plant in Szentgotthard, Hungary, located by the Austrian-Hungarian border, and not far from GM's engine and transmission plant in Aspern, Austria. Initially, the plant would produce 10,000 to 15,000 cars.

The operation would produce the 1.6-liter Family 1 engine used in mid-size Opel and Vauxhall models in Europe. It could eventually build up to 200,000 engines annually.

GM-Europe has lost sales because of capacity constraints, particularly in engines. It recently began buying engines from GM's partner, Daewoo Motor Co., in South Korea.

It plans to import 20,000 to 25,000 engines in 1990 to be installed in cars assembled at GM's plant in Bochum, West Germany.

GM already has a barter agreement with Mogurt, the Hungarian foreign trading company through which GM provides parts technology and about 1,000 Kadetts a year in exchange for castings. Opel began shipping cars to Hungary in 1988.

The Hungarian venture will produce 15,000 Suzuki Swifts in 1992.

GM sells some Kadetts already in Hungary — about 6,000 in 1989. But lack of hard currency in Hungary limits GM's further opportunities to export vehicles into Eastern Europe, which is what likely led to the plan to build cars there as well as engines.

The Suzuki agreement came just before the trip by Prime Minister Toshiki Kaifu of Japan to Eastern Europe, where he is presenting $1.2 billion in aid.

The Hungarian project calls for a new 20 billion yen ($138 million) plant to produce the 1-liter and 1.3-liter subcompact Cultus (Swift). The plant will be located in Esztergom, about 30 miles north of Budapest.

Production will start in 1992 with a target of 15,000 units the first year, 50,000 the second year and 100,000 eventually.

Suzuki will own 30 percent of the project and a Hungarian group, Autokonszern, 50 percent. International Finance Corp. and C. Itoh have 10 percent each.

Although Suzuki denied any political connections with the prime minister's trip, the timing is politically advantageous for the Liberal Democratic Party, which faces a critical election next month.

A senior executive of one company called the Suzuki deal a present from the auto industry to the ruling party, which has severely criticized industry leaders for not giving more support during the party's recent political crisis.

Daihatsu, Poland deal?

TOKYO — Daihatsu Motor Co. hopes to start production in Poland early next year. It has proposed an interim program to speed up the project to produce the 1.3-liter Charade with Fabryka Samochodow Osobowych of Poland.

Daihatsu is asking the Polish side to agree to limited knock-down kit assembly as an initial stage to get the project off the ground.

Daihatsu and a consortium of Japanese partners have always insisted on some backing from the Japanese government, but that approval has been dependent on Poland's ability to reschedule its debt payments.

The latest development came during the visit of Prime Minister Toshiki Kaifu of Japan to Eastern Europe.

The project now under discussion would cost more than 100 billion yen ($714 million). Daihatsu said it would still require additional Japanese government backing.

— Mary Ann Maskery

Grant gets Jaguar job

Irish-born exec held Ford post in U.S.

By Daniel Ward
STAFF CORRESPONDENT

LONDON — Ford Motor Co. has appointed one of the chief architects of the Jaguar acquisition as Jaguar's full-time executive deputy chairman.

John Grant, who was born in Belfast, Northern Ireland, was Ford's chief business strategist in Europe and for the last year has been executive director of Ford's corporate strategy staff in Dearborn, Mich. He will work with Sir John Egan, Jaguar chairman.

At 44, Grant is the youngest member of Ford's top management. He is considered a fast-tracker by company insiders. Grant was one of the key negotiators for Ford on the Jaguar deal.

Lindsey Halstead, Ford of Europe chairman, will be a member of the Jaguar board as a non-executive director.

"Their experience will clearly strengthen our board," Egan said. "In his role as executive deputy chairman, John Grant will assist in the development of a smooth working relationship between Ford and Jaguar and will also be responsible for the effective coordination of forward planning processes and Jaguar's access to Ford's technical and financial resources."

Grant will move to Coventry, England, to take up his new appointment in the next few days. In the Jaguar hierarchy, he ranks above the previous No. 2, Michael Beasley, assistant managing director and former manufacturing director.

The significance of Grant's appointment is that Ford now has one of its own executives at Jaguar should Egan decide to leave.

To date, Egan has said only that he will remain until the transition is finished and plans for Jaguar's future under Ford's ownership are complete. He will then review his position.

John Grant

Grant joined Ford of Europe's finance staff in 1967 and spent several years on the corporate finance staff in Dearborn before becoming Ford of Europe treasurer in 1985. He was named vice president of business strategy for Ford of Europe in late 1987 and returned to the United States in 1989.

Automotive News Staff Reporter Laura Clark in Detroit contributed to this report.

Ford Mexico plant to make Zeta engine for U.S. cars

By Laura Clark
AUTOMOTIVE NEWS STAFF REPORTER

DETROIT — Ford Motor Co. will build the North American version of its four-cylinder Zeta engine in its Chihuahua, Mexico, plant, according to Ford component suppliers working on the project.

The North American Zeta engine eventually will be used in the replacements for the Ford Tempo and Mercury Topaz, which are scheduled to debut in the 1993 model year, and in the Ford Probe, around the same time, according to suppliers, who spoke on the condition of anonymity.

The European version of the Zeta engine will debut next year in the European Escort. The European Zeta will be a 16-valve engine and will be offered in two versions — a 1.4-liter for small cars and a 2-liter for large cars, according to reports in Europe. The engines will be built in Ford's Bridgend, Wales, plant.

Max L. Jurosek, vice president of car product development, said no decision has been made on the engine's displacement for the North American Zeta.

The present Tempo/Topaz is powered by Ford's 2.3-liter, four-cylinder engine.

The Zeta engine reportedly will have four valves per cylinder and light-alloy heads. It could have either a cast iron or aluminum block, according to industry reports.

It had been widely reported that the North American Zeta engine would be built in Ford's Dearborn, Mich., engine plant. But sources say Ford chose Chihuahua instead.

The Dearborn plant currently builds fuel tanks and 1.9-liter four-cylinder engines for the Escort. A replacement for the 1.9-liter is expected to be introduced in the mid-1990s, but no production site has been announced.

Cerritos deal typifies Acura efforts to keep top CSI spot

No magic formula, just hard work

By Jesse Snyder
AUTOMOTIVE NEWS STAFF REPORTER

CERRITOS, Calif. — Marie Jones is steaming when she shows up at the general manager's door at Cerritos Acura. She is not a happy customer.

General Manager Dick Kennedy introduces himself and a reporter, then eyes a white plastic shopping bag that clanked when she placed it on his desk. "I presume your complaint has something to do with what is in that bag," he says.

Jones pulls out a badly bent jack. It's from her 1986 Acura Legend. The white-haired Long Beach resident got a flat the previous night, and when a passing Good Samaritan tried to change the tire for her, the scissors-type jack bent, forcing her to call her road club service.

"That was the first time I ever tried to use that jack," Jones says. "It doesn't seem right that it should fail."

But what upsets her is that the parts counterman wanted her to pay $66 for a replacement. She has taken her protest to Kennedy.

Kennedy readily agrees that the jack should be replaced free, but it's clear that Jones is still troubled. Gradually, it comes out. She's never used this kind of jack before. Could someone show her how it works?

Kennedy introduces her to Service Manager John Arnold. There's no jack in stock, so Arnold pulls one from a new 1990 Legend. He uses it to lift the left rear tire of Jones' car clear of the ground and lower it before stowing the new jack in her trunk.

Jones thanks Arnold and flashes the reporter a smile.

"I'm satisfied," she says, driving off.

Another small victory on the customer satisfaction battlefield. Acura dealers win more than anybody else, according to the Customer Satisfaction Index survey compiled annually by J.D. Power and Associates of Agoura Hills, Calif.

Acura has captured the No. 1 customer satisfaction rating three years in a row, each year it has been eligible since American Honda introduced the upscale car in 1986.

The J.D. Power CSI award has become the Holy Grail in an industry that has increased its emphasis on customer service. Many experts believe that treatment of customers will determine the winners and losers in the 1990s.

Acura advertises its customer-satisfaction rating heavily, devoting a fifth of its estimated $50 million annual advertising budget to the issue.

Acura has improved its CSI score each year. If it had not, Acura would have lost its crown to other manufacturers that have raised their ratings and are closing in, said Jay Ferron, a partner at Power.

In fact, in a separate California-only tally, Nissan moved from back in the pack to edge Acura for the state title earlier his year.

And Lexus and Infiniti, rival Japanese luxury-car divisions that will be eligible for the Power CSI competition in 1990, are gunning

Volvo GM sets up three regional marketing companies

By Joseph Bohn
AUTOMOTIVE NEWS STAFF REPORTER

In a major reorganization of its sales and marketing functions, Volvo GM Heavy Truck Corp. has created three independent operating companies to market White-GMC and Volvo tractors and trucks.

The new companies, each with its own president and staffs to handle sales, marketing, service, parts, dealer development and financial responsibilities in their marketing areas, began operating Jan. 1, according to Thage Berggren, president and chief executive officer of Volvo GM Heavy Truck.

Each company will have annual sales of about $500 million and will be staffed with executive and support personnel drawn chiefly from within the company.

The new companies are Northern WhiteGMC, headquartered in Columbus, Ohio; Southern WhiteGMC, headquartered in Greensboro, N.C.; and Western WhiteGMC, headquartered in Ogden, Utah.

Stella

Young

Edling

Maggio

The sites were chosen because of their central locations within the operating companies' service areas and their proximity to company assembly plants.

Volvo GM previously had five sales regions with little autonomy, reporting to corporate headquarters in Greensboro.

The three new highly autonomous operating companies were created to provide closer ties and quicker responsiveness to dealers and retail customers.

"If a customer in Georgia needs information or satisfaction, he can talk to SouthWhite, without having to go through Greensboro," Berggren said.

L. Francis Stella, previously Volvo GM's vice president of parts and service, was named president of Northern WhiteGMC.

Terry Young, previously director of marketing, became president of Southern WhiteGMC.

Thomas Edling, previously director of sales and marketing for Volvo GM Canada Heavy Truck, became president of Western White-GMC.

The new companies report to Volvo GM Heavy Truck corporate headquarters in Greensboro through commercial operations.

That is a newly established function headed by Giorgio M. Maggio, new executive vice president of Volvo GM Heavy Truck. He had been president of Volvo Veicoli Industriali S.p.A. heavy-truck operations in Italy.

In the decentralization of the company, corporate sales, marketing and parts staffs will be redistributed among the operating companies.

Some functions still will be handled through the corporate operation such as manufacturing, the management information or computer system and human relations operations.

There will also be some limited national marketing, as well as some national parts and service, finance and dealer development functions.

Volvo GM is renting office space in Ogden, Columbus and Greensboro to accommodate the new operating companies, keeping the Greensboro-based Southern WhiteGMC separate from the corporate facilities there.

Northern WhiteGMC consists of dealers in 18 states from Maine through Minnesota and down into Illinois. It also includes one dealer in West Virginia.

Southern WhiteGMC consists of dealers in 16 states from Virginia and West Virginia through Missouri, Kansas, Oklahoma and Texas.

Western WhiteGMC consists of dealers in 16 states in Alaska and Hawaii and from California through North and South Dakota. It also consists of one dealer in Iowa and one in Texas.

'89 light-truck sales finish second best

By Joseph Bohn
AUTOMOTIVE NEWS STAFF REPORTER

They didn't set a record, but light-duty truck sales in the United States last year were the second-best ever.

Manufacturers aren't complaining much about the 4,680,335 light trucks they sold in calendar 1989, even if the total did fall short of the previous year's record 4,872,896.

For U.S.-based companies, whose share of the car market has been steadily eroding, the good news was that they continued to increase their penetration in light trucks.

U.S.-based firms captured 86.65 percent of the light-duty market, up from 85.54 percent in 1988.

The importers' share dropped 1.11 percentage points to 13.35 percent. Their market erosion wasn't nearly as precipitous as in calendar 1988 when they lost more than 4 percentage points, dropping from 18.59 percent to 14.46 percent.

The importers' share has stabilized, and Detroit will face a fierce fight to capture more ground or even protect its current market-share gains from the importers.

GMC Truck posted the only sales record among the domestics. Its 353,788 light-truck total was up slightly from the previous high of 352,999 in 1988.

Chevrolet gained ground on Ford last year, though its 1,309,837 sales still trailed Ford's 1,401,994 by 92,157 units.

At Ford, the only sales increases were in the Aerostar compact van and the full-sized Bronco sport-utility.

Chevrolet had an increase in its Geo Tracker sport-utility sales. The vehicle was a late entry in 1988 and was still in an acceleration mode in 1989.

General Motors' 1989 total included the first sales of the new front-drive Chevrolet Lumina APV, Pontiac Trans Sport and Oldsmobile Silhouette.

Combined sales of the three vehicles totaled only 15,124, though they are expected to add nearly 200,000 units to this year's tally.

Last year also marked the first appearance of the Chrysler Town & Country front-drive van. Sales of the Plymouth Voyager, Dodge Caravan and Caravan C/V were off in 1989 and appear likely to slip further this year under the onslaught of new minivan competition from Ford, GM and the importers.

Dodge recorded gains in full-sized van sales last year; they benefited from the company's rebate program.

Dodge D/W series full-sized pickups notched 90,302 sales, up from 82,013 in 1988.

GMC says there's gold in sale of accessories

By Francis J. Gawronski
AUTOMOTIVE NEWS STAFF REPORTER

LAS VEGAS — GMC Truck Division is urging its dealers to "accessorize" their retail operations to meet the challenges of the new decade.

Fierce competition among manufacturers at all levels will be the overriding theme of the 1990s, John D. Rock, general manager of GMC Truck, said in a speech outlining the effects of that competition on the light-truck market and how GMC plans to overcome it.

Rock told a group of GMC dealers and factory personnel at the Specialty Equipment Marketing Association meeting here that in every Western nation, there are more vehicles than drivers.

In the United States alone, he said, the market has gone from production capacity restraints creating demand stronger than supply to today's overcapacity of 2 million vehicles a year.

"At the same time, the overall personal vehicle market will have gone from a choice of 90 nameplates back in the 1950s to a choice of more than 750 nameplates by the end of the 1990s," he said. "Importantly, these are all good nameplates, all worthy opponents."

Because quality throughout the industry has advanced to the point where virtually all the vehicles available are good, Rock said, the buyer today is faced with unprecedented choice and confusion.

"The need to find new ways to reach this confused buyer has led to the continuing development of niche marketing and even micro-niche marketing," he said.

"In other words, we are to the point in some American metropolitan areas where a hot-selling vehicle in one part of town may be flat in another. Obviously, no volume manufacturer will be able to fine-tune his products on a neighborhood basis. And all this is happening with greater and greater speed, like the fashion market."

GMC's approach to niche marketing, Rock said, is to produce the strongest, most solid trucks possible and then work with the aftermarket to develop the niche vehicles that will connect with buyers in those very specialized markets.

"This strategy is viable because only in the the aftermarket can you find the variety of special focus products necessary to fill the niche-market buyer needs," Rock told the aftermarket and factory personnel. "The aftermarket is the only place that can react quickly enough to market conditions."

Quoting a Specialty Equipment Marketing Association survey, Rock noted that specialty parts and accessories for customizing cars and trucks now account for approximately 10 percent of the total vehicle parts replacement market, or about $7.2 billion a year.

The association estimates that the typical car or truck customizing enthusiast spends more than $2,500 a year for specialty parts, accessories or services.

GMC Truck's ultimate goal, Rock said, is to distinguish the division's dealers and their products from their competition — "to help them stand out from the crowd."

"A key element of this approach is what we call 'In-Dealership Accessorizing,' " Rock said. "At the time a customer orders a light truck or van, dealership personnel will assist in specifying accessories and services to customize that vehicle to the customer's individual and personal tastes.

"This plan won't be limited strictly to new-truck orders," he said.

"It will also make each dealership a truck headquarters, the best source for owners who want to personalize light trucks and vans they already own."

To assist GMC Truck dealers in that activity, a catalog of specialized parts, accessories and services for truck customizing is being distributed to each of the division's 2,400 dealerships.

The program, Rock said, is vital if GMC Truck and its dealers are to respond to the opportunities for growth in all segments of the truck business.

The intense and growing competition means that no truck company is on "easy street."

LEGAL BRIEFS

U.S. high court protects lemon law rights in Alabama

By Helen Kahn
SENIOR CORRESPONDENT

WASHINGTON — By refusing to review an Alabama Supreme Court decision, the U.S. Supreme Court has preserved the lemon law rights of consumers in that state.

The Alabama law allows consumers to take a manufacturer and/or dealer to court over alleged defects, even if the consumers have signed a sales contract with a binding arbitration clause.

In 1987, Jack and Juanita Warren of St. Clair County, Ala., bought a car from Jim Skinner Ford of Birmingham, Ala. A clause in the sales contract said that in any disputes that may arise, the dealer and the customer agree to binding arbitration pursuant to the Federal Arbitration Act.

When the Warrens, concerned over repair problems, sued Ford Motor Co., First Alabama Bank of Birmingham and Jim Skinner Ford for breach of contract and for warranty failure, the dealer moved to stay because of the arbitration law. The trial court agreed.

The Warrens then moved to change the court order. Ford Motor Co. intervened to stay the proceedings pending arbitration. The trial court agreed with Ford and denied the Warrens' move. In July 1988, the Warrens took the issue to the Alabama Supreme Court.

The state's high court overturned the lower court. The majority found that even though Jim Skinner Ford was a Delaware corporation, its main place of business was in Alabama, the Warrens were state residents, the sale occurred in Alabama and was pursuant to a contract entered into and executed in the state and all obligations expected from it were to be handled solely within the state.

Judge rebuffs GM stand in lemon law dispute

A federal judge in Philadelphia turned down a bid by General Motors to cancel lemon law arbitration with an owner who said her 1987 Chevrolet Celebrity was not fixed satisfactorily in 13 tries.

Anne Marie Lynn sued GM, seeking a refund of the vehicle's adjusted purchase price or a replacement. She also sought damages and attorney's fees.

GM said damages were beyond the scope of arbitration and must be settled by a trial court. GM noted it had offered to buy back the car.

Lynn said she disagreed with GM's calculations for the buyback. She claimed GM was trying to frustrate her right to a jury trial.

U.S. District Judge Louis H. Pollak, noting that GM's offer to repurchase did not include consequential damages, said Lynn "should have the opportunity to present evidence of any consequential damages to a trier of fact." He added that the issue of calculations of the repurchase price should also be submitted to the arbitration panel.

FTC says 4 dealerships violated use-car rule

WASHINGTON — The Federal Trade Commission has charged four Tennessee used-car dealers with several violations of the commission's used-car rule.

The FTC said the dealers didn't post window stickers giving warranty data and other customer information. They also were accused of failing to warn buyers not to rely on salesmen's promises and of their right to an independent mechanic's inspection.

McManus-Wilson Motors of Knoxville has agreed to a civil penalty of $15,000 to settle the charges. Supreme Motors of Nashville agreed to settle for $12,500. Neither dealership admitted violations, but they are barred from future transgressions. Both settlements await approval in federal court.

G&H Used Cars and Olympic Motors, both of Nashville, await a decision from the U.S. District Court.

November shop business exceeds year ago by 3.8%

By Francis J. Gawronski
AUTOMOTIVE NEWS STAFF REPORTER

Service and parts business in new-car dealerships in November topped the volume recorded the previous year for the second consecutive month.

According to the Automotive News Service Index, November's shop business climbed 3.8 percent over the the volume for November 1988. Shop volume in October was up 2.5 percent over the year-earlier business.

Service and parts business for the first 11 months of 1989 increased 1.9 percent over the business recorded in the same period in 1988.

The service index is compiled from figures on parts and service business supplied by a cross-section of new-car dealerships across the nation.

SERVICE INDEX
103.8*

	Nov. '89 vs. Nov. '88	Jan.-Nov. '89 vs. Jan.-Nov. '88
Gross Profit on All Labor and P&A Sales	+3.6%	+3.0%
Repair Orders Written	−0.2%	−1.9%
Total Labor Sales (Customer & Warranty)	+5.0%	+2.4%
Shop Parts Sales (Customer & Warranty)	−2.4%	+1.1%
Sales of All P&A	+3.0%	+1.0%

* Survey by Automotive News shows that dealers' service and parts business in November 1989 was 103.8 percent of business in November 1988. Service business in the first 11 months of 1989 was 101.9 percent of business in the corresponding period in 1988.

Total labor sales (customer-paid and warranty), the leading indicator in November, were up 5.0 percent over the year-earlier month and were up 2.4 percent for the 11-month period.

Gross profit on all labor, parts and accessories — the most important indicator from the dealers' viewpoint — climbed 3.6 percent in November and 3.0 percent for the year to date.

The only other indicator registering an increase for the month was sales of all parts and accessories at 3.0 percent ahead of the year-ago volume. Parts and accessories sales for the year were up 1.0 percent, according to the index.

Indicators showing declines in November were shop parts sales (customer and warranty), down 2.4 percent, and repair orders written, down 0.2 percent. For the year, shop parts sales were up 1.1 percent, while repair orders declined 1.9 percent from the year-earlier volume.

'90 Yugo Cabrio ragtop goes on sale; automatic planned

By Jim Henry
AUTOMOTIVE NEWS STAFF REPORTER

DETROIT — Yugo America has begun importing its long-awaited convertible, which will be sold as a 1990 model.

Also for 1990, Yugo will offer one other model, the GV Plus, in one trim level. Three trim levels had been offered previously.

Yugo America hopes to sell about 20,000 cars in 1990, including 5,000 to 6,000 convertibles, said John Spiech, president and chief executive officer. Sales in 1989 totaled 10,576 units.

The Cabrio began arriving in December but availability is limited to Southern states until this spring, Spiech said. The GV Plus is due to go on sale in February.

The Cabrio lists for $8,990 with standard features including a power-operated top and a glass rear window with defroster.

The GV Plus lists for $4,435. Like the Cabrio, the GV Plus carries a 1.3-liter, four-cylinder engine with a five-speed transmission. The GV Plus has multi-port electronic fuel injection, making it the first fuel-injected Yugo. The Cabrio is carbureted.

Yugo America plans to offer a Renault-built, three-speed automatic transmission on both cars later this year, Spiech said.

Prices on the three 1989 GV models ranged from $4,349 for the basic GV with a 1.1-liter engine to $5,699 for the GVX, which had the 1.3-liter engine.

The Cabrio was supposed to have been a 1988 model, but the car was delayed by design and quality problems as well as the financial difficulties that drove Yugo America into bankruptcy a year ago.

The previously independent distributor emerged from bankruptcy last month as a subsidiary of Yugoslavian manufacturer Zavodi Crvena Zastava.

At the recent North American International Auto Show in Detroit, Yugo held its first formal press conference since going bankrupt. Yugo abruptly withdrew from the previous Detroit show, but the company was back with a modest exhibit for the 1990 exhibition.

The GV Plus is the first fuel-injected Yugo.

YUGO FOR 1990

Model	Wheelbase (inches)	Length (inches)	Width (inches)	Height (inches)	Curb Weight (pounds)	Base engine	Drive type	Body styles
GV Plus Hatchback	84.6	139.0	60.7	54.1	1,870	1.3-liter I-4	fwd	3-dr.

By Bill Vance
SPECIAL CORRESPONDENT

TORONTO — New car and truck sales in Canada declined in November, as sales of domestic-built vehicles fell and imports increased.

Total Canadian sales — car and truck, import and domestic — decreased 6.93 percent for the month. On a year-to-date basis, they are down 4.34 percent.

On the domestic car side, Ford of Canada suffered the most, off 25.68 percent from a record November 1988.

Chrysler Canada and General Motors of Canada were also down, by 18.02 and 11.38 percent, respectively. Year-to-date domestic car sales were off 9.02 percent.

Imported cars — including those offered by the Big 3 as well as import companies — continued to buck the overall trend of falling sales. The three biggest monthly gainers in import car sales were Ford, up 75.90 percent; Chrysler, up 35.83; and GM up 34.57. Honda, Nissan and Suzuki also made strong improvements, contributing to a 6.69 percent overall increase in import sales for the month. For the year, sales of car imports were up 2.7 percent.

Light trucks followed a similar pattern: domestics down and imports up. Domestic trucks sales declined for each of the Big 3, although by just 10 units at Chrysler and 94 at Ford. The total monthly decrease was 4.88 percent, compared to a year-to-date loss of 6.50 percent.

Imported models, paced by Mazda, GM and Suzuki, enjoyed a monthly gain of 16.82 percent. On a year-to-date basis they are up 32.44 percent.

Total truck sales were down 1.79 percent for the month and 2.19 percent for the year.

Sales famine fattens car stockpile

By Phillip Martha
AUTOMOTIVE NEWS STAFF REPORTER

New-car inventories and days'-supply figures rose in December even though eight assembly plants closed, the Big 3 bolstered their rebate programs and dealers' continued efforts to curb orders and cut their car supplies to the bare bones.

December's dismal sales pace pushed stocks and days' supply of domestic and imported cars beyond what is considered normal for the beginning of the year. New-car sales in December plunged 21.40 percent below December 1988.

Automakers and dealers paid dearly for late summer incentive excesses that robbed sales from the last three months of 1989.

In the final quarter, car sales never recovered from 1989's strong third-quarter performance. In every one of the nine 10-day sales periods in the fourth quarter, domestic sales lagged behind 1988 periods. Total domestic and import car deliveries plummeted nearly 340,000 units or 16.75 percent below the final quarter of 1988.

U.S. and import carmakers and dealers began 1990 with a bulging 90-day supply of new cars, up from an already-inflated 83 days on Dec. 1. A year ago, U.S. and import car stocks equaled a nearly ideal 67 days.

A 92-day domestic car supply was the highest for any Jan. 1 since 1984, which began with a 107-day supply of unsold cars. An equally bloated 86-day import car supply was the fattest since 1982, when *Automotive News* started tracking import stocks.

There was no recovery in retail sales during the last month of 1989, and dealers told *Automotive News* that they were keeping 30- to 45-day supplies and were not placing orders.

After last month's "disastrous sales," Bob Karlin, owner of Santa Monica (Calif.) Ford, said he was keeping a close watch on stocks and had a 30- to 45-day supply of cars.

"We're not buying anything — sales have been poor in all our stores and traffic is down," said Ed Walker, owner of Porsche, Audi, Subaru, Dodge, Volkswagen, Suzuki, Jeep-Eagle and Pontiac dealerships in Pittsburgh.

Greg Penske, vice president and new-car general sales manager at Longo Toyota in El Monte, Calif., said the largest U.S. Toyota store has a 30-day supply and is "right where we want to be according to plans for 1990."

On Jan. 1, combined stocks of import and U.S.-built cars totaled 2,333,110. That was up 53,049 units or 2.33 percent from Dec. 1.

Stocks of unsold U.S.-built cars numbered 1,669,374 on hand Jan. 1, just 10,871 more than on Dec. 1. But the Jan. 1 total was a 92-day stockpile vs. 88 a month earlier.

During December, import-car stocks grew to 663,736, up 42,178 units or 6.80 percent, for a hefty 86-day supply. Last month began with a 74-day supply.

Although the actual number of unsold cars grew slightly in December, the weak daily selling rate last month severely inflated days-supply statistics.

One year ago, there were more import cars in stock, but a faster daily selling rate yielded a lower 66-day supply.

Four of the eight companies that build cars in the United States reported over 100-day supplies of domestic and import autos on Jan. 1. Including captive imports, Chrysler Motors and General Motors reported supplies above 100 days. Ford Motor Co.'s days' supply was 98 days.

Two of the five transplants also topped 100-day supplies of U.S.-built and imported cars because of sluggish December sales.

In spite of sales gains in calendar 1989, Nissan began the year with more than five months' — 148 days — worth of cars in stock, transit or at ports.

Mitsubishi's refused to disclose its inventories of imported and U.S.-built cars. *Automotive News* estimated that on Jan. 1, it had a 219-day supply.

The other transplants — Honda, Toyota and Mazda — reported fatter combined car stocks than on Dec. 1. Honda began the month with a slim but higher 35-day supply. Toyota's total rose slightly but its days' supply dipped to 44, down 4. Mazda's 71-day supply was the same as on Dec. 1.

Bruce expects Infiniti sales to improve

By Jesse Snyder
AUTOMOTIVE NEWS STAFF REPORTER

CARSON, Calif. — Infiniti insists it is not disappointed in early sales results but promises they will improve in the months ahead.

In the Nissan luxury division's first seven weeks of business, sales totaled 1,723 cars — 1,072 Q45s and 651 M30s. If taken as a single reporting period, the Nov. 8-Dec. 31 total works out to 34 cars for each of the 50 dealers open at the outset, said William Bruce, Infiniti general manager.

"That's about right on," Bruce said. "By yearend, we'll be averaging 40 a month for each dealer."

That is the closest Infiniti has come to publicly announcing a sales goal. Bruce has insisted all along Infiniti should not be judged on the basis of sales alone and that the division has a lower sales target than Toyota's Lexus luxury division, which opened Sept. 1.

The math for Infiniti works out to roughly 30,000 units for 1990, or half the recently lowered Lexus 1990 goal of 60,000 sales. Averaging 40 cars a month, the initial 50 dealers would account for 24,000 units. Additional sales would come from another 20 or so dealers scheduled to open this year.

Officials in Japan have indicated that U.S.-bound production of the M30 and Q45 would be about 32,000 units for the year.

Infiniti has sold 1,072 Q45s in its first seven weeks of business.

"A lot of people are wringing their hands because Infiniti is only selling at a third the level Lexus is, but Infiniti never intended to sell as many as Lexus," said George Peterson, president of the AutoPacific Group, a Newport Beach, Calif., consultancy.

"If they sell half as many as Lexus, they'll be successful in their own minds."

But Infiniti and its dealers will have to work hard to reach Bruce's sales-per-dealer target, said Christopher Cedergren, senior analyst at J.D. Power and Associates, Agoura Hills, Calif.

"The whole luxury car market is slowing down a bit," Cedergren said. Between the general economy and two new Japanese competitors, it's increasingly a buyers' market for luxury cars, he noted.

One surprise in the early report is that sales of the M30 entry-level coupe are running better than anticipated, at 38 percent of total sales. Officials in Japan had said the M30 would account for about one-third of production.

Lexus is struggling to boost sales of its entry-level model, the ES250 sedan. Despite new advertising that focuses directly on the car, some dealers are starting to deeply discount the smaller sedan.

While Lexus expects to sell its original target of 40,000 LS400 models in 1990, it will sell only 20,000 ES250s, not the original target of 30,000, said J. Davis Illingworth, general manager.

In 1989 Lexus sold 16,302 cars — 11,574 LS400s and 4,728 ES250s.

GM

FROM PAGE 2

1991 and 1992 model year programs are safe.

Programs under scrutiny are for the 1993 model year and beyond. Of those, high-volume, high-profit margin and low-investment programs are being protected.

The 1993 Buick Century and Oldsmobile Ciera program, high-volume cars in the bread and butter mid-size segment, are among the protected programs.

Those in jeopardy are niche vehicles that generate low volumes and no significant market share gains. Cadillac, for example, recently scrapped its LSS concept, an all-new model that was to compete against European and Japanese luxury models. An Oldsmobile exclusive model planned for 1995 was pushed back a year to 1996.

Minor year-to-year cosmetic redesigns also are being dumped.

GM will reinstitute programs to reduce the salaried workforce in North America which totals 107,000 people. The same programs were in effect from January to April 1988 and resulted in the cut of 40,000 jobs from mid-1986 to April 1988.

GM said no targets for headcount reduction have been set. But, late last year, an internal study indicated that GM could cut headcount by up to 5 percent annually over an unspecified timeframe.

Employees under age 53 will receive special payments to leave the company based on their length of service. The program is in effect from March 1 to June 30.

Employees 53 and older will be eligible for an early retirement incentive. Payment is based on length of service. The early retirement provisions are in effect from April 1 to September 1. Both programs require mutual agreement by employee and management.

EPA may cut hydrocarbons in gas-fueled vehicles

WASHINGTON — The EPA has proposed a rule that would reduce hydrocarbon vapors that escape from gasoline-fueled vehicles.

The EPA said the proposal would cut emissions of volatile organic compounds — a form of hydrocarbon that contributes to smog — from cars and light and heavy trucks by 5 percent.

To comply, manufacturers would most likely use larger charcoal canisters to capture more of the vapors and make changes that would more efficiently channel the vapors to the engine, the EPA said. The changes would add about $10 to the price of a new vehicle.

The EPA said the proposed rule would affect evaporative emissions from vehicles that are running or that are parked for more than a day.

The EPA proposes to remedy both problems by revising test procedures used to certify all vehicles.

Following publication of the proposal, the EPA will hold a public hearing and then allow a 30-day public comment period.

Automakers expand, revise incentives

By Arlene Sawyers
AUTOMOTIVE NEWS STAFF REPORTER

Several automakers and importers started the new year by adjusting, expanding or discontinuing their incentive programs.

Chrysler Corp. dropped the $250 dealer incentive on its 1990 minivans and expanded its "Guaranteed Rebate" program to customers to include 1990 Plymouth Sundance and Acclaim; Dodge Dynasty, Shadow and Spirit; and Chrysler New Yorker Landau and Salon models.

Retail purchasers or leasees taking delivery by Jan. 31 are eligible for a rebate of $1,000. If a higher rebate is offered on those vehicles by Sept. 30, Chrysler will pay the customer the difference.

Also, Chrysler increased the customer rebates on 1989 Dodge Shadow, Spirit and Dynasty; Chrysler New Yorker; and Plymouth Acclaim and Sundance models to $1,000.

Special finance rates ranging from 6.9 percent to 9.9 percent are available in lieu of rebates. The program runs indefinitely.

Ford Motor Co. increased the customer cash rebate on its 1990 Lincoln Continental from $1,000 to $1,500 and added the 1990 Lincoln Mark VII to the program. The offer ends March 31.

Also, Ford dropped some vehicles from its dealer incentive program that expired Jan. 9 and extended the program on others. Still included are the 1989 Ranger, $250 to 750; 1989-90 Taurus SHO, $500; 1990 Ranger, $250; and 1989-90 Bronco II, $250. The dealer rebates end Feb. 5.

Dealer incentives on Chevrolet cars and trucks, Pontiac cars and GMC Trucks have expired.

Dealer incentives on all Buicks except 1989 and 1990 Reatta, Riviera and Park Avenue Ultra also have expired. The Oldsmobile dealer rebates on 1989 and 1990 vehicles continue until Feb. 2.

Toyota Motor Sales U.S.A. announced a new dealer incentive program to replace one that ended Jan. 3. Rebates on Tercel, Camry and Corolla are $400 to $1,200 on 1989 models and $100 to $800 on 1990 models. The payment to dealers is $2,000 on 1989 Supras. Truck rebates to dealers are: 1990 4x4 pickup, $300; all 1989 and 1990 4x2 pickups except the base model, $600; 1989 and 1990 base model 4x2 pickup truck, $1,000; 1990 4Runner, $600; and 1989 cargo/panel and passenger vans, $3,000. Toyota's dealer incentive program expires Feb. 2.

Nissan Motor Corp. in U.S.A. is offering dealer incentives on several vehicles: 1988 and 1989 Pulsar NX, $2,000 in California and $1,000 elsewhere; 1988-90 Sentra and pickups, up to $1,000, varying by region; 1988-89 Pathfinder, $500; and 1990 Axxess, $1,000.

Peugeot Motors of America announced factory-to-dealer cash incentives on all 1989 and 1990 cars. Dealers earn $1,000 to $2,000 per car depending on the number of cars sold. The Peugeot program runs indefinitely.

Subaru of America adjusted its dealer and customer cash incentive programs. The 1989 XT and XT6 carry a $1,000 to $3,000 rebate, which goes to the customer in some regions and to the dealer in others.

The $200 dealer cash payment on the 1989 Justy ECVT has been extended, and a $1,000 customer rebate has been added to that car. All other 1989 Justy models carry a $500 customer rebate.

Suzuki of America announced the following customer rebates on 1989 vehicles:

Samurai, $1,000; Swift GT, manual transmission, $1,000; Swift GT, automatic, $2,000; Swift GA, California only, $500; Swift GLX, $1,000; Sidekick JA, $500; Sidekick JX, softtop, $2,000; Sidekick JLX, softtop, $3,000 in California and $2,000 elsewhere; Sidekick JX hardtop, $3,000 and Sidekick JLX, hardtop, $3,000.

Suzuki dealer incentives include the 1990 Swift GA, $400; 1990 Sidekick JX, softtop, $700 (softtop) and $1,500 (hardtop). The Suzuki programs expire March 31.

Volkswagen of America discontinued its cash-to-customer program on 1989 models and is now offering that cash exclusively to dealers on remaining 1989 cars and Vanagons.

Rebates are: Fox, $600-$1,000; Golf, $1,000; Golf GL, $1,200; GTI, $2,000; base Jetta, $1,000; Jetta GL, $1,500; Jetta Diesel, $1,500; Jetta Wolfsburg, $2,000; Jetta Carat, $2,000; Jetta GLI, $2,500; Cabriolet, $1,000; Vanagon, $3,000; and Vanagon Camper, $4,000.

Hyundai Motor America is offering its retail customers $500 on 1989-90 base Excels; $750 on 1989-90 Excel GL and GS; and $1,000 on 1989-90 Excel GLS. Hyundai dealers get a rebate of $500 on each 1989 Excel. Customer and dealer programs expire March 5.

Sterling Motor Cars is offering a $5,000 retail rebate on 1989 cars through March 31.

PRODUCTION

Output blues spread to transplants

By Kathy Boyer
AUTOMOTIVE NEWS STAFF REPORTER

Along with the 38 Big 3 assembly plants that have been or will be temporarily idled this month, one transplant and one joint-venture company will also scale back output.

Mazda Motor Manufacturing (U.S.A.) Corp. will trim its schedule later this month from 62 cars per hour to 55 per hour. Mazda will place workers in training programs instead of laying them off.

Also, Diamond-Star Motors, a joint venture between Chrysler Corp. and Mitsubishi, has eliminated overtime and plans to make minor line speed cutbacks this month.

Last week's scheduled auto production of 48,551 jumped 24.48 percent from the prior week but fell 66.83 percent from the year-ago week.

Last week's estimated production was split as follows: Ford Motor Co., 25.01 percent; Honda of America Manufacturing, 15.26 percent; General Motors, 14.79 percent; Toyota Motor Manufacturing U.S.A., 8.85 percent; Mazda, 8.85 percent; New United Motor Manufacturing Inc., 8.44 percent; Chrysler Motors, 7.00 percent; Diamond-Star Motors, 5.75 percent; Nissan Motor Manufacturing Corp. U.S.A., 4.90 percent; and Subaru-Isuzu Automotive, 1.15 percent.

Truckmakers planned production of 31,391 units last week, 12.39 percent below the previous week and 63.89 percent below the year-ago week.

All assembly plants are idle today in observance of Martin Luther King Jr. Day.

Ford extended the holiday for the remainder of the week at its Edison, N.J.; Lorain, Ohio; and St. Louis plants.

Chrysler's St. Louis No. 1 and Sterling Heights, Mich., plants are idle this week. The company's Warren, Mich., plant will be closed Jan. 22 to Feb. 5 because of sluggish sales.

Chrysler will shut down its Belvidere, Ill.; Toledo, Ohio; and Newark, Del., facilities Feb. 5 for one week to adjust inventory.

GM facilities that are closed until Jan. 22 due to poor sales are: Lansing, Mich., Grand Am line; Shreveport, La.; Flint, Mich.; Baltimore; Pontiac West in Pontiac, Mich.; Bowling Green, Ky.; Doraville, Ga.; and the Fairfax plant in Kansas City, Kan. The Van Nuys, Calif., plant will be closed until Feb. 5.

Canadian cars far behind '89

Canadian automakers targeted production of 10,525 cars last week, more than double the prior week's total but 44.21 percent below the year-ago week.

So far this year, 14,571 cars have been built, 53.50 percent below last year's tally at this time.

Truck output was scheduled at 11,224 units last week, 0.18 percent below the previous week and 41.56 percent below the year-ago week.

Pentagon cutback no Big 3 calamity

By Diana T. Kurylko
AUTOMOTIVE NEWS STAFF REPORTER

WASHINGTON — Automakers and suppliers involved in defense work will lose business as Pentagon spending declines during a new era of peace and arms control.

But the No. 2 man at the Pentagon said the losses are unlikely to be painful.

The Big 3 no longer make the tanks, heavy artillery and sophisticated weapons systems that are most at risk, said Donald Atwood, the former General Motors vice chairman who became deputy secretary of defense under President Bush. Atwood, 65, is credited with making GM one of the top 10 defense contractors through the purchase and operation of Hughes Aircraft Co.

Chrysler Corp. and Ford Motor Co. have put their defense operations on the block. Their operations are minuscule compared with GM's.

General Motors is the seventh largest defense contractor, with contracts valued at $3.55 billion for fiscal 1988, the latest figures available from the Pentagon. The biggest part of GM's defense business is Hughes Aircraft Co., acquired in 1985 for about $5 billion in a bidding war with Ford.

Despite the fading threat of the Warsaw Pact and Soviet Union, U.S. armed forces will continue to need conventional vehicles, which all three automakers can provide, Atwood said.

He sees defense electronics as a growth area for GM and Hughes as well as for Ford Motor Co.'s Ford Aerospace subsidiary.

Atwood considers defense electronics a growth area for GM Hughes and Ford Aerospace

RANDY SANTOS

Ford tries to sell Aerospace, Page 45

Their expertise in the area would be needed in the next 10 to 20 years," Atwood said in an interview.

"I foresee that Hughes has a tremendous research and development capability, which would still be a major player. Ford Aerospace and its BDM subsidiary are viable organizations that would continue to do research and development activity for the Department of Defense," Atwood said.

Lawrence Korb, assistant defense secretary from 1981-85, said that because the auto companies are defense subcontractors, "they really won't be hurt much at all."

Korb predicts a 5 percent loss in automakers' government contracts.

He is sympathetic with Ford and Chrysler management: "If defense is not your main business, it would be a good idea to get out now."

In the long term, reductions in defense spending could help the auto industry, said Christopher Caton, director of forecasting for DRI/McGraw-Hill. Defense cuts through 1994 would lower the federal deficit enough for interest rates to drop 1.4 percentage points. The lower cost of borrowing would increase car sales 2.9 percent in 2000, Caton said.

Politicians and academicians versed in the give-and-take of defense budgets predict that big-bucks weaponry, such as the $500 million-a-copy B-2 Stealth bomber, will take the first hits.

Among the Big 3, only GM stands to lose if those big projects go down. It won the contract to build the engine for the $20 mil-

Jury slams Toyota over allocations

By Charles M. Thomas
AUTOMOTIVE NEWS STAFF REPORTER

A Missouri jury has landed another blow to the controversial turn-to-earn allocation system with a $5 million award to Fred Angle, an ex-Toyota dealer from Kansas City. The formula is used by many automakers to dispense cars to dealers.

Toyota Motor Sales U.S.A. says it will challenge the award given to Angle. The jury ruled the company had driven Angle's Toyota dealership out of business by purposely shorting its allocation of cars.

Angle, owner of Fred Angle Nissan, also in Kansas City, declined comment on the verdict handed down Jan. 12 in Clay County Circuit Court.

But his lawsuit focused on the turn-to-earn system, showing it can be used not only to reward dealers but also to punish them.

"Turn-to-earn" allocation systems, used by most domestic and import automakers, are based on the idea that dealers with high turnover get relatively more cars when there are product shortages. The jury ruled Toyota had misused the system to cut his allocation to six cars a month and drive Angle out of business.

Toyota declined comment on

Chrysler to reduce sales of Mitsubishi cars, trucks

By Mary Connelly
AUTOMOTIVE NEWS STAFF REPORTER

DETROIT — Chrysler Motors will rely less on Mitsubishi Motors in 1990, importing and selling 37 percent fewer vehicles built by its Japanese partner than in 1989.

The cutback to 85,000 vehicles is the result of slackened product demand, diminished per-unit profits and reduced dependence on Mitsubishi by Chrysler.

The reduction in Chrysler Motors orders will probably force Mitsubishi Motors to cut production in Japan, a Mitsubishi spokesman said.

Mitsubishi also is expected to try to export to other global markets and to sell more Japanese-built units through Mitsubishi Motor Sales of America.

Michael Hammes, Chrysler Motors vice president of international operations, said the chief reason for the drop in 1990 Mitsubishi car volume is the softening of the U.S. auto market.

The decline in truck units is due to both a weakened U.S. industry and weak profit margins in the lower end of the pickup truck market, Hammes said.

He said Chrysler's dependence on Mitsubishi is waning as the U.S. company develops more globally competitive products. The cutback in Japanese units also reflects Chrysler's desire to use its marketing muscle — and money — to develop its own brand images. And it reflects a weakening of the yen against the dollar, which has put pressure on Mitsubishi's profitability.

Hammes said he expects built-up import volumes to decline further in the future, although the most recent series of negotiations covered only 1990.

"As we get more competitive with the Japanese — and we are a lot more competitive with them — our use of Japanese products is going to keep declining," he said. "I do not see the relationship of imported vehicles growing. I see it declining over time. But that is not a surprise to Mitsubishi, ourselves or anybody else."

Chrysler and Mitsubishi Motors recently concluded 18 months of contract negotiations under which Chrysler in the 1990 calendar year agreed to sell an estimated 70,000 Mitsubishi cars and 15,000 Mitsubishi trucks.

Chrysler in 1989 sold 95,000 Mitsubishi cars and 40,000 Mitsubishi trucks. As recently as 1986, Chrysler retailed 220,000 Mitsubishi-built units annually, which was its peak year.

Chrysler will also cut its 1990 purchases of Mitsubishi-built V-6 engines to 485,000 units, down from 520,000 engines in 1989. Chrysler introduced its own V-6 last year.

New year brings sales upturn; cars, trucks up

By Charles M. Thomas and Philly Murtha
AUTOMOTIVE NEWS STAFF REPORTERS

Economists and analysts have predicted slow sales for the first six months of the year. But apparently somebody failed to tell the customers.

A new round of incentives and warmer weather helped improve sales and shave bloated inventories in early January as U.S. car and light-truck makers reported a 45.50 percent surge over last year's slow Jan. 1-10 period. General Motors was the big gainer.

Chrysler minivan sales soar, Page 48

The rise in the daily selling rate was 27.32 percent because this year's period had eight selling days, one more than last year's. Last year's first 10 days were sluggish because rebates were scarce and there was payback from strong holiday sales in De-

see SALES, page 48

Another Europe record:
Car sales rose 4 percent for 1989, to a record 13.4 million units, despite predictions a year earlier of a softer market. VW crossed the wire with 2 million cars; Fiat was a nose behind. Page 3.

Hopes fade for saving Omni/Horizon, Chrysler Detroit plant

By Kathy Jackson
AUTOMOTIVE NEWS STAFF REPORTER

DETROIT — The UAW still has a glimmer of hope that Chrysler's Jefferson Avenue plant here can be saved with limited production of the Plymouth Horizon and Dodge Omni, but the prognosis is not good.

At a meeting with UAW officials last week, Chrysler Motors executives said they would consider the UAW proposal to market a barebones model in areas where the cars sell well, but the company was not too optimistic.

"We will take a look at it," said Chrysler spokesman Lee Sechler. "But we don't hold out a great deal of hope."

The plant is scheduled to close Feb. 2 when Omni/Horizon production ends.

A union proposal to produce minivans at Detroit Jefferson also was turned down by the company because of high costs to retool the plant.

"It's probably too late to turn (the plant) around, but they said they would check with the marketing department to see what could be done with the Omni and Horizon," said Frank Monaghan, president of UAW Local 889, which represents the secretarial force at Jefferson.

Monaghan said another meeting is scheduled for this week. In addition, he said UAW President Owen Bieber and Chrysler Corp. Chairman Lee Iacocca will meet Jan. 30 on the issue. Bieber also is a Chrysler director.

The union wants to produce an Omni/Horizon model that would retail for about $6,000 and basically target first-time buyers. Research by the union shows there is such a market.

Sechler said that when the decision was made in November to close the plant, it was producing 470 cars a day but sales were averaging just 230 a day.

On Jan. 1, the company had a 161-day supply of Horizons and a 142-day supply of Omnis.

Ninety percent of the dealers queried by the union blamed the autos' demise on poor marketing and styling.

"We need a $6,000 automobile," said Clayton Smith, a salesman at Lochmoor Chrysler-Plymouth in Detroit. He said the imported Colt will be the only low-priced model that Chrysler can offer after Omni/Horizon production ends, "but many people want to buy American."

A survey by the union showed the cars sell well in industrial towns such as Detroit. Smith said that when Chrysler offered rebates on the Horizon last fall, "we almost sold out of them."

Said Joe Asterpaul, new-car sales manager at South Bay Chrysler-Plymouth in Torrance, Calif.: "The car has looked the same since 1980. I've shown it many times to young people, and they just laugh at me."

Union leaders said Chrysler will also consider their proposal to allow unionized engineers, production and secretarial workers to perform all interim jobs that are needed as the company prepares for the scheduled 1992 opening of the new Jefferson plant.

2-million seller tops Europe's record year

By Richard Johnson
AUTOMOTIVE NEWS STAFF REPORTER

FRANKFURT, West Germany — In 1989, at least one carmaker became the first ever to sell more than 2 million autos in Western Europe in a year.

Chrysler expands in Europe, Page 49

There is still some debate as to which it was. Volkswagen Group finished first in the European sales rankings for the fifth straight year, according to industry estimates compiled by Automotive News — surpassing 2 million sales and achieving a 15 percent share of the market.

Other independent sources give the top spot to VW, though Fiat is challenging the outcome and claiming that it finished ahead of its West German rival.

European new-car sales were expected to decline in 1989, but instead set a record. But the long-expected downturn may be at hand as sales in Europe dropped in December.

Official tabulations from the 17 Western European markets will not be complete for a few months, but Automotive News estimates show sales totaled 13,447,600, a 4 percent increase over 1988, the previous record.

Sales in December slipped 11 percent to 820,300, impacted by declines in France and Great Britain. But the size of the French decline is uncertain because of a strike of civil service employees that resulted in a number of new-car sales going unregistered.

General Motors was the Europe's

Stage set in Senate for clean-air battle

By Arthur Flax
AUTOMOTIVE NEWS STAFF REPORTER

WASHINGTON — The fight to pass clean-air legislation will move to center stage in the Senate this week, and the auto industry will be doing all it can to alter its course.

The industry will have to act fast. Environmentalists are pushing for a clean-air bill to be signed April 22, the 20th anniversary of Earth Day. Other government observers predict a bill will be signed by President Bush by midyear.

But the bill in the Senate — particularly its tough tailpipe emissions standards — has the potential to force changes in the size, shape and availability of cars and trucks, industry officials say. And that has domestic makers, importers and their dealers up in arms.

"The Senate bill is our worst nightmare," said Timothy MacCarthy, director of federal liaison for the Motor Vehicle Manufacturer's Association. "Taken as it is written, it would totally affect the auto industry and the products we produce."

The auto industry is not against new clean-air legislation. It expressed guarded support for Bush's clean-air proposal when it was introduced last year. And it backs the clean-air bill — again guardedly — as it is has been amended in the House of Representatives.

The tailpipe emissions provisions of that bill are virtually locked in by an agreement between the two adversarial leaders of the House debate, Rep. John D. Dingell, D-Mich., and Rep. Henry A. Waxman, D-Calif. They have agreed to a package of emissions controls that mirror those set to take effect in California and eight Northeast states in 1993.

Further House debate is anticipated over alternative fuels.

But the action in the House is likely to start later this year, following the Senate action.

To combat the momentum in the Senate, the MVMA is planning a major media campaign.

A General Motors spokesman said the automakers may place advertisements in major newspapers. The ads will essentially say the Senate measure will cripple indus-

Informality seeps into Japanese management

Nissan leads way in new approach

By Mary Ann Maskery
AUTOMOTIVE NEWS STAFF REPORTER

TOKYO — Nissan Director Kiyofumi Morimoto remembers his first board meetings at Nissan Motor Co. Only the top executive spoke. The rest were silent.

After 27 years in government, before joining Nissan in 1981, Morimoto was struck by the lack of communication in the corporate world.

But in 1985, there was a break in the hushed, rather autocratic formality that characterized Nissan's corporate style. Yutaka Kume became president and, in his inaugural speech, instructed employees to call him by his name, not his title.

Kume "opened a door," Morimoto said. Since then, employees have been encouraged to speak up; women staffers no longer have to wear uniforms; and salaries are based on ability and performance, not just seniority. Written and unwritten strictures have fallen rapidly. Morimoto calls the developments "drastic."

Now, other companies are coming to Nissan for advice, because they recognize not only a change in management style at Nissan, but also a greater spontaneity in the company's product development as a result. Both Mazda Motor Corp. and Isuzu Motors Ltd. have approached Nissan executives for tips on how they did it.

Toyota Motor Corp., while not acknowledging any influence from Nissan, has recently introduced its own reform program.

This rush to shake off what has been a traditional style of Japanese management may seem unusual to Westerners accustomed to the continual praise of Japanese management techniques. But there is a distinction between management in the factory and management in the head office.

On the plant floor, Japanese management tends to be much more egalitarian than American or European management, with more worker participation and fewer titles. Managers and workers dress in the same uniform and eat in the same cafeteria.

But at the head office, the lines of authority are clearly drawn. A Japanese board tends to be overloaded with titles, more than would be the case in the United States or Europe.

What is happening now is a gradual internationalization in Japanese business practice at the executive level. In some aspects of management style, in the office at least, Morimoto said, "We have a lot of things to learn from Americans and Europeans."

Sometimes Japanese decision-making is not so clear, and that can be frustrating for overseas staff, according to Morimoto. "Behind-the-curtain negotiating is sometimes needed, but it is difficult for others to know what is going on in a company."

In August, Toyota Motor Corp. introduced its plan to simplify the management structure and obtain greater flexibility. For one thing, the company decided there were too many titles. Too many people had to apply their hanko, or seal, to every proposal. As a result, making an immediate decision was impossible, according to managing director Iwao Isomura.

The company had simply become too big. It had outgrown the old system of management.

The world is changing rapidly, and customer needs are changing rapidly too, but at Toyota, "by the

TRUCK INDUSTRY

Truck sales just miss another 5 million year

By Joseph Bohn
AUTOMOTIVE NEWS STAFF REPORTER

Truck sales in the United States were just shy of 5 million units in calendar 1989, their second-best performance ever.

Sales of 4,976,334 trucks were 4.22 percent below calendar 1988 sales.

Among the truck segments, medium-duty models experienced the sharpest downturn, followed by light duties. Heavy Class 8 truck sales held up the best.

The industry retailed 4,664,418 Class 1-3 light trucks in calender 1989, down 4.04 percent from 1988, according to the Motor Vehicle Manufacturers Association.

It retailed 166,848 Class 4-7 trucks, down 10.34 percent from a year earlier, MVMA said.

Sales of heavies dipped 2.27 percent to 145,068, MVMA figures show.

Net new orders for heavy trucks totaled 9,753 in November, down 37.51 percent from a year earlier, according to Deutsche Bank Capital, a New York-based financial institution.

November orders were off only slightly from October's 10,092. It ended a modest seasonal decline and was a further indication of the slow improvement that has been taking place since August when orders bottomed out at 6,700.

Frank Prezelski, an analyst with Deutsche Bank, predicted that fluctuations will continue on a month-to-month basis, but that the general trend will be upward.

Order rates for December and January are still expected to show declines from December 1988 and January 1989, respectively, because the latter were exceptionally strong months.

January 1989 drew an all-time monthly record of 23,664 Class 8 orders. December 1988 posted a very strong 18,581 orders.

If order rates continue near current levels through the early part of this year and then begin to rise, the industry will see retail sales of about 125,000 Class 8s, Prezelski said.

Meanwhile, Class 8 production rates have been somewhat higher than the order intake, reducing the backlog of unfilled orders.

The November backlog was just over 40,000 units, down from October's 42,000.

The cancellation rate on new truck orders improved in November to just under 10 percent from about 16 percent in October, further indicating that demand is stabilizing, Deutsche Bank said.

Luxury conversions

Centurion Vehicles of White Pigeon, Mich., has introduced two luxury conversions, built on Ford's chassis. Both the three-quarter-ton Classic 150 model and the one-ton Classic 350 provide seating for up to nine.

Truck Industry Alliance revived to study '90s issues

By Arthur Flax
AUTOMOTIVE NEWS STAFF REPORTER

WASHINGTON — The Trucking Industry Alliance, an informal forum of trucking industry representatives, has been reactivated to discuss national highway and transportation policy.

The group, which includes participants from the Motor Vehicle Manufacturers Association, truck manufacturers, trucking companies and associations — with the notable exception of executives from the American Trucking Associations — was formed in 1983 to promote the safety and image of the commercial trucking industry.

It established the Professional Truck Driver Institute of America to certify truck driving schools, but had not met since 1986.

Thomas H. Hanna, MVMA president and chief executive officer, said the group has been reactivated as a result of interest from participating organizations in the development of a national transportation policy; the environment, including global warming and alternative fuels; taxation; regulation; trucking image; and safety.

Representatives from the Highway Users Federation for Safety and Mobility presented that group's plan for a new national highway program at a meeting of the Trucking Industry Alliance. The Federal-Aid Highway Program is due to be re-authorized by Congress in 1991.

Jack C. Martin, public affairs director of the Highway Users Federation, said, "We think Congress will put off (the debate over) highway legislation until 1991. We should start pushing and prodding (to gain congressional interest) now."

Tony Kane, director of the Transportation Department's national transportation policy team, said the National Transportation Policy will include plans to rebuild and improve the highway infrastructure, to protect the quality of the environment and to foster innovation through research and development efforts in conjunction with the private sector.

SERVICE MANAGEMENT

Training and equipment stressed

Ford official lists priorities for success in collision repair field

DALLAS — Investment in equipment and training today will be the key to success in the collision repair industry tomorrow.

That was the conclusion of Kenneth W. Myers, parts and service marketing manager for Ford parts and service division, in an address at the National Autobody Congress and Exposition here.

Evolutionary developments in automobiles, more demanding customers, tighter environmental standards and increasing insurance industry pressure are among the forces squeezing collision repairers, Myers said.

Myers

But the perceptive, progressive collision repairer will make the investments necessary to complete high-quality, lower-cost repairs; to forge vital partnerships that will allow better management of those forces and, most important, to place customer satisfaction as the overriding objective, he said.

Achieving those goals, Myers said, will assure collision repairers a chance to take part in the tremendous opportunities that will exist in the coming decade.

Outlining apparent shortcomings in the repair industry, Myers cited industry statistics showing that from 1981 to 1988, the cost of the average collision repair for vehicles in their first two years of use rose from $1,200 to more than $2,100.

In that period, labor costs for sheet metal rose 16 percent; paint, 45 percent; mechanical/electric, 66 percent; and body straightening, 76 percent, Myers said.

"It's taking collision repairers more time to do as good a job in the areas where the most dramatic evolutionary automotive developments have occurred," he said. "Are you planning to acquire the tools and equipment necessary to reduce the time and costs involved?

"If we compare automotive developments in the 1980s to a snowball, the advancements to come in the 1990s will be the equivalent of an avalanche. Are you ready?" Myers asked the group.

He said the largest repair shops — those with $750,000 or more in annual sales — are growing at the fastest rate. Those shops, he noted, have the best equipment, the largest number of certified technicians and the most comprehensive training programs.

"Those who invest in leading-edge equipment will be better able to manage automotive evolution," Myers said.

"Those who are committed to ongoing employee training will be better able to meet the increasingly rapid changes that will confront the industry. And those who diversify their businesses beyond the basic frame, body and paint work will achieve a one-stop service capability for the electro-mechanical systems repair needs that will exist in the next decade."

Myers also asked the group to understand and to help address the dilemma faced by the insurance industry to hold down auto insurance premium costs.

"If I were to address this gathering 10 years from now, I would surely like to be able to report that one of the most dramatic developments of the past decade had been the emergence of a climate in which the automakers, collision repairers and insurers all worked to achieve maximum customer satisfaction with its obvious benefits to all," he said.

Myers said, insurers have been "writing their own estimates, granting preferred body-shop status, using computerized estimating and parts locating systems and increasing the use of imitation parts of questionable quality."

Myers said Ford Motor Co. is interested in assisting the repair industry. As an example, he cited the company's increased emphasis on production of collision repair reference and resource material and the meeting between the Automotive Service Association and Ford's vehicle design, repairability and serviceability staffs to analyze how concepts related to reducing repair costs could be designed into new vehicles.

Heated windshield system

A new windshield system that melts ice three to five times faster than a conventional defroster has been developed and is being manufactured by Libbey-Owens-Ford Co. of Toledo, Ohio, and General Motors Delco Remy Division of Anderson, Ind. Called the ElectriClear, the system is demonstrated by Donald Paulson, systems engineer for Delco Remy. An invisible micro-thin coating between the glass layers of the windshield conducts heat without obscuring vision.

Dallas firm offers free oil reclamation

By Francis J. Gawronski
AUTOMOTIVE NEWS STAFF REPORTER

To stem the flow of used motor oil into the environment, Chief Auto Parts, a Dallas retailer of automotive replacement parts, has begun a motor oil recycling program.

The program, initially offered by selected stores in California, is the first of its kind in the country, said Mike Manor, Chief president.

Manor said the company wants to expand the free program rapidly to Chief's 495 stores in nine states.

As more reclamation centers open, Chief plans to provide recycling at regional centers located in stores in California, Texas, Nevada, Arizona, Oklahoma, Tennessee, Kentucky, Alabama and Arkansas.

People who want to dispose of their used oil will be able to deposit it in a state and federally approved receptacle at any participating Chief store, according to Manor. The oil, he said, will be taken to a processing plant for recycling.

"Each year, Americans dump 400 million gallons of used motor oil into our environment. That's 35 times the amount of oil that was spilled in the Alaskan oil disaster," Manor said.

"As a major provider of motor oil and motor oil products to the public, we believe that Chief has an obligation to prevent such needless dumping of used motor oil — oil that should be recycled," he said.

The program, Manor said, is supported by most federal, state and local government agencies as well as by most environmental organizations. Many state agencies, he said, are offering a toll-free number to call for information on the nearest recycling center.

Manor said the recycling program is part of Chief's commitment to the environment. Earlier, Chief introduced the Specially Adapted for the Environmment Program, which will offer many new environmentally safe products.

The recycling program, he said, also provides for an in-store educational presentation explaining the availability of environmentally safe products as well as proper use and disposal of hazardous chemicals.

Service volume posts '89 gain despite downturn in December

By Francis J. Gawronski
AUTOMOTIVE NEWS STAFF REPORTER

Despite a decline in December, new-car dealers' service and parts business for all of 1989 recorded a modest gain, according to the Automotive News Service Index.

Shop volume in dealerships in 1989 amounted to 101.4 percent of the business for all of 1988. December's volume dipped to 96.3 percent of the total recorded by dealers in the year-ago month.

All indicators used in the Service Index, except repair orders written, made gains in the 12-month period. In December, all five indicators were below the volume posted in the same month a year earlier.

Gross profit on all labor, parts and accessories — the most important indicator to dealers — gained 2.2 percent over the previous 12-month period. In December, profits were down 5.8 percent.

Repair orders written dipped 2.2 percent for the year and 6.1 percent for December, while total labor sales (customer-paid and warranty) were up 2.0 percent for the year and down 2.5 percent for the month.

Shop parts sales (customer-paid and warranty) advanced 0.5 percent in 1989 and declined 6.5 percent in December, while sales of parts and accessories climbed 0.7 percent for the year and fell 3.0 percent for the month.

Figures used in the Service Index are compiled from monthly reports on service and parts business from a cross-section of the nation's new-car dealers.

SERVICE INDEX
96.3★

	Dec., '89 vs. Dec., '88	Jan.-Dec., '89 vs. Jan.-Dec., '88
Gross Profit on All Labor and P&A Sales	−5.8%	+2.2%
Repair Orders Written	−6.1%	−2.2%
Total Labor Sales (Customer & Warranty)	−2.5%	+2.0%
Shop Parts Sales (Customer & Warranty)	−6.5%	+0.5%
Sales of All P&A	−3.0%	+0.7%

★ Survey by Automotive News shows that dealers' service and parts business in December 1989 was 96.3 percent of business in December 1988. Service business in the first 12 months of 1989 was 101.4 percent of business in the corresponding period in 1988.

Study says parts market is growing at snail's pace

By Francis J. Gawronski
AUTOMOTIVE NEWS STAFF REPORTER

Competition, tight profit margins and tough technological requirements are expected to continue to have a negative impact on original equipment manufacturers and aftermarket parts and markets.

According to a study by Business Communications Co. of Norwalk, Conn., the market for parts and materials is growing very slowly, about 1 percent annually.

That slow growth, Business Communications said, is likely to continue for the foreseeable future as competition from abroad and transplants hold profit margins down and smaller producers continue to have problems meeting requirements of the Big 3 automakers and other producers.

The study is titled "Competitive U.S. Market for Automotive Parts: OEM, Aftermarket and Japanese Producers." It said that while the market for original equipment sales to the Big 3 is somewhat stagnant, the market for parts and materials for Japanese cars built in the United States promises to soar as production capacity increases.

In 1987, Nissan Motor Manufacturing Corp. U.S.A. purchased 30 percent of its outsourced parts from U.S.-based firms and planned to double that percentage by the end of last year. Much of that market is expected to go to Japanese transplants, although those firms have been open to joint ventures with American-based partners, the study said.

Business Communications estimates that by 1994, the overall original equipment market for parts and materials for Japanese cars produced in the United States will be $7.4 billion.

Currently, the firm estimates that Japanese automakers spend $3.7 billion in the United States for parts and materials for vehicles built in this country.

As the company sees it, the breakdown of current original equipment spending by the Japanese includes: electrical/electronic, 33 percent; body parts, 30 percent; materials, 15 percent; engine parts, 12 percent; chassis/drivetrain, 8 percent; and accessories, 2 percent.

Although the growth rate in the U.S. transplant markets for the past several years has been much higher for Japanese companies than for European companies, the total volume of European investment in the U.S. auto parts industry is comparable to Japanese investment, according to Business Communications.

West Germany, for example, has invested about half as much as Japan, although that investment has not received nearly as much publicity as Japanese investment in the U.S. auto parts industry, the report said.

Since 1985, new Japanese investment has been about four times as great as new European investment, although growth rates from Europe have remained relatively high, the firm said.

According to the study, U.S. firms also will have to contend with competition from U.S. direct investment in the parts-producing industries of the Third World. Farseeing U.S. auto parts companies have started to invest in those industries, especially in South Korea, the report said.

Approximately 30 percent of the value of the parts in a typical South Korean automobile is contributed by foreign manufacturers, so the rising South Korean industry also represents a good potential market as well as a threat, the report said.

The study also noted:

- The percentage of value added by outside firms is expected to increase in the United States.
- Large firms will increasingly dominate the U.S. parts industry.
- In materials, plastics will be used in increasing amounts in body parts and aluminum in engines. Ceramics and advanced composites will also find new applications.
- The growth rate in the aftermarket is considerably brighter than in the original equipment market — especially for Japanese vehicles.

Import sales drop 25% in dismal December

By Jesse Snyder
AUTOMOTIVE NEWS STAFF REPORTER

LOS ANGELES — December was dismal for many importers. A 25.54 percent sales decline for the month dragged the 1989 import car market 8.82 percent below the 1988 total.

Japanese import models outperformed the market in 1989, while European, Korean and Brazilian models fared worse. Of 28 makes in business long enough to have comparative numbers, only seven posted gains — five Japanese, one Korean and one European.

Nissan, Acura, Suzuki, Daihatsu and Mitsubishi were the Japanese import gainers. Overall, Japanese imports were off 5.2 percent for the year, but a surge in production and sales from Japan's North American assembly plants more than made up for that dip.

Volvo was the lone European to gain for the year, and Ford's Festiva, built by Kia Motors, was the only Korean gainer.

December was volatile. Fourteen import makes posted sales declines of 30 to 62 percent, but Audi, Daihatsu and Mitsubishi gained 45 to 53 percent for the month.

Some of the most interesting results were in the import luxury market.

Lexus and Infiniti are already affecting the segment after only a few months on the market.

Lexus recorded a strong December. It exceeded its target of 16,000 sales for the calendar year, although it has scaled back its 1990 goal from 75,000 to 60,000 sales. Infiniti's first sales report, for November and December, was a less than rousing 1,723 units.

BMW had a nightmarish December. Its final-month sales drop of 37.75 percent pushed the 1989 loss into double digits, and upstart Lexus outsold BMW for the month, 4,545 to 4,463.

The newcomers' effect on the rest of the import luxury segment was mixed. Audi, Mercedes-Benz, Volvo and Acura posted gains for the month, including a record December for Volvo that pushed it over 100,000 sales for the year.

Jaguar, Peugeot and Sterling recorded small December declines, but their losses were not as great as the overall import market. Saab, Porsche and Merkur had losses of 46 to 62 percent.

Among established luxury and near-luxury imports only Acura and Volvo recorded increases for the year. Acura was up 10.78 percent, and Volvo was up 4.19 percent.

Jaguar and Audi were down a bit less than the 8.82 percent dip for all imports. Mercedes, Peugeot and BMW were just above the average decline. Saab, Porsche, Sterling and the lame-duck Merkur took heavy losses.

December was a bad month for Korean imports.

Hyundai's month-to-month declines had gotten progressively smaller through the fall, but December sales dropped 50.60 percent and pushed 1989 losses back over 30 percent. Sales of the Mitsubishi Precis, built by Hyundai, were off 83.20 percent for the month and 30.43 percent for the year.

The Pontiac LeMans, built by Daewoo, fell nearly 86 percent for the month and was off 30.29 percent for the year. The only bright spot for Korean automakers was the Ford Festiva, up 0.23 percent for the year despite falling 28.49 percent in December.

Brazil's only import entry, the Volkswagen Fox, was off 33.86 percent for 1989.

Japan renews export quota for another year at 2.3 million

By Mary Ann Maskery
AUTOMOTIVE NEWS STAFF REPORTER

TOKYO — Japan will retain voluntary restrictions on auto exports to the United States for the ninth straight year. The 1990-1991 limit will be the current level of 2.3 million cars.

Hikaru Matsunaga, minister of international trade and industry, said exports to the United States during the current fiscal year, which ends March 31, will fall below the ceiling.

Estimates are around 2 million cars.

In Detroit, the UAW and the Big 3 criticized the announcement.

UAW President Owen Bieber welcomed the restraint, but added, "We are deeply dissatisfied by the high level that was announced."

Chrysler Corp. Vice Chairman Gerald Greenwald described Japanese export restraint as a "meaningless political gesture."

Ford Motor Co. said a case could be made to reduce the Japanese export ceiling because of the low local content of Japanese cars made in the United States.

"The automotive deficit will continue to increase as the volume of transplants increases," Ford said.

General Motors said, "We believe it is time now to focus on the very real structural barriers that American firms face when selling products in Japan, rather than spending time and effort on a policy that works largely to the benefit of the Japanese."

Responding to the criticism, Mazda Motor Corp. President Norimasa Furuta said Americans may have some anxiety about exports disrupting the market. But he said he believed exports would not reach the maximum. He predicted that the rate of exports will continue to decline and will not reach the point where they will disrupt the market.

Mazda will not take any "excessive" action to try to meet a particular quota, he said.

Furuta added that he thought it was improper to combine the sales of imports with the locally produced vehicles to come up with a figure for Japanese market share in the United States.

Matsunaga said the Japanese government wants "to confirm the declining trend of exports" before deciding whether to drop the voluntary export restraints.

Last year, when the Ministry of International Trade and Industry extended quotas for another year, it left open a possibility that restraints could be scrapped even in midyear if exports showed a decided decline.

Trade problems between the United States and Japan, current difficulties facing American companies and the 30 percent share of the U.S. new-car market now claimed by Japanese makers formed the background to making the decision, according to the ministry.

But the ministry insisted that the deciding factor was the export total itself.

Industry reaction was low key and predictable. The decision was inevitable in view of the current economic relationship between the two countries, according to the Japan Automobile Manufacturers Association.

Shoichiro Toyoda, president of Toyota Motor Corp., said the decision had to be made, but he "regretted" the consequences of having trade limits for another year.

Yutaka Kume, president of Nissan Motor Co., called it a "realistic choice" in view of the difficult trade relations and the slowdown in the U.S. market.

In general, companies that might be able to sell more cars in the United States — Toyota and Honda Motor Co. — accepted the extension of volutary export restraints as a second-best solution.

SALES

FROM PAGE 1

cember 1988.

Incentive programs, put in place during mid-December, may be producing higher sales than expected, said Wendy Beale Needham of Smith Barney Harris Upham & Co. in New York. She also said a balmy January after a cold December brought people into showrooms.

The big jump came chiefly from individual buyers. Fleet sales, often used by automakers to smooth out the valleys in overall car sales, were not the mainstay this time.

Officials at both Hertz Corp. and Budget Rent A Car Corp. said they have taken delivery on some vehicles, but not enough to account for a surge in total sales.

In early January, U.S. car and light-truck makers sold 259,854 new vehicles, compared to 178,594 last year.

Seven of the eight domestic manufacturers scored gains. Nissan was the only U.S. car and light-truck maker to sell fewer vehicles.

Sales rose about 81,000 units for the industry, and GM was responsible for half of that increase. GM's car and light truck sales jumped 55.43 percent, or 36.00 percent based on the daily selling rate.

First-ever rebates on Chrysler's market-leading minivans added fuel to light-truck sales. "The minivans are leading the way," said James P. Holden, Chrysler's director of sales and marketing analysis. Chrysler's light-truck sales rose 64 percent for Jan. 1-10.

Besides the new rebates on minivans, Chrysler guaranteed consumers that they would get the difference if Chrysler raised rebates on certain models during the model year. That helped Chrysler sell 47.94 percent more cars and light trucks than a year ago (29.46 percent daily rate).

Ford Motor Co.'s combined vehicle sales rose 30.73 percent in the period (14.39 percent daily rate).

In early January, U.S. makers sold 158,315 cars, up 49.04 percent over last year's period, or 30.41 percent on a daily rate basis.

In early January, cars sold at an average annual rate of 8.1 million domestic cars, based on a Commerce Department formula that factors in seasonal selling patterns. That was considerably stronger than last year's depressed 5.2 million rate.

GM's car deliveries soared 60.51 percent this year. Ford retailed 33.59 percent more cars and Chrysler boosted car sales 30.76 percent. It was the first time since mid-September that Chrysler has posted a year-to-year gain for a 10-day period.

Except for Nissan, transplant car sales rose.

Toyota sold seven times as many U.S.-built Corollas and Camrys as in 1989. Last year, Toyota had just begun to sell Camrys produced at its new plant in Georgetown, Ky.

Honda sold 38.55 percent more domestically produced Civics and Accords while Mazda sold nearly three times as many U.S.-made MX-6s — 713 vs. 261.

The four U.S. light-truck makers sold 40.30 percent more trucks than they did a year ago (22.76 on a daily-rate basis).

FBI stings parts counterfeiters

Leon Hardiman, general parts distribution manager for Chrysler Corp., addresses a Detroit press conference at which the FBI showed counterfeit auto parts confiscated in 30 raids on manufacturing and retail outlets. The Big 3 aided the FBI in a 15-state sting operation called Partsman. The bureau said it intends to prosecute. No warrants have been issued yet.

CHRYSLER

FROM PAGE 1

shi-built Dodge Raider sport-utility, and the Chrysler Conquest TSi sport specialty coupe has been discontinued.

Chrysler will continue to sell through Dodge and Plymouth the Mitsubishi-built Colt subcompact, Colt Vista wagon and Colt DL wagon. Dodge will still market the Mitsubishi-built Ram 50 small pickup. And later this year, Chrysler will begin selling the Stealth, a sport specialty coupe it developed with Mitsubishi.

Under Japan's voluntary export restraints, Mitsubishi is permitted to sell nearly 195,000 car units — its own brand and those badged as Chryslers — in the U.S. market during the 12 months ending March 31. With Chrysler taking fewer imported cars, Mitsubishi theoretically could sell more through its own network. Mitsubishi dealers plan to import about 21,000 fewer vehicles from Japan even though they expect to sell more vehicles than before.

Richard Recchia, executive vice president of Mitsubishi Motor Sales of America, said the company in 1990 will receive 55,000 additional units from Diamond-Star Motors, the Chrysler-Mitsubishi joint venture in Illinois.

Recchia said Mitsubishi Motor Sales of America expects to sell 185,000 cars and trucks in 1990 as its dealer network grows from the current 410 to nearly 500 points this year. Mitsubishi dealers sold 151,000 units in 1989.

The sales company sold 32,000 Diamond-Star units in 1989 but in 1990 will receive 87,000 U.S.-built cars. Diamond-Star builds the Mitsubishi Eclipse (also Plymouth Laser and Eagle Talon) and will begin producing the Mitsubishi Mirage for the 1991 model year.

"We're going to try to sell the maximum number of imported vehicles we can and also all of the Diamond-Star vehicles," Recchia said. "We will have the availability from Japan. Whether we have the ability is another question."

Hammes described the negotiations between Chrysler and Mitsubishi as "a long and protracted series of discussions" that concluded to the mutual satisfaction of both companies. "It wasn't just a question of volume. It was a multi-dimensional discussion about what model availability there would be and what type of (marketing) support would come from the factory versus the distributor," he said.

Automotive News Staff Reporter Mary Ann Maskery in Tokyo contributed to this report.

$1,000 rebates set off Chrysler minivan sales surge

By Mary Connelly
AUTOMOTIVE NEWS STAFF REPORTER

DETROIT — Chrysler Motors minivan sales have skyrocketed 50 percent from year-ago levels, propelled by a $1,000 consumer incentive.

Chrysler in the first 10 days of January held 62 percent of the U.S. minivan market.

On Dec. 15 Chrysler began offering a minivan rebate for the first time since the vehicles were introduced in the 1984 model year. From Dec. 11 through Jan. 10, sales of Chrysler minivans climbed 50 percent over year-earlier levels.

Union representatives at the two assembly plants where the Dodge Caravan and Grand Caravan, Plymouth Voyager and Grand Voyager and Chrysler Town & Country are built said the rebate has assured there will be no cuts in scheduled production and overtime through the end of January.

Tentative February schedules also include overtime, the union representatives said.

The minivan rebate will expire Jan. 31.

Chrysler said when the rebate was designed to boost showroom traffic and protect first quarter minivan production schedules.

The company then will build minivan stocks to 25,000-30,000 units in anticipation of model changeovers this summer.

"Prior to the rebates we had less than 15 days worth of orders," said Ken Lewenza, chairperson of Canadian Auto Workers Local 444 at the Chrysler Windsor, Ontario, assembly plant where the models are built.

"Now we have 31 days of orders," he said.

Chrysler said last week the Caravan/Grand Caravan dealer stock stood at a 36-day supply and Voyager/Grand Voyager at a 40-day supply.

The Chrysler Town & Country stood at a 100-day supply.

From Dec. 11, 1989 through Jan. 10, 1990 Chrysler sold 26,225 Caravan/Grand Caravan units, up 43 percent from one year earlier, and 21,693 Voyager/Grand Voyager units, up 57 percent from one year earlier.

The company also sold 323 Town & Country units.

EUROPE

FROM PAGE 3

biggest gainer in 1989, with sales rising 10 percent to 1,501,800 and market share climbing from 10.5 percent in 1988 to 11.1 percent. The jump was due primarily to the brisk-selling Opel Vectra/Vauxhall Cavalier compact introduced late in 1988.

West Germany finished strong and remains Europe's largest new-car market.

Elsewhere, sales records were established in the United Kingdom, France, Italy and Spain.

Automotive News figures that the VW Group was the European leader with 1989 sales of 2,018,000 cars, ahead of Fiat's 1,991,300.

Fiat put its 1989 European passenger-car sales at 2,007,733 and said VW's total was 1,970,000. It maintains that Volkswagen's figures are inflated by inclusion of car-derived commercial vehicles that are registered as passenger cars in Germany, but not in Italy. Fiat said it deducted such units from Europe-wide figures and came up with a total market of 13,322,647 — claiming a 15 percent share for itself.

Last year, Fiat called the 1988 Fiat-VW sales race a virtual draw while others crowned Volkswagen. This time, the Italian company is more assertive.

"This year we're saying that Fiat is No. 1 in Europe," said a spokesman. "Nobody seems to agree with Fiat," said John May of the British research group Automotive Industry Data.

May put the market at 13.42 million for the year and said his figures show that VW was No. 1 — the first to top 2 million in Europe — while Fiat had 1.98 million.

Automotive News figures indicate VW Group sales, including VW, Audi and Seat, rose 4.1 percent to 2,018,200. Gains by VW and Seat overcame a 4.2 percent decline to 358,600 suffered by Audi across Europe in 1989. VW AG has yet to release its own sales figures for the year.

Fiat Group sales, including Fiat, Lancia, Alfa Romeo and Ferrari, improved 5.7 percent to 1,991,300, good for a 14.8 percent market share, according to Automotive News sources.

Peugeot S.A. suffered the largest decline in market share among the six volume manufacturers, dropping from 12.9 percent in 1988 to 12.6 last year on sales of 1,704,300. Volume was up 1.8 percent. Peugeot S.A., including Peugeot and Citroen, had been the fastest-growing of the volume makers for two years, but it was hurt by a seven-week strike last fall.

Renault improved 5.3 percent to 1,392,200, a 10.3 percent share. But both Peugeot's and Renault's December figures were skewed by the apparently inaccurate French registration statistics. Preliminary figures show Renault sales in Europe declined 24 percent to 89,700 in December, while Peugeot plummeted 40 percent to 47,700. The French makers say the figures do not reflect actual sales because of a public employee strike.

Ford increased its market share from 11.3 percent in 1988 — when it suffered a disabling strike — to 11.6 percent on sales of 1,562,000, a gain of 6.6 percent.

Japanese makers combined lost 0.4 of a percentage point in market share in 1989 as sales finished almost exactly at the previous year's figure. Sales totaled 1,456,800, down 0.1 percent from the year before and a 10.8 percent share.

BMW, a big gainer in the first half of the year, lost some ground in the second half, but still finished with sales of 377,300, a 6.2 percent rise over the year before and a slight market share increase from 2.7 to 2.8 percent.

Archrival Mercedes-Benz declined for the year, with European volume dropping 2.1 percent to 434,400 and market share falling from 3.4 to 3.2 percent. But Mercedes has regained momentum. Sales rose 18 percent to 33,900 in December, while BMW was down 11.8 percent to 20,300.

Among national markets, West German sales were up 3.4 percent in December to 232,000 and finished the year at 2,851,700, a 1.6 percent increase over the previous year.

The United Kingdom posted a record 2,300,900 sales, a 3.9 percent improvement over 1988. But British sales appear to have begun a widely predicted decline resulting from tighter credit policies. Volume was off 5.3 percent to 86,800 in December.

NEW-CAR SALES BY COUNTRY IN EUROPE

Country	12 months 1989	Pct. Change vs. 1988

Chrysler targets Italy, Spain, Portugal

By Richard Johnson
AUTOMOTIVE NEWS STAFF REPORTER

BRUSSELS, Belgium — Chrysler will enter the Italian, Spanish and Portuguese markets later this year as it extends sales of its North American vehicles across the Western European continent.

Chrysler's return to Europe after a 10-year absence began in 1988 in West Germany, Holland, Belgium, Switzerland and Austria. France was added this year.

"We expect to open up Chrysler in Spain and Italy for the 1991 model year," said Klaus Hadulla, director of European operations at Chrysler International Corp. "We will probably go into Portugal when we start Spain."

Hadulla said Chrysler will operate through existing distributors in the new markets. Completion of distribution arrangements is expected within the next two months. Renault currently holds Jeep distribution rights in Italy and Spain — as well as France — and will after a start-up 17,090 in 1988. Last year's totals included 18,796 Jeep Cherokees, 3,350 Jeep Wranglers, 7,792 Voyager minivans and 2,062 LeBaron convertibles. The remaining 7,000-plus units were composed of the Chrysler Saratoga, full-sized van and other vehicles.

The biggest market was West Germany, with combined Chrysler and Jeep sales of 10,828 units. In France, Renault-distributed Jeep sales totaled 7,209 and Chrysler sales came to 2,160. Sales of Jeep by Renault in Italy totaled 4,717.

Combined Chrysler-Jeep sales in Switzerland totaled 4,154 units; Belgium, 2,937; Holland, 2,281; Austria, 1,659; and 3,423 in other European and Scandinavian countries.

Hadulla declined to forecast 1990 sales in Europe but Chrysler Import Deutschland, Chrysler's German distributor, has projected sales of 13,500 this year. Chrysler Chairman Lee Iacocca has fore-

"We're happy with what we achieved in 1989," said Hadulla. "All the markets did better than we expected. Two years ago there were a lot of people in Europe belittling Chrysler. People said we wouldn't make it, but that's all gone."

The dealer count stood at 749 outlets in Europe late last year including 327 with both Chrysler and Jeep franchises, 342 with Jeep only and 80 with Chrysler only.

Except for the entrance of Chrysler in Spain and Italy, Hadulla predicted as much as 15 percent growth in the size of the retail network this year.

"There will be no big increase in the number of dealers, maybe another 15 percent this year in overall dealer numbers in countries where we already do business," he said.

Europe will get Chrysler's facelifted minivan — including the four-wheel-drive option — for the 1991 model year.

Grab your share of the ever booming limousine buyer market

Dealers:

- 1989 or 1990 Cadillacs
- Immediate Delivery
- 150,000 mile factory warranty
- Bailment pool cars in all colors
- Cadillac Drop Ship Code 10321
- Distributor areas still available

50 to 62-inch rear-wheel drive Brougham (shown here) or new front-wheel drive Fleetwood or Sedan deVille with all new heavy duty chassis options FE7 and R1P

TOYOTA

FROM PAGE 1

the award except to say that it disagreed with the verdict and will challenge it.

Angle charged that Toyota engaged in conduct that caused damage to his franchise; refused to deliver vehicles in reasonable quantities in a reasonable time; and imposed unreasonable standards of performance in violation of the Missouri Motor Vehicle Franchise Practices Act.

This isn't the first time Toyota has tangled with a dealer on the issue and lost. In what has been hailed as a benchmark decision, a federal jury in 1986 awarded $2 million to a Hazelwood, Mo., Toyota dealer after finding the company had violated state franchise law by delivering too few cars to the dealership.

The automaker will be in court again this week defending the turn-to-earn system. Tom Pappas Toyota, of St. Charles, Mo., and Miranda Toyota in Cranston, R.I., have sued the automaker for allegedly failing to provide a sufficient number of cars.

In North Carolina, Rice's Toyota World settled out of court recently after filing suit against Florida-based Southeast Toyota Distributors involving the turn-to-earn formula. Sources have pegged the settlement at more than $25 million.

Lyman Ostlund, marketing professor at the University of Arizona, said similar suits with other makers have been settled out of court. Nissan is engaged in such a suit in Oregon, he said.

Ostlund, who was called by Angle as a witness, says every "allocation system that works off the velocity of sales has the capacity to be self-corruptive." He is president of Tucson-based Fontana Group, dealer consultants.

"Allocation plans are needed only under conditions of shortages," he said. "It's nothing more than a rationing plan. But when a rationing plan persists longer than it is needed, then it leads to excessive power." Ostlund said that without significant policing of the system, dealers will cheat on sales reports, as will district managers so they can show better performance.

Toyota's allocation system is based on a formula instituted at a time when there was a shortage of vehicles. The number and mix of cars allocated to a dealership in a given period depend on its sales for the previous period.

But the formula also contains provisions for a pool of vehicles that can be given to dealers at the discretion of regional managers for special promotions, new franchises.

Angle filed his suit in 1987, the same year he says his Toyota dealership was sold at a loss. He had the franchise for four years.

Angle, who has been an import dealer for 27 years, began fighting with Toyota over the location of his service department. He had consolidated his Toyota service facility into one serving his Nissan facility as well. Although showrooms were separate, Toyota asked him to split up the service departments. He complied for a year, but recombined them to save $130,000.

Toyota then began dropping his allocation until he was receiving only six cars a month.

Testimony showed Toyota went back as far as eight months to find mismatches between Angle's claimed sales and his actual sales, then used discrepancies to whittle his allocation down. In the first two years he owned the franchise, Toyota adjusted his allocation five times; in the last 18 months, he had 78 sales adjustments, said Alvin Shapiro, Angle's lawyer.

Mitsubishi, Cadillac add dealer spiffs

Factory-to-dealer incentives are available on Mitsubishi trucks and all Cadillac models except Allante.

Until Jan. 31, Mitsubishi dealers who sell at least 26 percent of their quotas earn $1,000 on 1989 and 1990 Monteros, 1989 and 1990 four-wheel-drive pickups and 1989 and 1990 two-wheel-drive pickups.

Cadillac dealers earn incentives based on performance against quotas. The payments are: $500 per sale for up to 49 percent of quota; $750 for 50 to 99 percent; and $1,000 for 100 percent. The Cadillac program also ends Jan. 31.

Output rises, but it's far below 1989

By Kathy Boyer
AUTOMOTIVE NEWS STAFF REPORTER

U.S. automakers scheduled 87,058 cars last week, 74.84 percent more than the prior week but 43.27 percent below the year-ago week as several plants remain idle to adjust inventory.

Companies split last week's estimated production as follows: General Motors, 38.76 percent; Ford Motor Co., 22.39 percent; Chrysler Motors, 10.45 percent; Honda of America Manufacturing, 8.88 percent; New United Motor Manufacturing Inc., 4.71 percent; Toyota Motor Manufacturing U.S.A., 4.94 percent; Mazda Motor Manufacturing (U.S.A.) Corp., 3.94 percent; Nissan Motor Manufacturing Corp. U.S.A., 2.73 percent; Diamond-Star Motors, 2.56 percent; and Subaru-Isuzu Automotive, 0.64 percent.

Truckmakers targeted 53,114 units for assembly last week, 62.83 percent above the prior week but 43.74 percent below the year-ago week.

GM will eliminate the second shift at its Linden, N.J., plant Feb. 26, affecting 1,600 hourly workers. Also, the plant will be idle the week of Jan. 29 because of high inventories.

GM laid off 450 workers at its Wilmington, Del., facility when it reduced the line speed Jan. 26. Beginning today, its Buick City plant in Flint, Mich., will operate on a single shift until Feb. 12.

GM's Lakewood, Ga., plant was shut down today to adjust inventory. The plant is expected to resume operations Feb. 5.

GM's Shreveport, La., plant will be closed the weeks of Feb. 5 and Feb. 12. The Lordstown, Ohio, van plant closed today and will be down until Feb. 5, and the Van Nuys, Calif., plant remains idle until Feb. 5 for model changeover.

The following GM plants were expected to reopen today after being down because of sluggish sales: Lansing, Mich., Grand Am line; Flint, Mich.; Baltimore; Pontiac West in Pontiac, Mich.; Bowling Green, Ky.; Doraville, Ga.; and the Fairfax plant in Kansas City, Kan.

Ford's Edison, N.J.; Lorain, Ohio; and St. Louis plants resumed operations today after being closed to adjust inventory.

Chrysler's Warren, Mich., plant is idle this week because of poor sales. The plant is expected to resume operations Jan. 29.

Canada trails last year, too

Last week's scheduled Canadian auto production was 13,190, 36.87 percent more than the previous week but 33.42 percent below the year-ago week.

Truckmakers targeted 14,264 units to be assembled last week, 13.90 percent more than the prior week but 33.50 percent fewer than the year-ago week.

Chrysler Motors' Bramalea, Ontario, and Brampton, Ontario, plants remain idle until Jan. 29 because of poor sales.

GM gives green light to new Camaro and Firebird

By Michelle Krebs
AUTOMOTIVE NEWS STAFF REPORTER

DETROIT — General Motors last week approved the next-generation Pontiac Firebird and Chevrolet Camaro, moving the sporty, image cars closer to production.

Approval of the product itself removes a major hurdle. The business case for the models, which includes the marketing plans, sales forecast and amount of investment, and location for their assembly have yet to be approved. Those approvals are expected in the next two months.

While GM refuses official comment on future product programs, three officials confirmed the product won the go-ahead.

The future of the sporty cars has been uncertain for many months, particularly in recent weeks as GM disclosed plans to cut costs by $1 billion in 1990. Some of the cost-cutting is to come from cancellation or deferral of future product programs, mainly those beyond the 1992 model year that have not received corporate approval to move toward production.

But last Monday, the new F-cars, as they are known, won management approval.

Camaro and Firebird have been produced in the same form with only minor year-to-year changes since 1982; the new versions will debut in the spring of the 1992 model year but likely will be badged as 1993 models. The brands debuted in 1967-68.

Even before the most recent round of cost-cutting, debate raged about the future of the cars. One faction within GM, mostly financial people, argued that sales forecasts showed a continued slide in the 1990s, and the investment would not be worth it. The prospect for tougher fuel economy and exhaust standards further clouded the matter.

The peak sales year for each car was 1978 — 251,983 for Camaro and 177,192 for Firebird. Chevrolet sold 95,469 Camaros in 1989, down 6 percent from the previous year. Pontiac sold 55,030 Firebirds last year, also down about 6 percent. The Van Nuys, Calif., plant that now produces the cars was down to one shift, had been idled for slow sales repeatedly and now is closed

Spring option specials cut Dodge truck prices

Changes slated for vans, pickups

By Joseph Bohn
AUTOMOTIVE NEWS STAFF REPORTER

HIGHLAND PARK, Mich. — Dodge Division will announce a new series of specially priced spring truck packages to its dealers this week. Coupled with rebates, they will enable dealers to sell well-equipped Dakota pickups for less than $9,000 and well-equipped full-sized Ram pickups for less than $10,000.

Base prices are $9,700 for Dakota and $11,425 for Ram pickups.

Chrysler Motors also will make a series of product design and powertrain changes in its 1991 and 1992 minivans and mid-sized and full-sized pickups to boost their competitiveness.

Trucks, vans and sport-utilities account for about 49 percent of Chrysler Motors' vehicle sales.

The changes include:

- Intercooling the popular Cummins turbodiesel, introducing a new heavy-duty four-speed automatic transmission for it and targeting the full-sized Ram Club Cab pickup as the best new candidate for that engine.
- A 1991-model facelift for the full-sized pickups.
- Revamping the Dodge Caravan and Mini Ram Van/Plymouth Voyager/Chrysler Town & Country minivans with new styling and features.

They include all-wheel-drive availability on both long- and short-wheelbase models; rear anti-lock brakes; "Quad Command" captain's chairs available in three trim levels, including leather; a Convert-A-Bed feature for the long-wheelbase models; rear shoulder belts; rear center high-mounted lights as part of the new glass design; thin-back molded

Big 3 engineers will keep more work inside

By Jack Keebler
AUTOMOTIVE NEWS STAFF REPORTER

The Big 3 will outsource fewer big projects in the 1990s, reversing a decade's rapid growth in contracted large-scale engineering projects.

Even as top-level suppliers and contract engineering firms prepare for more complicated and comprehensive projects, domestic auto companies are questioning the efficiency of turning major vehicle programs over to outsiders.

High-level engineers at U.S. car companies said that in the future, in-house engineering departments would handle many projects that might have gone to outside firms in recent years. They said that despite their potential, the benefits of modular manufacturing and contract engineering have been exaggerated.

> "There are definitely some risks with not having complete control."
>
> **Jim Kennedy**
> Ford

This tough perspective comes just as first-tier suppliers Dana Corp. and TRW Inc. announced plans to form a super-supplier joint venture to do more, larger turn-key product development and supply programs for Ford Motor Co., General Motors and Chrysler Motors.

Super suppliers like the TRW-Dana combine — with the capability to engineer, develop, coordinate the efforts of smaller suppliers and deliver tested and complete system modules to assembly plant back doors — might gobble the lion's share of a shrinking contract-engineering market.

A super supplier, unlike a contract-engineering firm, would have no interest in simple engineering contracts. Its intention is to provide one-stop shopping for automakers seeking engineering and system supply.

"It all goes back to need," says Marty Hermanns, vice president, systems engineering at Dana. "OEMs have made a conscious decision to reduce their engineering capacity. And we're filling the need for a supplier that can design and engineer a product."

But carmakers say they will be more wary of turning over vehicle systems to an outside vendor. The dangers cited in-

Tonkin

TV says it is crucial to cars

Television stations must convince auto dealers that television advertising is crucial to the recovery of the auto industry.

That message went to more than 600 television stations last Friday when the Television Bureau of Advertising sent its member stations "Auto Boom . . . Or Bust."

Ron Tonkin, National Automobile Dealers Association president, was featured on the program. He said expected ad cuts could be alleviated if factory sponsored auto associations are abolished.

— Ariena Sawyers

42-year dealer warns GM:
In our guest opinion column, dealer Archie Huebner shares his advice to General Motors. He warns of a "bloodbath" in the '90s and implores GM to be the first of the Big 3 to shun rebates. Page 14.

Gordon Buehrig, design giant, dies

By Jack Keebler
AUTOMOTIVE NEWS STAFF REPORTER

Gordon Buehrig, one of the titans of automobile design, died last Monday at his home in Grosse Pointe Woods, Mich., of complications from a fall. He was 85.

"This is a sad day for anybody who has been involved in transportation design," said Thomas C. Gale, vice president of product design at Chrysler Motors. "Mr. Buehrig was one of the founders and forefathers of the industrial design profession as it related to automobiles. We will miss him."

Buehrig's best known work was the low-slung 810 Cord, a V-8-powered front-wheel-drive car with hideaway headlights. Introduced at the New York auto show in November 1935, it was a sensation. It is acknowledged by car collectors today as a classic automotive design.

Buehrig is generally credited with the invention of the T-top, which he patented in 1951. While at Ford Motor Co., he built a prototype 1955 Thunderbird with a T-top, but the company did not adopt the design for production. General Motors installed a T-top on the 1968 Corvette without acknowledging Buehrig. When the designer threatened to sue, the company settled out of court for $15,000.

Last year, Buehrig was inducted into the Automotive Hall of Fame at Northwood Institute in Midland, Mich.

In recent years, Buehrig was an outspoken opponent of "wind-tunnel" design, which he claimed sacrifices vehicle character for a low coefficient of drag.

"It's about time the automobile companies sent their aerodynamic experts on a slow boat to China and let the real designers put some personality into their cars," he said in a 1986 interview. "Take the Ford Taurus and Sable. They look like the ultimate in aero. But where do you go from there?"

Noting that there are automotive wind tunnels all over the world, Buehrig said, "They give you the same answers in any language — English, German, Japanese. The wind tunnel is a completely impersonal gadget without a soul. Its goal is to produce an object that will go through the air best. And that shouldn't be the total purpose of an automobile."

Buehrig was born June 18, 1904, in Mason City, Ill. As a child, he was fascinated by automobiles — and frustrated because his family didn't have one.

In high school, he got his first experience in automobile design. He and his brother Donald ac-

Buehrig is generally credited with the invention of the T-top.

Trucks lead mid-month sales gain

Light trucks helped the domestic market continue its sales thaw in mid-January.

Sales of U.S.-built trucks in mid-January climbed 9.36 percent while sales of U.S.-built cars rose only 0.53 percent for an overall sales increase of 4.02 percent over last year. Both periods had nine selling days.

In mid-January, 155,803 U.S.-built cars were sold, compared to 154,979 last year.

Sales of U.S.-built trucks totaled 110,762, compared to 101,286 last year.

Chrysler Motors reported the biggest jump in truck sales.

The company's truck sales climbed 35.61 percent over last year, buoyed by a consumer rebate on minivans.

Truck sales were up 5.88 percent at General Motors and 0.19 percent at Ford Motor Co. Nissan truck sales fell 42.07 percent in the 10-day period.

Car sales were off at each of the Big 3. The declines were 1.48 percent at GM, 9.13 percent at Ford and 8.85 at Chrysler.

At GM, Buick and Chevrolet posted gains while Cadillac, Oldsmobile and Pontiac reported fewer sales for this 10-day period than the year-ago period.

At Ford, Lincoln was the only make to show a sales increase.

At Chrysler, Eagle and Plymouth sales were up while Chrysler and Dodge sales declined.

Except for Nissan, transplant car sales increased.

Car sales were up 14.86 percent at Honda, 55.41 percent at Mazda, 516.72 percent at Mitsubishi and 371.36 percent at Toyota.

Mitsubishi sold 1,918 units in the period and Toyota sold 7,405.

Nissan car sales were off 12.49 percent.

Smyrna to assemble V-6 for 1992 Ford-Nissan minivan

By Lindsay Chappell
AUTOMOTIVE NEWS STAFF REPORTER

SMYRNA, Tenn. — Nissan Motor Manufacturing Corp. U.S.A. will add V-6 engine assembly to its production center here by 1992.

Smyrna trade to increase, Page 41

The engine will be used in the new minivan, code-named VX54, that Nissan will build with Ford Motor Co. at Avon Lake, Ohio, for 1992 introduction.

Nissan will spend $25 million to build the V-6 assembly line.

It will begin production in October 1992 with a targeted output of 135,000 units annually.

The line will have a maximum capacity of 150,000 units a year and should reach full production by the end of 1992, according to Emil Hassan, vice president of engineering.

Plans for the minivan call for production of 135,000 vehicles a year, giving Smyrna a potential excess capacity of 15,000 engines annually.

Despite the increased number of models planned for Smyrna, Hassan said the new engine, a 3-liter version of the the V-6 currently used in Nissan trucks, will be used only in the Ford-Nissan minivan.

Smyrna currently builds Sentras and pickup trucks and has begun a $490 million expansion program to add a larger vehicle to replace the Stanza in 1992.

Nissan also has indicated it wants to move production of its Pathfinder sport-utility vehicle from Japan to the Smyrna plant, but it has no firm schedule for when that will happen.

Hassan said the V-6 will not fit any of the other vehicles built at the Smyrna plant.

Nissan originally was to supply Japanese-made engines for the minivan.

The company's decision to invest in U.S. production sends a signal that the minivan is moving forward.

The venture bogged down late last year for unexplained reasons.

Hassan said the project went through a "re-evaluation period," but added, "We at Nissan are merely a supplier to the project, and we kept working on our part of it all along. As far as we are concerned, it never left the drawing board."

The V-6 project, which will require 250 addi-

Aro boss caught in Romanian revolution

By Jim Henry
AUTOMOTIVE NEWS STAFF REPORTER

NEW YORK — The Romanian-American president of Aro of North America found himself in the middle of a revolution on a business trip to Romania last month.

"Everybody's happy there now," said Catalin Tutunaru, president of the company that is seeking to import the Aro Hunter, a Ford-powered, Romanian-built sport-utility vehicle. The import firm is based in Saco, Maine.

"There were a lot of wounded and killed people, but now they're more free. There's enthusiasm like you wouldn't believe," Tutunaru said.

Tutunaru was in Romania for meetings with Auto Dacia factory officials when the shooting started. It culminated in the Dec. 22 revolution in Bucharest.

During lulls in the fighting, Tutunaru said he helped carry food to rebels who were attacked by government troops when they took over the state-controlled radio and television center in the capital.

When the fighting died down, he flew to Switzerland on a U.S. military plane because commercial flights had been suspended.

Greater democracy in Romania could improve long-term prospects for U.S. import of the Aro Hunter, but the revolution has again delayed the project.

"There's going to be a little bit of delay, obviously, while some changes are made," said William P. Miller, chief operating officer of Aro of North America.

Tutunaru said the changes he saw in Romania are profound. He said that before the revolution, Romanian assembly-line workers worked under difficult conditions, though he said there was no forced labor as in some other Eastern Bloc countries.

"There was a shortage of heat and light. In the plant, it might be 35 or 40 degrees, with no lights. Now, things are bright and the heat is on," Tutenaru said.

And since the communists have been ousted, communications with the factory are more normal, he said. "Every phone was tapped," he said. "You had to have government permission to use the fax machine. Not every person was allowed to handle it.

"If anything, it's easier to do business without the higher government officials wasting money, and without the Securitate (secret police) watching me just because I am an American-Romanian," he said.

"Before, they just wanted to take advantage of us. Now, they want to cooperate. That's the feeling of everybody on the street."

But the revolution has worried some of Aro's 16 would-be dealers.

"It's a good product, and they have a good organization. They have done a good job trying to communicate with their dealers," said Lee M. Horner, president of Wyman Ford in Maplewood, N.J., who signed up for a franchise.

Anglo offers new financing plan

Anglo American Auto Auctions will introduce a dealer financing plan called the Gold Card Program to new-car dealers at the Nashville Auto Auction. The program begins Feb. 1.

Under the program, dealers may return any vehicle purchased with the card within 30 days, and be guaranteed 95 percent of the original price or the subsequent resale price, whichever is more.

Anglo American, of Nashville, Tenn., eventually will offer the program to its 21 other auctions.

"Dealers should use the Gold Card Program to diminish risk and diversify into the lucrative used-car market," said Michael J. Richardson, president of Anglo American.

Anglo American will issue the Gold Card to a select group of new-car dealers meeting its lenders' requirements for credit approval. Third National Bank of Nashville will provide financing for the pilot program.

According to Bob Rauschenberg, executive vice president of Anglo American Auction Services, interest rates will differ slightly among dealers.

"Anglo's program, with a 45-day repayment period and a 30-day buyback guarantee, is clearly an attractive program for dealers," he said.

A service window will be dedicated to card holders at the auction.

It will act as a branch of the bank at the auction. A bank representative will attend every auction sale for the first several months.

AUCTION BRIEFS

CHARLES THOMAS

The Gold Card Program is similar to one offered by GE Capital Auto Auctions, of Barrington, Ill., to improve dealer cash flow and increase their buying power.

GE's Plus 10 program allows registered car dealers at several of its auctions to buy a vehicle then hold the car in their inventory for 10 calendar days before paying for it.

When the payment is received, GE clears the vehicle title for the dealer.

The Plus 10 program is applicable on all cars and trucks up to a $20,000 limit per vehicle. Individual credit lines are negotiated.

Retail leases gain

Vehicle leasing is surging and has ever since the 1986 Tax Reform Act phased out deductions for interest paid on car loans.

As a result, many lending institutions that bought lease paper when the upswing began are now considering alternatives for remarketing the first wave of end-of-term lease cars.

According to the Consumer Banking Association, demand for leasing is on the upswing and there are no signs that the growth will stop.

Between 1981 and 1989, consumer leasing increased 175 percent. This year an estimated 5.5 million vehicles will be leased.

Because more lease vehicles are sold at auctions, some auctions are now tailoring special programs for financial institutions.

One of them is Anglo American Auto Auctions, which recently introduced its EOT Program. The program works because the company has 22 locations.

First, financial institutions must secure an agreement with Anglo American, then notify it 30 days before of the number of vehicles coming to the end of term.

Lessees take their cars to the closest auction outlet and within half an hour of delivery, Anglo produces a vehicle condition report, collects any fees due and provides the lessee with a return ride to their home or office.

Anglo makes a recommendation on whether it is advisable for the car to undergo reconditioning or mechanical work.

The financial institution is then apprised of where and when the car is sold.

Canada vehicle sales off 5.2% in '89; Dec. drops 15.6%

By Bill Vance
SPECIAL CORRESPONDENT

TORONTO — Canada ended a less than robust 1989 on an even softer note as combined sales of domestic and imported cars and trucks fell 15.66 percent in December.

Sales of domestic and imported vehicles were off 5.23 percent for the calendar year, dropping below the 1.5 million mark to 1,457,428 units.

In December, domestic cars suffered a 17.19 percent decline, while imports fell 11.10 percent. Chrysler Canada and General Motors of Canada dropped 29.04 and 27.22 percent, respectively. Ford managed a 7.26 percent gain, paced by brisk sales of the Tempo, which captured the title as Canada's best-selling car for the fourth consecutive calendar year.

On a year-over-year basis, domestic cars were off 9.57 percent. Imported cars, which had been rising while overall sales fell, declined in December, down 11.1 percent. Toyota, Honda, Nissan, Suzuki, Ford and Volvo were among the gainers. Hyundai sales were off 51.6 percent, and Volkswagen plunged 48.7 percent.

The imports still barely managed to stay slightly ahead on the calendar year, however, by 1.86 percent. Total domestic and imported car sales for the calendar year were down 5.98 percent.

Truck sales also fell in December for the domestics. They were down 20.39 percent as each of the Big 3 posted declines.

Ford, GM and Chrysler each suffered on a 12-month basis with their domestic volume collectively falling 8.1 percent.

Import truck models managed a 14.69 percent gain for the month and a year-long increase of 32.71 percent. For the year, Toyota, Nissan, Mazda, GM, Suzuki and even Lada were up. Only Chrysler and Volkswagen sold fewer imported trucks last year than in 1988.

The strong import truck performance wasn't enough to keep overall truck sales ahead of last year, however. Sales fell 3.62 percent.

Bill Atkinson, vice president of marketing at General Motors of Canada, summed up the Canadian year: "1989 was a challenging year for the automobile business. Consumer spending for the first three quarters of 1989 was so strong that some economic contraction was inevitable in the fourth quarter.

"The automobile industry is very interest rate sensitive and contin-

Tempo again wins Canada sales race

TORONTO — For the fourth year in a row, the Ford Tempo was the best-selling car in Canada.

Ford of Canada sold 48,975 Tempos last year, about 2,000 fewer than in 1988. A vigorous promotional and incentive campaign in December pushed Tempo into first place.

Rounding out the top 10 were: Chevrolet Cavalier, 47,396; Honda Civic, 37,684; Mercury Topaz, 35,905; Chevrolet Corsica/Beretta, 33,086; Honda Accord, 32,181; Pontiac Sun-

VOLVO

FROM PAGE 2

end to 240 production. The North American spokesman said the 240 "will continue to be the entry-level car for some years to come."

Gyllenhammar told the Swedish business magazine *Veckans Affarer* that Volvo is investing $3 billion in the new car, which will have front-wheel drive and an all-new engine.

"I have been test driving the new Volvo and the car looks very tough," he told the magazine.

He would give no more details, but added that the timing of the introduction is also a question of investment.

Volvo's cuts come as the automaker is increasing capacity at its new Uddevalla plant and expanding output at Ghent, Belgium. Specifically:

- Approximately 13,000 fewer 240-series units and 1,000 fewer 700-series units will be made at the main Torslanda plant in Gothenburg. The work force of about 9,000 will be cut by 250.
- 760-series output at Kalmar will be cut from 23,000 to 20,000 units. Nine Friday production stops are planned this spring.
- Assembly of the 700-series at Uddevalla, which opened last spring, will be increased by about 12,800 cars, resulting in an expected 1990 output of 22,000 cars. The final production goal at Uddevalla is 40,000 cars a year.
- Two production stops of three days each will reduce output of the 700-series at Ghent by 2,500 cars. The plant is in the process of being expanded to produce 125,000 cars in 1992 compared with this year's 95,000.

Automotive News Special Correspondent Knut Moberg in Oslo, Norway, contributed to this report.

LEVIN

FROM PAGE 2

more than $100 a car, based on Office of Technology Assessment figures. EPA estimates are higher, $6.5 billion or $500 a car.

Levin said that money, using the lower $1.5 million cost figure, would be better spent developing an electric car, a project he supports but has not discussed with the Big 3. An alternative may be to exempt automakers that had demonstrated a certain level of research and development with alternative fuel cars from having to meet the final tailpipe requirement, he said.

While Levin's sympathy with the Big 3 is known, the senator's support has become more vocal during the past several weeks while Congress has been in recess. During that time, General Motors and Chrysler Motors have been working with Levin's office, drumming up support for an amendment to the bill by the Senate Environment and Public Works Committee.

Dozens of senators were approached by the automakers, but Levin, whose second term expires in 1991, has been the most receptive to the domestic automaker's concerns, said Edward Kavjian, a lobbyist for GM.

"We have never made any headway in the Senate committee. Business interests get the short shrift in the committee. We just haven't gotten a fair hearing there," Kavjian said.

Rob Liberatore, executive director of public policy and legislative affairs for Chrysler, said Chrysler has been in contact with Levin's staff. "We have been meeting several times a week with him since before Christmas," Liberatore said.

Levin is still vague on the specifics of his proposed amendment and is clearly calculating his political support. His focus is the issue of cost, which has become a vital one in the clean air debate.

The cost question was raised by President Bush, days before the Jan. 23 return of Congress, sent a letter to Senate leaders warning that the bill drafted by the Senate committee would cost the industry and consumers $40 billion a year by the year 2000. Bush argued that his bill would achieve nearly the same benefits but cost $19 million. Bush's letter was interpreted by some as a thinly veiled veto threat.

Hardliners in the Senate, including Mitchell, retaliated with emotional speeches imploring that the value of human health does not carry a price tag.

"It costs the United States more in health care and lost productivity than it would to clean up air pollution. This bill will save the American people money," Mitchell said, the day Congress returned.

Automakers said the health ar-

PRODUCTION

Car output rises again; 121,380 built

By Karen Detkowski
SPECIAL CORRESPONDENT

U.S. carmakers continue to increase weekly production schedules as more plants return from shutdowns caused by lagging sales.

Automakers targeted 121,380 units last week, 44.29 percent above the prior week but 23.84 percent below the year-ago week.

Last week's estimated production was split as follows: General Motors, 43.08 percent; Ford Motor Co., 27.00 percent; Chrysler Motors, 9.64 percent; Honda of America Manufacturing, 6.52 percent; Toyota Motor Manufacturing U.S.A., 3.54 percent; New United Motor Manufacturing Inc., 3.38 percent; Diamond-Star Motors, 2.33 percent; Mazda Motor Manufacturing (U.S.A.) Corp., 2.09 percent; Nissan Motor Manufacturing Corp. U.S.A., 1.96 percent; and Subaru-Isuzu Automotive, 0.46 percent.

Truckmakers scheduled 77,815 units last week, 42.58 percent above the previous week, but 18.91 percent below the year-ago week.

GM extended downtime at its Fairfax plant in Kansas City, Kan., and the Doraville, Ga., plant last week. Both plants are expected to resume output today.

GM's Oklahoma City plant will be idle this week to adjust inventories. The plant is expected to resume operations Feb. 5. As previously reported, the Linden N.J., plant is also idle this week; it is slated to reopen Feb. 5.

GM's Pontiac East truck plant in Pontiac, Mich., will be closed this week to adjust inventory. The Baltimore plant will be down the week of Feb. 5 because of high inventories.

GM expects to reopen its Van Nuys, Calif., plant next week. The plant was down for changeover to the 1991 Chevrolet Camaro and Pontiac Firebird.

Ford's Edison, N.J., plant will be down this week. The Kansas City, Mo., plant and the Kentucky Truck plant in Louisville will be idle the week of Feb. 5.

Ford slated daily and Saturday overtime last week at its Wixom, Mich., assembly plant. The plant assembles Lincoln Town Car, Mark VII and Continental.

Chrysler's Toledo, Ohio, plant will be idle this week and next to adjust inventory of the Jeep Grand Wagoneer. The line was down the first three weeks of the year.

Production of the 1990 Chrysler LeBaron four-door sedan began Jan. 25 at Chrysler Motors' Newark, Del., assembly plant.

Canada's build nears 20,000

Canadian automakers targeted output of 19,950 cars last week, 48.88 percent above the previous week, but 4.05 percent below the year-ago week.

GM's No. 2 plant in Oshawa, Ontario, will be closed the week of Feb. 5 to adjust inventory.

Chrysler's Bramalea, Ontario, and Brampton, Ontario, plants are expected to resume output today after being down for two weeks.

Trotman said a pickup project could be similar to the Ford-Mazda setup in Flat Rock, Mich.

Ford, Mazda may build compact pickup in U.S.

By Laura Clark
AUTOMOTIVE NEWS STAFF REPORTER

DEARBORN, Mich. — The next step in the growing product marriage between Ford Motor Co. and Mazda Motor Corp. could be the replacement for both companies' compact pickup trucks, according to the chief of Ford's North American Automotive Operations.

Executive Vice President Alexander Trotman said Ford and Mazda are discussing a joint venture for compact pickup trucks. He said he favors a U.S. production site.

Trotman said the joint venture would be similar to the Ford/Mazda agreement at Mazda's Flat Rock, Mich., plant, which builds vehicles badged and sold by both Ford and Mazda. The Flat Rock plant produces the Mazda MX-6 and Ford Probe, a sister car.

Officially, Ford says the venture is in discussion stages. A Mazda spokesman said the automaker is studying various possibilities for local sourcing of trucks. But Ford product planning documents show that the joint-venture truck has been in Ford's future product plans for at least two years.

According to the planning documents, the pickup will be designed by Ford in North America and will be introduced in the 1995 model year to replace the Ford Ranger. A 1989 Ford business plan shows that Ford expects to sell 291,300 units of its Ranger compact pickup in the 1995 model year.

Ford truck engineering sources say the truck is being worked on now but, like any future product program at Ford, could be canceled up to 29 months before Job 1.

The new truck would be the second truck Ford has developed for Mazda. In the 1991 model year, Mazda dealers will receive a 2-door version of the Explorer sport-utility. Ford dealers will sell 2-door and 4-door ver-

Dealers sing the blues

Prices, rebates, slow economy cloud '90

By Lindsay Chappell
AUTOMOTIVE NEWS STAFF REPORTER

The consensus is in: 1989 was lousy. And if we're lucky, 1990 will be more of the same.

That's the word from hundreds of auto dealers across the country, interviewed for *Automotive News*' annual "City by City" feature on the eve of the National Automobile Dealers Association convention.

The convention opens Saturday in Las Vegas.

From Boston to Phoenix and from Miami to San Francisco, new-car retailers say they're optimistic — as dealers tend to be. But they are nonetheless bracing for more of the bumpy ride they experienced last year. Dealers have reduced vehicle inventories. And many have trimmed their staffs and cut advertising budgets to cope with a first-quarter slump.

The majority of dealers interviewed blamed last year's setback on a combination of inflated sticker prices, confusion over rebates, tight-fisted financial institutions and consumer jitters over gloomy economic forecasts.

Many admitted that they had been hoping for a fourth-quarter sales turnaround, but in markets throughout the Midwest and South, bitter winter weather dashed those hopes.

Last year "was the worst year we ever had," said Robert A. Shanks a Buffalo, N.Y., Chrysler-Plymouth dealer. Industrywide car and truck sales fell 6 percent to 14.8 million 1989, the lowest total since 1984.

Despite the pervading concern, outlooks differed from region to region, from car line to car line and

even from dealership to dealership within the same market.

Sales increased in some areas last year — Seattle, Houston and Las Vegas, for example. Retailers in many markets were pleasantly surprised by heavier-than-normal January floor traffic. And general expectations are that sales could pick up again by late spring — if factories curb production long enough to eliminate what was frequently called a "glut" of product.

Several common themes were voiced.

Dealers aimed their strongest comments at factory rebate programs, which the majority criticized. They argued that — regard-

Porsche direct marketing tabs 300,000 prospects

By Cleveland Horton
CRAIN NEWS SERVICE

IRVING, Texas — Porsche Cars North America has compiled dossiers on 300,000 top prospects as part of a new marketing campaign.

On Feb. 19, Porsche Cars North America will begin the first stage of an extensive direct marketing effort that will invite 300,000 carefully screened, affluent prospects to test-drive its cars. They will be the Porsche 300,000.

Just as members of the Forbes 400 and other lists may be offended by the information included in the publication of their assets, some of the Porsche 300,000 may be shocked at the intimate knowledge held by the car company.

"We've been successful in obtaining a great deal of information about our prospects," said Stephen D. Judge, senior vice president and executive creative director at Rapp Collins Marcoa, Porsche's direct marketing agency, "such as their profession, their income range, the type of cars they currently drive, the type of cars they used to drive, where they live and what type of neighborhood they live in."

Porsche insists that it is acting entirely within federal and state regulations regarding direct marketing. "We're sensitive to privacy laws, but we can still communicate that we know what

Newest models make the gains as Ford and Japan climb

By Peter Brown
EDITOR

In the land of new-car sales, the newest car is king.

Sales of newly introduced or updated cars generally increased in the otherwise down year of 1989, while sales of older models slid steeply.

1989's winners & losers, Page 23

Ford Motor Co. was the only domestic maker to increase its share of the combined U.S. car and light-truck market during a calendar year in which the nine Japanese auto companies together picked up 1.5 points of total vehicle market share — and nearly three points of car share, to 26 percent of the car market. Ford did far better with new cars than with old.

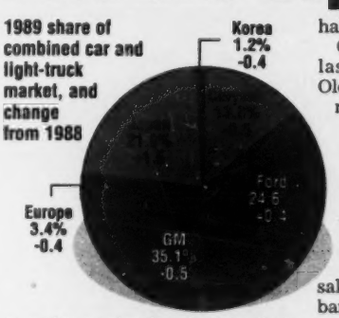
And the Japanese profit from the customers' preference for new cars. With a few exceptions, chiefly small-volume specialty vehicles, the Japanese sell models no older than three or four years.

A Japanese advantage, says analyst Maryann Keller, is "that they introduce so many more models. A few years ago, there was no Mazda MPV or Mazda Miata, no Lexus, no Infiniti. They retain the old and keep making the old newer, and they continuously insert brand-new products that serve whole new groups of customers."

When cars and trucks are combined, the big losers in total market share in 1989 tend to be domestic divisions that don't sell light trucks.

GM's upscale Cadillac and Buick divisions made small gains, but the foundering Oldsmobile Division dived by 113,111 sales and lost a half-point of market share in total vehicle sales and two-thirds of a point in car share. Pontiac dropped 96,962 in unit sales and more than a third of a point in combined market share.

Oldsmobile and Pontiac began selling minivans (counted as trucks on the sales charts) in the fourth quarter of 1989, but it was too late in the year and sales were too scant



to make much of a dent in their huge car-sales losses.

The Chrysler nameplate at Chrysler Motors dropped 29.09 percent in unit sales and nearly a half-point in total market share.

Chrysler also added a minivan last year but, as in the case of Oldsmobile and Pontiac, sales were minimal.

Meanwhile, of the six largest Japanese importers, only Subaru of America Inc., which sold no trucks, saw decreased sales in 1989. Mitsubishi Motor Sales of America Inc., with a dramatic percentage rise in car sales and a small drop in truck sales, overtook the truckless Subaru for fifth place among Japanese importers.

Combined market-share gains of more than 0.4 point were racked up by Toyota Motor Sales U.S.A.

Chrysler to close St. Louis No. 1

Approximately 3,700 workers will lose their jobs when the automaker moves Dodge Daytona (right) and Chrysler LeBaron production out of Missouri. Story on Page 2.

Saab Auto plans luxury car, but 900 replacement is first

By Richard Johnson
AUTOMOTIVE NEWS STAFF REPORTER

STOCKHOLM, Sweden — Saab Automobile AB has swung into action on a new luxury car that will compete with the uppermost Mercedes-Benz and BMW models. But President and Chief Executive Officer David J. Herman said Saab's first new product move will be to replace the 12-year-old 900.

Saab Automobile — the month-old 50-50 joint venture between General Motors and Saab-Scania AB — already has project teams busy on new models, said Herman. A team is also working on plans to produce GM Europe's Calibra coupe in Finland beginning early next year.

Herman has set objectives to reduce Saab's Swedish absenteeism and attrition, re-emphasize sales in continental Europe and become profitable by the end of next year.

He also has an eye on the United States. After being appointed in mid-January, he conferred with Robert Sinclair, president of Saab-Scania of America, and set up regional dealer meetings for May.

And he is discovering his company's products. "I drove a Saab for the first time three weeks ago," he said.

GM paid $600 million for its stake in Saab Automobile, which will develop, produce and sell cars under the Saab name and also produce cars for GM Europe.

Herman's appointment is an indication of GM's management control of the venture. But the Harvard-trained lawyer, who has held a series of international posts, is anxious to keep GM at arm's length.

GM Europe President Robert Eaton told him "the most important challenge is to keep people out who don't belong," said Herman. For example, pure curiosity-seekers from other parts of GM will be kept out.

In his new position, Herman said, "I really don't find it necessary to call up anyone from General Motors day to day."

Herman will report to an as-yet unnamed chairman of Saab Automobile, who will be appointed by GM along with four other members of the 10-member board. Three members will be chosen by Saab-Scania and two will be union representatives. Herman said he expects the board to be settled by March.

Only Herman and James Crumlish, who was financial vice president at GM's joint venture with Suzuki in Canada, have been assigned to Saab. Herman said "very few other GM people will become part of Saab."

For instance, the still vacant position of sales and marketing director probably will not be filled with a GM executive.

Saab's third model range will be positioned above the 9000 and is likely to get a 6-cylinder engine from GM. But it will not come off a GM platform as speculated, Herman said.

"That will not be a shared program. That is a program for Saab," he said. "It may have an engine that Saab choses to buy from GM, but that will be a good thing because at that volume you wouldn't build your own."

He said the car will be aimed at top-of-the-line offerings from BMW, Mercedes-Benz and Swedish archrival Volvo. The luxury model — as well as replacements for the 900 and 9000 — will debut within five years, he said.

"I think the 900 would come first," he said. "Not just because that's our volume model, but because the amount of work that has to be done is less. Saab had already done some work on the 900."

Herman said Saab's own development work will be built upon, not scrapped entirely as has been rumored. But the company will seek to fit GM components.

"The engineers are now looking at what GM has to offer in terms of chassis components — to see how that meshes with what had been done before," he said. "But things like appearance, internal and external, should be able to be maintained."

That holds for the future as well. Herman said Saab would incorporate "significant platform and chassis componentry" but would not just accept a whole platform and build on it: "Saab is not a body-builder."

He said the replacement for the 900 will be out sooner than Saab would have been able to do on its own. "The affiliation with GM enables Saab to do things a little bit quicker and to do more things," he said.

Herman said the new Opel/Vauxhall Calibra coupe should be in production at Saab-Valmet in Finland by the end of the first quarter of 1991. He said the plant in Uusi-

see SAAB, page 35

"The affiliation with GM enables Saab to do things a little bit quicker," says David Herman.

14-year overseas career for GM-Saab leader

STOCKHOLM, Sweden — David Herman's General Motors career is atypical. Though American, the new chief executive of Saab Automobile has never worked in Detroit and has not been posted stateside since he left GM's New York legal staff in 1975.

He went to London in 1976 to coordinate GM's activities in the Soviet Union and Eastern Europe, which he calls "a good idea before its time."

Herman: 1990 plans for U.S., Page 35

Herman drew upon his experience as a Ford Foundation Fellow at the Harvard Russian Research Center.

He next helped launch GM's huge manufacturing operation in Spain in the early 1980s as a special assistant to the managing director of GM Espana.

He ran GM units in Chile and Colombia and then took over GM Continental in Belgium, where he supervised the tricky consolidation of production at two plants in Antwerp into one in early 1988.

Last year, Herman launched GM Europe's Masterfit dealer service franchise while executive director of GM's European parts and accessories operation.

The experiences were well-suited to the Saab position, he said.

"When you are overseas, you tend to get to run the total business more," he said. "If you're managing director in Chile, you really do run the business in Chile. On a day-to-day basis, there is nobody involving themselves in your labor relations, your government relations, your purchasing policy, your product program."

— Richard Johnson

GM dealers get extra 60 days of low-interest floorplanning

By Michelle Krebs and Jim Henry
AUTOMOTIVE NEWS STAFF REPORTERS

General Motors has lengthened the time period for its low-interest wholesale financing of new vehicles for dealers.

GM wants dealers to order more vehicles for spring and keep GM plants running.

The extension of low-interest floorplanning is only for dealers who finance their inventories through General Motors Acceptance Corp.

GM has added 60 days to the period during which it charges dealers no more than 5.5 percent on financing for new-vehicle inventory. The extension is for vehicles invoiced between Jan. 29 and March 31.

The interest-rate cap typically runs for about four months, but varies by quarter.

Some dealers hailed the move as a recognition by GM of dealers' dire financial situation. Others said dealers already have so much inventory in a slow market that it will make little difference.

The National Automobile Dealers Association estimates that only about half of the nation's 25,000 dealerships are profitable.

Floorplanning interest expense and advertising are dealers' largest expense items. And dealers have been asking automakers for relief on floorplanning.

"Clearly, this enhancement is a step in the right direction," said Charles Walton, president of the 760-member New Jersey Automobile Dealers Association.

In December, the association wrote to GM Chairman Roger Smith, calling for "immediate special floorplan assistance" for New Jersey dealers. The association said as many as 100 of its members are on the verge of bankruptcy or are leaving the business.

The association is sending similar appeals to other manufacturers.

After the interest-rate protection period, GMAC's wholesale financing rate rises to a point over the prime rate.

In a memo to dealers, GM said, "This action provides dealers an exceptional opportunity to increase product availability and fully capitalize on the strong spring market."

VW bets a bundle on tongue-twister ad theme

By Dutch Mandel
AUTOMOTIVE NEWS STAFF REPORTER

TROY, Mich. — Volkswagen of America hopes its new advertising campaign will generate showroom traffic and boost sales with a word few can pronounce.

Fahrvergnugen.

But the importance of VW's new advertising themeline lies not with how the odd-sounding German word is spoken, but with its message: Lower prices, increased value and no rebates. For a company whose U.S. sales plunged 19 percent in 1989, the campaign is critical.

William Gelota, marketing director of Volkswagen United States, said VW will spend 25 percent more on advertising than its 1989 ad budget, which is estimated by *Advertising Age*, a sister trade publication of *Automotive News*, to have been $100 million.

But Gelota said money also will be used to launch both the fahrvergnugen campaign and VW's new full-sized Passat line.

VW seeks to capture customer attention in the six to eight radio spots already produced with a breathy, British-accented woman singing, "Ah, fahr-ver-gnu-gen . . . " to a heavy European sounding beat. A voice-over announcer tells listeners what the German word means and its relation to VW products.

William J. Young, vice president of VW United States, believes the campaign teases consumers enough to get them into VW showrooms where the company's lowered pricing strategy can be told and sold.

"Fahrvergnugen as a campaign is 100 percent product- and customer-oriented," Young said. "It is 180 degrees different than any price and rebate advertisement in the market today."

Young said few companies advertise products so much as they advertise deals. He cited Mercedes-Benz and Volvo as two companies that do focus on product in their advertising.

Fahrvergnugen — pronounced "Far-fair-gnugen" — means "pleasurable driving experience."

"A key to this campaign is delivering a customer on the showroom floor predisposed to asking questions about the product, and asking the salesperson what fahrvergnugen is," said

see VW ADS, page 35

LATE NEWS

NHTSA drops investigation of Lumina's non-motorized belt

WASHINGTON — The government has determined that the non-motorized safety belt on the Chevrolet Lumina 4-door sedan is not defective.

In October, the National Highway Traffic Safety Administration opened an investigation because Lumina's passenger-side seat belt broke 80 milliseconds into a 35 mph crash test. The break occurred near the point where the belt connects to the top of the door.

A three-month investigation found that no similar belt failures had been reported.

GM won't discuss job total at Janesville

JANESVILLE, Wis. — General Motors says it wants to increase productivity at its assembly plant here, but it declined to discuss possible reductions in the work force.

James Harbour, an independent researcher in Troy, Mich., recently said the plant, which employs about 5,300 people, could eliminate 2,370 workers and continue its current output to become one of the more productive U.S. plants. He rated Janesville 30th among 37 U.S. auto plants in efficiency and productivity.

GM has said the Harbour report is accurate and that it is looking at ways toimprove the operation, but GM declined to say if the Wisconsin work force will be cut.

The Janesville plant turns out about 56 Chevrolet Cavaliers and about 11 medium-duty trucks per hour, though GM said last week that the truck rate will be boosted to 14. A second shift that was to be added in April has been scrapped.

Later this year, the plant will discontinue Cavalier production and begin the switch to Chevrolet Suburbans and Blazers and GMC Suburbans and Jimmys for the 1992 model year.

— The Associated Press

NUMMI to hire more workers for trucks

FREMONT, Calif. — New United Motors Manufacturing Inc. will add at least 700 people to its operation early next year when it begins producing Toyota trucks at its Fremont plant.

About 150 of the new hires will work in administration, while the others will work on the assembly of an estimated 400 light pickup trucks every day, the company said.

The new workers will boost NUMMI's annual payroll by more than $30 million to approximately $180 million. With the new hires, the company will employ about 3,600 people.

"We've never hired this many people at once, and we're still working on fine tuning the hiring process," said Michael Damer, a spokesman for the General Motors-Toyota Motor Corp. joint venture.

By producing trucks at the plant that currently manufactures Geo Prizm and Toyota Corolla subcompacts, NUMMI will avoid paying a 25 percent duty on trucks it would otherwise import.

NUMMI will activate a dormant assembly line to accommodate the new venture.

Autolatina to end output of engines for Mustang

SAO PAULO, Brazil — Autolatina, the Ford-Volkswagen joint venture in Brazil and Argentina, will end production in September of the 2.3-liter, 4-cylinder engines it exports to Ford Motor Co. for the Mustang.

Ford's engine plant in Lima, Ohio, will take over as the source when Brazilian production ends.

The end of the export operation, which Autolatina blames on the government's policy of overvaluing the cruzado, means the loss of 1,400 jobs at the plant in Taubate.

Taubate began producing engines for the United States in 1974. It also makes engines for the company's subsidiary in Argentina, where it is used in the Sierra.

Autolatina said Dearborn last year asked for price quotations from three engine plants: Taubate, Lima and one in Mexico. Sources here said Lima won with a $300-per-unit advantage over Taubate.

East Germans court Mitsubishi Motors

TOKYO — The East German government has asked Mitsubishi Motors Corp. to consider setting up production there, according to Hirokazu Nakamura, the auto company's president.

The proposal was made to a Mitsubishi representative who was invited to East Berlin by the East German Ministry of Machine Building Industry.

Mitsubishi has been looking for a joint-venture partner in Western Europe, and still prefers a partner in the West rather than the East. Nakamura said both projects might be possible, but at different intervals.

Mercury drops a hint on Tracer, Capri prices

DETROIT — Ford Motor Co. said last week that the base price of the least expensive Mercury Tracer model will be between $8,000 and $9,000 and the base price of the least expensive Capri convertible will be less than $13,000. The least expensive 1989½ Tracer is $8,672. The Capri is an all-new car for Mercury.

The Mexican-built subcompact Tracer, based on the Mazda 323, will debut in May. The Australian-built Capri, also based on the 323, is scheduled to arrive in June.

Automakers urged to promote retrofit kits for rear seat belts

WASHINGTON — The Institute for Injury Reduction is promoting a plan to retrofit about 140 million pre-1990 cars with rear shoulder harnesses to complement existing rear lap belts.

It says at least 1,000 fatal or severe injuries occur each year to rear-seat passengers wearing lap belts only.

The plan calls for automakers and dealers to stock and promote replacement kits costing no more than $50. The current average is $270.

The institute also wants the government to warn motorists of the dangers of using rear lap belts only and insurance companies to give discounts for retrofitted cars.

Jerry R. Curry, administrator of the National Highway Traffic Safety Administration, said the agency will pressure manufacturers to make the kits available and affordable. But he said "the real epidemic" is not injuries from rear lap belt use but those that result from wearing no safety belts at all.

Chrysler mails checks in odometer settlement

HARRISBURG, Pa. — Chrysler Corp. has mailed $500 checks to 1,700 Pennsylvania owners of Chrysler Motors vehicles that were test-driven with their odometers disconnected, according to the Pennsylvania Attorney General's Office.

An estimated 27,000 consumers nationwide will receive $13.5 million in refund checks under a federal court settlement of litigation brought in 1988 against Chrysler by several state attorneys general. The lawsuit charged that Chrysler employees and executives drove new cars on overnight test drives without connecting the odometers.

All affected vehicles were identified through Chrysler records.

Yugo America mails $1.7 million to dealers

NEW YORK — The newly reorganized Yugo America Inc. mailed its first checks to dealer creditors last week, totaling $1.7 million.

The payment represents 50 cents on the dollar for Yugo dealers who were owed money, mostly for warranty work, when the importer and distributor filed for Chapter 11 bankruptcy on Jan. 30, 1989.

The dealers are scheduled to get two more installments, each worth 25 cents on the dollar, each time Yugo wholesales another 20,000 cars. The company sold 10,576 in 1989.

Yugo's other unsecured creditors voted to accept an offer of 9 cents on the dollar, which will come due in May.

GE Capital buys McCullough leasing

EDEN PRAIRIE, Minn. — GE Capital Fleet Services has acquired McCullough Leasing of Roseville, Mich., for $450 million from the Bank of New England.

McCullough Leasing, which has 50,000 vehicles, will operate as a separate division of GE Capital Fleet Services. GE Capital Fleet Services manages more than 450,000 vehicles and is the largest fleet-management company in North America.

McCullough Leasing, in its 41st year, will continue operating under present management.

GE Capital Fleet Services is the vehicle fleet management subsidiary of GE Capital Corp. of Stamford, Conn.

BRIEFLY: *GM cancels dealer council after dealers deem it 'ineffective'*

General Motors has canceled its annual President's Dealer Advisory Council for 1990, breaking a 55-year tradition.

About 50 U.S. and Canadian dealers, most of whom are selected by GM, have traditionally gathered in Detroit for three days to discuss matters of mutual interest with GM brass.

GM canceled this year's council meeting because dealers felt some aspects were ineffective, said Robert Ogden, general director of sales operations and dealer operations on GM's customer sales and service staff.

Dick Smith of Royal Oldsmobile-Jeep-Eagle in Charleston, W.Va., and the GM line group representative for the National Automobile Dealers Association, said he and other dealers have long felt the council is ineffective and have pressed for another forum.

"It tended to be a show-and-tell by GM," said Smith, who attended the last two council meetings. "The factory told us what was going on."

Other dealers complained the council was more of a social gathering than a business meeting.

ON CLOUD NINE: Ron Tonkin, NADA president and Portland, Ore., megadealer, says he expects "positive results" from his meeting last Thursday with **Chrysler Corp.'s** board of directors.

"I am absolutely on cloud nine," Tonkin said after the meeting. "I think I could fly to Portland without a plane."

Tonkin said his scheduled 25-minute presentation stretched to 90 minutes and his remarks twice elicited applause.

Tonkin also had a private tete-a-tete with Chrysler Corp. Chairman Lee Iacocca and Chrysler Motors chairman Bennett Bidwell.

ALL IN A NAME: Integral to the launch of **Volkswagen of America's** new Fahrvergnugen advertising campaign is a stick-figure driver that grows out of the company's VW logo. What to call this critter has been the subject of debate; thus far, it's affectionately known as Mr. Fahrvel. To come up with a proper handle, VWoA officials will announce a companywide contest. No word on the winner's prize and no word yet on the contest deadline. You can be sure as soon as they know what to call it, so will you.

TOO MANY CHIEFS: Could it be that **Chrysler** has too many executives and not enough titles since the company disbanded its holding company structure at the end of last year?

Top brass of Chrysler Motors still identify themselves as executives of *Motors*, now a division of Chrysler Corp.

But official company biographies identify less-high-ranking people as personnel of Chrysler *Corp.*

With a chairman and vice chairman at Chrysler Corp. and a chairman and president at Chrysler Motors maybe the company just ran out of titles.

ANY COLOR YOU WANT, AS LONG AS . . . : At **Subaru-Isuzu of America Inc.** startup, the Isuzu pickups were coming off the line in black, white, violet and red. As the line speeded up, three colors of the PPG paint had problems, and "now I've got red pickups all over the country," said American Isuzu boss Jack Reilly. Of the first 2,400 vehicles, 1,900 were red.

Chassis shortage on the horizon?

Downtime at Big 3 plants causes concern among officials

By Joseph Bohn
AUTOMOTIVE NEWS STAFF REPORTER

The van conversion market has been strengthening, leading a Chevrolet official to express concern that if a traditional spring upturn develops, there may be some chassis shortages.

Separately, Ford is preparing to announce changes to its consignment pool program.

Typically, van manufacturers produce extra chassis in January to prepare for the spring market.

But General Motors had five weeks of downtime last month, including three at Scarborough, Ontario, and two at Lordstown, Ohio. Ford was down two weeks at Lorain, Ohio, and Dodge was down two weeks at Windsor, Ontario.

Industrywide, the days' supply of full-sized vans is still high; but the numbers are based partly on 10-day sales reports and can change rapidly.

As of Jan. 20, Chevrolet had a 145-day supply of full-sized vans; Dodge, a 139-day supply; and Ford, an 87-day supply. A 60-day supply is considered normal.

Inventories of raw van chassis in converters' hands and finished units at dealerships have been dropping steadily and are considerably below last year, according to auto company officials.

James Greene, Chevrolet assistant RV sales manager, said, "The reports I get from our major upfitters say their business has picked up considerably in the last two weeks. Their dealer inventory is well under control.

"Given we have a spring market, there could be a real chassis shortage in March."

Greene recently spent a week in Elkhart, Ind., helping converters plan for spring.

Converters have, so far, been largely engaged in a pricing war that appears to be taking the biggest toll on medium-sized companies.

Meanwhile, Ford anticipates some increased business as a result of signing new converters, Jerome Mittman, Ford Division RV sales manager, said.

Ford signed Seven-O-Seven Industries of Elkhart as the first of five new accounts it plans to add to its consignment pool during the next few weeks.

Ford also plans to announce changes and revisions to its consignment pool program within days, Mittman added.

The changes will be phased in gradually over two to three years so all Ford converters have a chance to adjust to them and continue their operations without disruption.

The company plans a long-term change in its distribution system, with the goal of having all its van conversions sold through Ford dealerships. The goal is to improve the end-quality of the product and customer satisfaction, Mittman said.

"It's a phase-in strategy, rather than an abrupt change. We're not going to put people out of business. We'll be working with customers, dealers, pool and non-pool converters to bring about a gradual change," he said.

As part of the plan, Ford will add consignment pool accounts.

The company has seen improvements in the marketplace recently "from most segments, including the van conversion and fleet business," Mittman said.

"If the trend continues, it will support continued production without any downtime," he added.

"Inventories at dealerships have been declining. If there is any upturn in the market, it should produce significant demand for van production. The next 30 days should tell us" how spring market demand will shake out.

Zimmer to display new design at NADA

Zimmer Motor Vans of Boca Raton, Fla., created this front clip design for its GMC and Chevrolet full-sized conversions that it will display at the National Automobile Dealers Association convention later this week. The company has become closely affiliated with Winston Cup racing. It builds a Dale Earnhardt signature series Blazer under license and soon will begin selling a Richard Petty model.

RV BRIEFS

Van conversions at NADA

The van conversion industry, projected to end 1989 virtually on a par with its record-breaking 1988 shipment figures, will be well represented at the National Automobile Dealers Association convention later this week.

The Recreation Vehicle Industry Association will have a booth at the show stocked with the latest materials for dealers. A complete guide to van conversions is also being delivered to dealers' hotel rooms on Saturday as a wrap-around for the *Las Vegas Review-Journal*.

The guide lists RVIA van converter member companies, including contacts, addresses and phone numbers.

RVIA is also offering the "Family Guide to Van Conversions" as a marketing tool. The four-page guide originally appeared in *USA Today*. It was reprinted in bulk without advertisements and dates for long-term promotional use.

Free introductory supplies of 150 reprints may be ordered at the booth by dealers, converters and their advertising agencies.

Information about the association's van safety program is also available at the booth.

David J. Humphreys, RVIA president, will address van sales opportunities in interviews with Visitors Television Network during the show. Visitors Television is a video production group providing daily show coverage through a closed circuit television system in area hotels.

NVCA sets show dates

The National Van Conversion Association of Greenfield, Ind., has scheduled its 6th annual Supplier Showcase show for April 11 and 12 in downtown South Bend, Ind.

The two-day industrial event will feature exhibits from 140 suppliers of products for van conversions, pickup trucks and RVs.

The event was expanded last year to accommodate additional exhibitors. It drew purchasers from 35 states, Canada and the Caribbean, according to an association spokesperson.

This year's show will provide extra space for suppliers of vehicle ground effects equipment and accessories for pickups.

Holiday Rambler realigns

WAKARUSA, Ind. — Holiday Rambler Corp., a wholly owned subsidiary of Harley-Davidson Inc., restructured its RV division so a number of its key officials report directly to H. Wayne Dahl, president of Holiday Rambler.

Donald J. Walter, president of the Recreational Vehicle Division, resigned in late 1989, paving the way for the realignment in the reporting procedure which went into effect in mid-January.

Recreational Vehicle Division executives now reporting directly to Dahl include: Fred E. Emmert, vice president of sales, marketing and distribution; Anthony J.J. Dibiagio, vice president of manufacturing operations; James V. Stover, vice president of production definition; Michael R. Myers vice president/controller; Richard E. Bond, vice president, general counsel and secretary; and Hugh J. Ogren, vice president of human resources.

Dahl felt the change would improve the company's response time to customer needs, and also its quality and price competitiveness.

Glaval's new van combines luxury, utility

By Joseph Bohn
AUTOMOTIVE NEWS STAFF REPORTER

Glaval Inc. is seeking to expand the traditional van conversion segment with a new vehicle that doubles as a luxury van and utility hauler.

The Half Back model, scheduled to be formally introduced at the National Automobile Dealers Association Convention in Las Vegas this week, has a luxury upfitted front-passenger area that seats five people, and a partioned, enclosed rear area for cargo-carrying.

The cargo area of the Half Back is a self-contained unit, separated from the passenger area by a middle divider wall with an access window and privacy curtain. When the window is closed, the cargo area is sealed and virtually soundproof. It is also equipped with a second rear heater and air conditioning unit.

With a 135-cubic-foot utility compartment, the rear is big enough to carry garden tractors, snow blowers, lawn mowers, chain saws or 16 sheets of 4x8-foot plywood, according to William T. Becker, Glaval's vice president of marketing, advertising and consumer relations.

Becker believes that the van will also attract people who spend a lot of time on the road and have specialized hauling needs, such as dog and horse breeders, exhibitors, antique collectors, photographers and outdoor enthusiasts.

Glaval's Half Back conversion combines luxury and utility.

Glaval is offering the new conversion in six trim packages on the full-sized Chevrolet, Ford and GMC van chassis. It will be available on the full-sized Dodge chassis March 1.

Standard equipment includes color television, videocassette player, separate rear stereo with headphones, solid oak consoles and trim, and Italian leather on the seating surfaces.

Glaval has sold about 55 Half Backs with the regular roof design. It recently introduced a raised-roof model for better placement of the rear overhead television and more interior stand-up room.

The Charleston trim Half Back built on a Chevrolet/GMC chassis with a 350 V-8 or a Ford chassis with a 351 V-8 has a suggested retail price of $23,700, with room for discounts to consumers, he said.

Aero pickup

GST Industries of Madison, Wis., uses a full aero package to create Aerosportster models from GM half-ton, short-bed pickups.

Nissan tops Mexico's '89 sales

By Stephen Downer
STAFF CORRESPONDENT

MEXICO CITY — Nissan Mexicana S.A. de C.V captured the Mexican vehicle sales crown for the third straight year in 1989, even though its market share dipped 3.3 percentage points.

But each of the five Mexican automakers had something to boast about. Nissan and Chrysler Mexico S.A. held on to their respective No. 1 and No. 2 slots, respectively, while increasing sales and losing market share. But Ford Motor Co. S.A. de C.V., Volkswagen de Mexico S.A. de C.V. and General Motors de Mexico S.A. de C.V. each increased sales by more than a third, significantly narrowing the gap in the country's sales standings.

Total Mexican sales jumped 26 percent last year as the country enjoyed another year of reasonably stable prices. Government wage and price controls, which are due to expire this summer, have reduced the annual inflation rate from about 200 percent several years ago to about 20 percent.

Nissan finished the year with 21.9 percent of the total vehicle market. Chrysler saw its share fall to 20.6 percent from 23.4 percent the year before, according to preliminary industry figures.

Ford's share rose to 19.8 percent, from 18.3 percent; VW to 19.4 percent from 17.5 percent; and GM to 16.4 percent from 14.2 percent. Altogether, 426,507 vehicles were retailed, compared with 339,132 in 1988. Of those, 268,547 were passenger cars and 157,960 trucks, buses and other commercial vehicles.

MEXICAN CAR SALES

	Cars		Trucks		Total	
	1989	1988	1989	1988	1989	1988
Nissan	69,751	61,497	25,429	25,157	95,180	86,654
Chrysler	54,055	48,945	35,561	31,599	89,616	80,544
Ford	46,846	32,886	39,218	30,017	86,064	62,903
Volkswagen	75,620	53,485	8,882	6,812	84,502	60,297
General Motors	22,275	15,172	48,870	33,562	71,145	48,734
TOTAL	268,547	211,985	157,960	127,147	426,507	339,132

VW passed Nissan to capture the No. 1 spot in the passenger-car segment. A 41.4 percent increase hiked its market share to 29.2 percent.

Nissan was second-best with a 25 percent share, following a 13.4 percent sales increase. It was followed by Chrysler, whose 10.4 percent increase gave it a 20.1 percent share of the market.

Ford's car share climbed to 17.4 percent, on the strength of a 42.4 percent sales increase.

GM used a 46.7 percent increase to boost its market share to 8.3 percent.

GM was the top commercial vehicle retailer for the third year running. A 45.6 percent increase in sales gave the company a 29.4 percent market share. It was followed by Ford at 23.6 percent; Chrysler, 21.4 percent; Nissan, 15.3 percent; and VW, 5.3 percent.

Mexico's top-selling vehicles in calendar 1989 were the 4-door model of Nissan's Tsuru 2 sedan. With 48,195 sales, it claimed a 17.6 percent share of the passenger-car market. It was followed by the VW Beetle, 32,545; Ford Topaz, 27,550; and Chrysler Shadow, 17,106.

Industry projections for 1990 sales vary from VW's 494,500 to Ford's 410,000. Chrysler, GM and Nissan all believe that at least 450,000 vehicles will be sold.

Ex-Nissan worker resubmits complaint

By Lindsay Chappell
AUTOMOTIVE NEWS STAFF REPORTER

SMYRNA, Tenn. — A former Nissan Motor Manufacturing Corp. U.S.A. employee has resubmitted an unfair labor practices complaint to the National Labor Relations Board.

Former worker Buddy Shonting, an outspoken supporter of unionization during last summer's failed UAW election at Nissan's Smyrna plant, has charged for the second time that he was fired in retaliation for his union activities.

The charges, which have been denied by the company, were withdrawn from consideration last year for lack of evidence, according to Shonting. He said he has since obtained sufficient evidence, but he declined to elaborate.

Federal law requires grievances to be filed within six months of the alleged incident. For Shonting, who is now employed by the UAW as a union organizer, the deadline is Feb. 6.

Beiber urges unions to unite

BARCELONA, Spain — UAW President Owen Bieber urged union leaders around the world to stand together to fight what he termed increasing "anti-union aggressiveness" on the part of employers.

"In the long run, there is only one answer to the international power of corporations, and that is the international power of unions," he told a meeting of the International Metalworkers Federation during the World Auto Congress convention.

Bieber said major challenges facing unions include global overcapacity and the effect of trade imbalances caused by the internationalization of the world auto industry.

He praised European government officials for being more protective of their workers than U.S. officials, but he warned that there have been instances in Europe where governmental action also has hurt the union movement.

1989

FROM PAGE 1

Inc., American Honda Motor Co. Inc. and Nissan Motor Corp. in U.S.A. Those gains came despite decreases in truck sales at Toyota and Nissan. Honda sells no trucks.

Ford Motor's sales underlined a trend that was repeated throughout the industry, from European importers to the Big 3 and even to such import sellers as Honda's Acura Division, where the new Integra was up and the older Legend was down. The trend: New cars sell better than old.

Ford's new Thunderbird and Probe and the redesigned Lincoln Town Car picked up both market share and sales volume even though overall car sales in the United States dropped 6.83 percent. But older cars such as the Escort, Tempo, Mustang and even the popular four-year-old Taurus slipped in 1989.

Analyst Keller, a managing director with the New York investment firm of Furman Selz Mager Dietz & Birney, said newer cars traditionally sell better because "the new car tends to get a lot more advertising focus, and there's always the 'I want to be first on the block.' The fleet market also tends toward new cars."

But Keller said, "What was extraordinary in a more cosmic sense was that in the 1980s, General Motors had more new cars than everybody else . . . and its share collapsed."

In 1989, GM's new "old" cars sold best. The Buick Riviera and Cadillac DeVille and Fleetwood models were redesigned and lengthened for 1989 to be reminiscent of their counterparts of the past. Meanwhile, the all-new GM10 mid-sized models sold poorly, requiring hefty cash rebates.

While the Japanese conquered big U.S. territory in car sales, a 25 percent tariff on imported 2-door trucks, combined with a continuing slide in Japanese trucks, helped the Big 3 avoid a rout on total vehicle sales. By nameplate, the combined car and truck shares of U.S. makers dropped only from 74.18 percent in calendar 1988 to 73.48 percent in 1989.

Japanese truck sales dropped 11.55 percent to 620,192 last year, while Big 3 light-truck sales dropped just 2.71 percent to 4,055,321. Major Japanese manufacturers are bringing 4-door sport-utilities to market to avoid the truck tax on 2-door models.

On the car side, the Japanese transplants gave Japanese-built autos startlingly high U.S. penetration. When U.S.-badged imports and transplant-built cars are added to Japanese-badged cars, Japanese penetration of the U.S. car market crashed through the 30 percent barrier for the first time, to 30.76 percent. The overall car-share gain in a single year was 3.67 points.

But trucks slowed the Japanese onslaught. Japanese truck sales are on "a continuing long-term slide," Keller said. Since dealers with Japanese franchises no longer have to sell low-margin trucks in order to receive scarce cars, the dealers no longer push Japanese pickups, she said.

While Ford's combined car and truck share edged up to 24.61 percent in 1989 from 24.26 percent in 1988, GM and Chrysler Motors each dropped about a half point.

Automotive News Staff Reporters Laura Clark, Mary Connelly, Jim Henry, Michelle Krebs and Jesse Snyder contributed to this report.

GENERAL MOTORS: *'Year of the General' depends on product*

By Michelle Krebs
AUTOMOTIVE NEWS STAFF REPORTER

DETROIT — General Motors Chairman Roger B. Smith has touted 1990 as the "Year of the General," as he predicts the automaker will recoup a point of car and truck market share this year.

Smith and other GM executives believe a host of new products will add share. Among those products are the all-purpose vans, 4-door sport-utilities, GM10 sedans, redesigned Chevrolet Caprice and additions to the Chevrolet Geo line.

GM executives have predicted increased share before, including for 1989. But GM continued to lose market share last year.

GM's share of the total U.S. car and light-truck market slipped just over a half of a percentage point to 35.10 percent in calendar 1989 from 35.64 percent in 1988.

GM captured 34.83 percent of the 1989 car market, down 1.26 points from 1988.

GM sold 5,106,224 cars and light trucks in 1989, down 7.35 percent from 1988. Total industry sales were off about 6.0 percent.

Two GM marketing arms — Cadillac and GMC — managed to squeak out market-share gains. Buick and Chevrolet held about steady. But Pontiac and Oldsmobile lost share.

GM was hardest hit as its new line of mid-sized cars, known as the GM10 cars, have yet to fill the gap in GM's middle.

GM gained in areas where it returned to its heritage. Cadillac and Buick luxury cars that were redesigned in the fashion of their pre-1980s counterparts did well in 1989.

Buick basically held steady at 5.50 percent of the car market, compared to 5.49 percent in 1988. The division's 1989 sales totaled 542,917 cars, off 6.6 percent from 1988.

Buick remains far off its high point of the decade when it owned 9.23 percent of the car market in 1983.

For 1990, Buick General Manager Edward Mertz predicts it will capture 6 percent of the car market with the mid-year introductions of the Regal sedan and the Reatta convertible.

GM executives have predicted increased share before, including for 1989. But GM continued to lose market share last year.

Buick's success stories in 1989 were the LeSabre, Riviera and Reatta.

LeSabre sales were buoyed by being named the highest-quality car built in America by J.D. Power and Associates, a market research firm in Agoura Hills, Calif. Sales of the luxury Riviera, lengthened and redesigned to look more like the Rivieras of the past, more than doubled in 1989.

Cadillac closed the calendar year with 2.7 percent of the car market, up from 2.5 percent in 1988. Its sales increased slightly to 266,899 in 1989.

Cadillac's gains came from higher sales of the DeVille and Fleetwood, redesigned and lengthed in 1989 to appeal to buyers of past Cadillacs. Even sales of Cadillac's flagship Allante, which in raw numbers do little to boost Cadillac's sales total, picked up steam.

Cadillac General Manager John Grettenberger said the division expects to gain market share and sales volume in 1990. He predicted Cadillac will hold volume to 267,000 units while industry sales drop.

Ford Division beat Chevrolet in both car and truck sales 1990 for the third consecutive year. The gap between Chevrolet and Ford car sales widened between 1988 and 1989. But Chevrolet closed the gap in trucks.

Chevrolet's car market share slipped to 13.67 percent from 13.97 percent the year earlier. Its truck share dipped nearly a half a point to 28.33 percent. Sales of nearly every car model in Chevrolet's line dropped.

Sales of the consolidated Geo line totaled 212,426 in 1989, off 1.4 percent from Chevrolet's pre-Geo imported and joint-venture cars in 1988. But Geo sales appear to be off to a stronger start in the 1990 model year, probably because of a new advertising campaign and boosted ad spending.

Oldsmobile's 1989 sales and share sank to their lowest levels of the decade. The division ended the year with 6.08 percent of the car market, down from 6.75 percent in 1988.

Oldsmobile's high point for car market share during the decade was in 1983 when it captured 11.0 percent. From 1983 to 1986, Oldsmobile had four consecutive years of more than 1 million annual sales.

Oldsmobile suffered a sales drop of more than 10 percent for every model in 1989.

Oldsmobile General Manager J. Michael Losh, who took over the division last June 1, said the division's substantial sales drop during the 1980s can be traced to three factors, each of which accounts for about a third of the drop.

- Oldsmobile, the contemporary family division of GM, lost sales to the vehicles more contemporary families opted for in the 1980s — minivans and sport-utilities.
- Oldsmobile lost its bread and butter market of the mid-sized family cars to Ford Motor Co.'s Taurus and Sable.
- Another third of the sales drop went to imports, primarily the Honda Accord.

Losh predicts Oldsmobile's market share will edge upward for 1990, though he won't speculate how much. The redesigned Toronado as well as two trucks, the Bravada and Silhouette, should boost Oldsmobile sales, he said.

Pontiac, GM's turnaround darling of the 1980s, saw sales drop and market share dip nearly a half a point in 1990. Its car share slipped to 6.88 percent from 1988's 7.36 percent — the division's high point for market share during the decade. Pontiac sales fell 12.86 percent to 678,968.

Still, Pontiac was the only GM division to end the 1980s with a bigger share of the car market than it had at the start of the decade.

The sales drop — and increases at Honda and Toyota — bumped the division from the third spot in 1988 car sales to fifth in 1989 after **Ford, Chevrolet, Honda and Toyota.**

Chrysler extends guarantee; GM has new round of rebates

By Arlena Sawyers
AUTOMOTIVE NEWS STAFF REPORTER

Chrysler Motors, General Motors and Mitsubishi Motor Sales of America Inc. extended or enhanced their incentive programs last week while other manufacturers allowed programs to expire.

In a commercial during the CBS Super Bowl pre-game television show, Chrysler Corp. Chairman Lee Iacocca announced that the carmaker was extending its guaranteed rebate program through Feb. 28 and adding more cars and pickup trucks.

Announced last December, the program guarantees that if customer incentives on eligible 1990 vehicles purchased or leased increase from Feb. 1 through Sept. 30, Chrysler will pay the difference to the buyer.

Chrysler added these 1990 vehicles to the guaranteed program: $2,000 on Dodge Ramcharger; $1,500 on Dodge Monaco ES and full-sized Ram Van conversion models with a specific level of van conversion package; $1,000 on Plymouth Horizon, Dodge Omni, Chrysler LeBaron sedan, Dodge Monaco LE, Dakota S, 2-wheel-drive and 4-wheel-drive diesel pickup, full-sized Ram Van and Ram Wagon, Comanche and Grand Wagoneer; and $500 on Wrangler.

Guaranteed rebates on the Dodge Caravan, Plymouth Voyager and Chrysler Town & Country minivans expired Jan. 31. Other guarantees are unchanged.

Chrysler added 1990 import models to a non-guaranteed rebate program: $1,000 on Dodge and Plymouth Colt GL and GT and Eagle Summit; and $750 on Dodge and Plymouth Colt base models, wagons and Vistas, $750.

Pontiac is paying customers $1,000 on all 1989-90 models except LeMans and Sunbird models, which carry $750 rebates.

In an effort to clear the way for the 1991 Firebird, Pontiac dealers are being paid $300 to $500 on each 1990 Firebird they sell. Also, Pontiac dealers earn $500 on sales of 1989 and 1990 Grand Prix.

Chevrolet is offering retail incentives on the following 1989-90 cars: Lumina, $1,000; Geo Storm, $800; Corsica/Beretta, $750; Caprice, $700; and Cavalier and Camaro, $500.

The following Chevrolet dealer incentives are in effect: 1988 Nova, $500; 1988-89 Spectrum, $500; 1989-90 Metro (except XFI) and 1990 Prizm, $1,000; 1989-90 Tracker, $1,000; and 1990 Celebrity, $500.

Buick is offering $500 to $1,250 in customer rebates on 1990 Skylark, Century, Regal and LeSabre depending on the option package purchased and $500 to $1,000 on 1990 Electra/Park Avenue, except Ultra, also depending on the option package.

Buick announced a new dealer incentive program. Payments on 1989 models are: Reatta, $2,000; Regal, $1,500; Century, $1,150; and Riviera, LeSabre, Electra, full-sized wagon, Skyhawk and Skylark, $750.

Dealer incentives on 1990 Buicks are: Reatta, $2,000; Riviera, $1,500; and Electra Park Avenue and Estate Wagon, $1,000.

Oldsmobile extended its current incentive program which pays dealers $500 to $2,500 on most car lines and customer rebates of $1,500 on 1989 Cutlass Supremes and $1,000 on 1990 Cutlass Supremes.

In lieu of cash rebates, Buick, Pontiac, Oldsmobile and Chevrolet customers may choose a finance rate of 6.9 percent on 24-, 36- and 48-month-contracts or 10.9 percent on 60-month contracts. Customer and dealer incentives for those GM divisions expire May 2.

Cadillac is offering current Cadillac owners and holders of special certificates a $1,500 rebate on all 1989 and 1990 Cadillacs except Allante. Alternative financing of 5.9 percent for 24 months, 6.9 percent for 36 months or 7.9 percent for 48 months is available.

Cadillac is paying its dealers a $1,000 bonus on sales of all 1990 Cadillacs except Allante. The Cadillac programs expire March 31.

Mitsubishi announced new dealer incentives that are scheduled to expire March 31: $1,000 on all 1989-90 pickup trucks, Montero and Galant; and $500 on 1989-90 Mirage.

Nissan dropped the dealer incentive on the 1988 Pulsar NX and extended its $1,000 dealer incentive on the 1989 Pulsar NX until March 2. The $1,000 dealer incentive on the 1990 Axxess and the $1,500 dealer cash on the 1989 Pathfinder have been extended until May 2. Nissan added the 1989 and 1990 Stanza to the program and is paying dealers $500 to $1,000 on each depending on the number sold.

Nissan is offering customers $1,000 on 1988-90 standard Sentras and $1,200 on 1988-90 Hardbody base 4x2 models. On other Sentras, dealers earn $1,000 on 1990 models and $1,250 on 1989 models. Other dealer rebates are $1,200 on the 1990 Hardbody 4x2 and 4x4 non-base models and $1,500 on the 1988-89 Hardbody 4x2 and 4x4 non-base models. The programs expire May 2.

Plants idle; truck output drops 36%

By Karen Detkowski
SPECIAL CORRESPONDENT

With many van and pickup lines idled, U.S. truck production fell 36 percent last week. Estimated January production of 243,585 was off 36.11 percent from last year's record January total.

Truck production totaled 69,203 units last week, 12.44 percent below the previous week and 27.48 percent below the year-ago week.

Last week's car output was estimated at 109,504 units, 6.97 percent below the previous week's build and 29.44 percent below the year-ago week.

Companies split last week's estimated production as follows: General Motors, 44.46 percent; Ford Motor Co., 21.20 percent; Chrysler Motors, 10.87 percent; Honda of America Manufacturing Inc., 7.97 percent; Toyota Motor Manufacturing U.S.A. Inc., 3.96 percent; New United Motor Manufacturing Inc., 3.74 percent; Mazda Motor Manufacturing (U.S.A.) Corp., 2.56 percent; Diamond-Star Motors Corp., 2.56 percent; Nissan Motor Manufacturing Corp. U.S.A., 2.17 percent; and Subaru-Isuzu Automotive Inc., 0.51 percent.

U.S. light-truck and/or van plants idle last week were Chrysler's Dodge City plant in Warren, Mich., and the Toledo, Ohio, Grand Wagoneer line; Ford's Kansas City, Mo., plant and Kentucky truck plant in Louisville; and GM's Lordstown, Ohio; Baltimore; and Pontiac (Mich.) East plants.

GM expects to resume output today at its Linden, N.J., and Oklahoma City car plants.

The plants were shut down to keep inventory in line with slow sales.

GM announced downtime this week for its Arlington, Texas, and Lakewood, Ga., plants. Both are expected to resume output Feb. 12.

GM's Fairfax plant in Kansas City, Kan., will begin one-shift operation this week and next. First and second shifts will be rotated each week.

Chrysler Motors discontinued production of its Dodge Omni and Plymouth Horizon last week at the Jefferson Avenue plant in Detroit.

Canadian cars post big gain

Canadian auto production was targeted at 24,800 units last week, 34.69 percent above the prior week and 18.04 percent above the year-ago week.

Truckmakers scheduled output of 16,394 units last week, down 0.95 percent from the previous week and down 23.35 percent from the year-ago week.

GM's Scarborough, Ontario, plant is expected to resume production of full-sized vans today. Also, GM reported that the Scarborough and St. Therese, Quebec, plants will be idled April 2 for one week.

Chrysler's Bramalea, Ontario, plant extended downtime until March 5. Chrysler's Brampton, Ontario, plant is expected to resume Jeep Wrangler output today.

NADA

Tonkin to Green: NADA passes the power

ay Green, right, takes over the presidency of the National Automobile Dealers Association Tuesday from Ron Tonkin at the group's annual convention in Las Vegas. AUTOMOTIVE NEWS/JOE WILSSENS

INSIDE:

m New York to Seattle:
orters visit 46 cities in the United States and Canada for
ailed analysis of local conditions for retail car selling. The
-by-City section, inside.

Greg Penske surveys the lot in his Longo Limo (with the fringe on top). RON HUSSEY

At Longo, the buyers come back

Repeat business helps keep Penske outlet Toyota's top deal

By Dutch Mandel
AUTOMOTIVE NEWS STAFF REPORTER

EL MONTE, Calif. — Stephane Tawaragana squirms in her leather chair. She runs fingers through the fire-engine red hair covering half her scalp; the other half is shaved punk-cut clean.

For more than an hour she has sat by the side of her father who orchestrates the negotiations at Longo Toyota.

Her boyfriend, a hard-rock music disciple with tatoos crawling up each arm, looks on impassively. Rather than be here, he and Stephane would probably rather take in a Barry Manilow concert.

But Papa Tawaragana wouldn't miss this moment — nor does he want Stephane to miss it. He wants her to learn from this transaction and enjoy it as much as he does; he reckons she'll enjoy the car long after he has bought it for her.

Papa Tawaragana has been at the tables of Longo Toyota before. Each time, he has felt he got the best of the talks.

And each time, he has returned to buy another Toyota from Longo.

That is the key ingredient to Longo's enormous success: The customers come back.

By Longo estimates, 60,000 credit-worthy folk in the greater Los Angeles area think of Longo Toyota first — not the dealership down the street, nor the four Toyota stores they pass on their way to Longo.

The Tawaragana family is proof.

Expanding this pool of future customers is just one ingredient in the recipe that has made Longo the No. 1 Toyota dealer in the United States for 21 years and placed it among the nation's top five dealers nearly as long.

Other ingredients include healthy portions of hard work, an uncommon concern for customer service, a great helping of resources and a large dose of company pride sweetened with good pay for salespeople — all stirred with the inflexible stick of rigid corporate policies of automotive magnate Roger Penske.

Those policies are nurtured and enforced at Longo by Penske's son, Greg.

Last year, Longo Toyota sold 23,058 new cars and trucks, of which about 7,100 were fleet sales. In 1989, Longo was responsible for 15.1 percent of Toyota Motor Sales U.S.A.'s sales in import-hot California. One of every 40 Toyotas sold in America comes from Longo. Every 13 minutes that Longo was open last year, a new Toyota went out the door.

For a little over four years, Longo Toyota has been part of

LABOR SHORTAGE:

Japan production could suffer if hiring continues to lag so far behind demand

By Mary Ann Maskery
AUTOMOTIVE NEWS STAFF REPORTER

TOKYO — The production pace is so intense and the labor shortage so acute that Toyota Motor Corp. is sending clerical workers, technicians and new recruits on to the lines to fill in the gaps.

If things continue at this rate, according to Vice Chairman Tsutomu Ohshima, Toyota will fall 50,000 to 60,000 units short of its production target for the year.

Toyota hired 1,900 temporary workers in 1989 to fill out a work force of 25,400. But still there are not enough workers.

"Even Toyota is finding it difficult to hire workers," Ohshima said, "and the situation is much more severe for the suppliers."

Toyota has a 5-year plan to more than double automation in its plants. It intends to install up to 4,000 robots at a cost of approximately $138,000 each — a total investment of up to $550 million.

Toyota and its affiliated suppliers are competing for the same people in the same pool, the Aichi district in central Japan.

> They (suppliers) are running at over-capacity, but they're still losing money.
>
> **Koji Endo**
> Nomura Securities

Nissan Motor Co. is using flexibility as a standard in applying automation in the new assembly plant it is building in Kyushu.

Some plants in Europe and the United States are already 20 to 50 percent automated in final assembly. Nissan averages 5 percent but plans to raise that to 20 to 30 percent by 1993.

The company estimates that is

GM looks to the East as it maps '90s growth

By Michelle Krebs
AUTOMOTIVE NEWS STAFF REPORTER

DETROIT — General Motors, encouraged by its strong performance in markets outside North America, has expansion plans for Eastern Europe and the Asia-Pacific region in the 1990s.

John F. "Jack" Smith Jr., GM executive vice president in charge of overseas operations, said GM is exploring opportunities in Eastern Europe, the Soviet Union and Asia-Pacific. Those markets will account for the bulk of GM's overseas growth in the 1990s, he said.

Despite an eroding market share and declining profits in North America, GM last week announced that vehicle sales outside North America reached a record 2.32 million in 1989. Analysts predict GM's overseas operations also will report record profits for 1989. GM Europe's 1989 profits are expected to exceed $2 billion, surpassing 1988's $1.8 billion. GM will announce 1989 earnings this week.

"It is not just Europe," Smith said. "We had a super year in Latin America. We saw good results and great growth opportunities in Asia-Pacific as well. All of our markets have been very strong."

For 1990, Smith predicted a sales dip in Europe. But he noted that a slowdown has been expected for three years and has yet to occur.

Smith said Latin America is a question because of a new government in Brazil that must deal with serious economic problems.

He said GM sees substantial new opportunities developing, primarily in Eastern Europe and Asia-Pacific.

GM is focusing much of its attention on Eastern Europe and how it can tap the potential of what appears to be a large market. The automaker has a study in progress to determine the size of the new-vehicle market.

"We know those are strong markets," Smith said. "They have very old cars that in every country need updating. All the manufacturers know and understand that."

In addition, demand exists for emissions-control technology and larger engines.

GM is looking closely at East Germany, Czechoslovakia and Poland, where it hasn't done much business in recent years, but where it has historical ties.

He characterized GM as "exploring the possibilities."

"And, of course, we are not alone," he added.

Likewise, GM is talking with the Soviet Union, though Smith refused any details of those discussions. Smith said the talks don't involve the Soviet Union's Gorky plant where plans are in the works to replace the mid-sized Volga line. Ford Motor Co. abandoned talks with the Soviet Union regarding that plant.

"It's too early to discuss anything concrete," Smith said. "We had discussions in Russia and continue to have discussions."

The talks are a reversal of GM's previous stand. About 18 months ago, Smith said GM had little interest in business there. "There have been some programs that make some sense to us," Smith said recently. "We've been working hard to try to work them out."

He envisions that any Eastern European effort would be through a joint venture.

Jack Smith, rising GM star

Another Smith on GM fast track

By Michelle Krebs
AUTOMOTIVE NEWS STAFF REPORTER

DETROIT — When John F. Smith Jr. ran General Motors' European operations, he had a clear strategy for tackling costs and boosting profits.

As president of GM Europe, Smith, who goes by the name Jack and isn't related to the other Smiths in top GM jobs, squeezed additional production from existing plants. He pumped funds into new-product development rather than brick and mortar. And he encouraged use of GM components.

The strategy resulted in GM Europe going from a $343 million loss in 1986 to record profits in 1989. Analysts predict the 1989 profit exceeded $2 billion, another record.

Smith, as GM's first executive vice president in charge of overseas operations, has been implementing the same strategy throughout GM worldwide.

The results are expected to be equally as successful and give Smith — 52 in April — a good shot at one of GM's top jobs.

To that, the unpretentious Smith, known to show up at company picnics in Europe wearing blue jeans, responds with the reply he appears to have practiced during his many years on GM's fast track: "I do not know anything about that. I am focused on this job and that is really all I am interested in."

Some industry observers expect Smith to be named to one of GM's top posts in the management shuffle brought on by the Aug. 1 retirement of Chairman Roger B. Smith.

During his 19 months in GM's top overseas job, Smith has played a key role in some major international ventures that put GM in a good position to capitalize on developing markets, including a joint venture with Saab-Scania AB and with Raba, the Hungarian truckmaker.

Smith was on a fast track before he went to Europe in 1986 from the post of president of General Motors of Canada.

Smith, who came up through the finance ranks, led the GM negotiating team that set up the landmark New United Motor Manufacturing Inc. joint venture with Toyota. He served from 1966 to 1976 on the GM financial staff in New York.

Volvo GM holds ground in Class 8 sales, eyes third place

By Joseph Bohn
AUTOMOTIVE NEWS STAFF REPORTER

Volvo GM Heavy Truck failed to capture third place in Class 8 sales last year but with added production capacity, officials are gearing up for another try this year.

The company has been largely targeting third-place Mack in its efforts to move up in sales. Mack, which has run into financial and other problems, saw its U.S. Class 8 retail sales drop 12.87 percent to 19,035 in calendar 1989.

Volvo GM's sales of 17,340 were up 1.47 percent.

Volvo GM officials blamed product shortages for costing them 1,500 sales last year which would have put them in close contention with Mack.

Officials are projecting 18,000 U.S. sales this year in a softer market. Truck industry officials are forecasting U.S. Class 8 sales of 120,000 to 144,000 vehicles this year compared to 145,068 in 1989.

Hans Alftren, manager and production coordinator, Volvo GM, said that with the company's increased production capacity of 93 trucks a day, it is able to produce 21,500 trucks this year. Last year, it had a 73-unit-a-day capacity.

Present capacity allows it to sell 19,000 trucks in the United States and 2,500 in Canadian and overseas markets, he added.

The company plans to increase capacity to 115 trucks a day during 1991-1992, if the market rebounds as anticipated.

A second shift will be added to the Orrville, Ohio, plant, doubling the plant's capacity to 40 vehicles a day. The plant's topcoat painting operation will also be expanded, Alftren said.

The company also plans to add two trucks a day to its Ogden, Utah, plant capacity, increasing production capability to 15 trucks a day.

More immediately, Volvo GM officials feel the first half of 1990 will be weak, but the second half will show a rebound, based on faster gross national product growth and pre-buying by customers to avoid 1991 emissions regulations and price hikes.

Thage Berggren, president and chief executive officer of Volvo GM, was also optimistic about company sales because of "important second orders" from a number of major fleet buyers. Along with private fleet orders, the company picked up a United States Postal Service order for low cab forward trucks.

Larry Oliphant, recently named president of Volvo GM Canada and previously the U.S. company's top sales executive, said the company started 1990 with a backlog of 6,600 truck orders compared to 6,300 a year ago.

He forecast that the for-hire carrier buying segment will continue to increase in the 1990s, while the private carrier buying segment would decline.

He also sees full-service leasing continuing to increase.

The independent carrier buying segment will "likely" decline and the government segment will remain about the same, Oliphant said.

Volvo GM's sales are "reasonably balanced" between geographic market segments and different buying groups, he added.

A major goal is to "develop our dealer network to become a consistent performer in North America by reaching an operating level of 25,000 trucks with an appropriate return on capital," Oliphant said.

The company now has 192 dealers, 120 of which are exclusive WhiteGMC dealers.

In 1989, 4 dealers sold more than 500 trucks, 16 sold more than 200 and 48 sold more than 100 trucks. The company's most successful dealer retailed 1,153 trucks last year.

Volvo GM plans to increase sales of its proprietary componentry in its vehicles.

Officials credited the availability of exclusive Volvo-built drivelines for part of the success of the domestically produced Autocar.

Volvo GM offers Volvo engines and transmissions in the Autocar, as well as T-ride suspensions whose sales doubled in 1989 and front axles whose sales increased "sevenfold," according to Oliphant.

The company launched a number of support programs, including 48-hour parts shipment guarantees, to further bolster Volvo component sales in 1990.

TRUCK BRIEFS

Eaton buys Microflex

CLEVELAND — Eaton Corp. has acquired a majority of the assets of Microflex Inc. NC, a developer of software products. The companies declined to detail terms of the transaction.

Microflex of Winston-Salem, N.C., is a developer of micro-electronic diagnostic technology used in the trucking and automotive industries. The company is operating as part of Eaton's Drivetrain Systems Division, headquartered in Galesburg, Mich., and Hounslow, England.

John S. Rodewig, Eaton vice president, Truck Components Operations/Worldwide, said Microflex's software experience in truck maintenance systems will help Eaton develop an integrated drivetrain systems capability.

The acquisition will help Eaton become a major global supplier of customer-specified integrated drivetrain systems and microprocessor-based components for commercial vehicles, he added.

Durakon retains Jerr-Dan

LAPEER, Mich. — Durakon Industries said that the stock purchase agreement with a subsidiary of Century Group Inc. to sell its Jerr-Dan Corp. has been terminated.

Jerr-Dan, a wholly-owned subsidiary comprising Durakon's vehicle transportation and towing segment, will be retained by the firm.

"The market for Jerr-Dan products remains strong, and we will mount an aggressive campaign this year to increase sales and support Jerr-Dan's growth," said David Laro, Durakon president.

Durakon had originally planned the sale of Jerr-Dan to reduce its long-term debt. It is headquartered in Greencastle, Pa., with locations in California, Georgia, Illinois, Missouri and Ohio.

Ford offers Series 60

DEARBORN, Mich. — Detroit Diesel Corp. will supply Series 60 premium diesel engines for Ford Class 8 L-series trucks in 1991, according to Kenneth F. Smith, Ford heavy truck general operations manager.

The engine will be added to Caterpillar and Cummins diesels as a regular production option for 1992 models delivered in the fall of 1991, Smith added.

Ford made the move in response to customer requests.

The company has already received an order for 75 AeroMax 9000 heavy trucks with the Series 60 engine, which will be delivered this summer, Smith said.

Freightliner used trucks

PORTLAND, Ore. — Freightliner Corp. has initiated a used-truck program to enhance the attractiveness of its dealerships as a place to buy such vehicles.

Under Freightliner's Select Used Truck program, vehicles are hand-picked, put through various engine, transmission and driveline checks and reconditioned before being certified.

The company also offers a 1-year, 100,000-mile warranty on the vehicles. It provides 100 percent coverage on parts and labor for the drivetrain, cab, frame rails and crossmembers, with very few exclusions.

Freightliner also offers special financing packages for the vehicles through its Mercedes-Benz Credit Corp. and through Associates Commercial Corp., the commercial finance subsidiary of The Associates in Dallas. Ford Motor Co. purchased The Associates last year.

Freightliner also has a national used-truck locator program to help fleets and dealers locate specific used Freightliner and Mercedes-Benz trucks as well as other brands of used trucks.

Borg-Warner divides, conquers for SAE exhibit

A "Great Divide Expedition" vehicle, part of the first 4-wheel-drive team to complete a continuous North-South border-to-border crossing of the Continental Divide, will be displayed at the Borg-Warner Automotive exhibit during the SAE convention in Detroit Feb. 26 to March 1. Range Rover provided the vehicle for the event.

Oshkosh Truck wins Army contract

OSHKOSH, Wis. — Oshkosh Truck Corp. was awarded first-year funding of $22.2 million for a U.S. Army multi-year contract for heavy equipment transport trucks.

The 4-year contract calls for 1,044 Oshkosh trucks and spare parts worth $213.9 million.

The contract also contains an option for the government to purchase up to 522 additional vehicles from the company.

The vehicles are designed primarily to pull trailers carrying the Army's main battle tank. Full production of the trucks is scheduled

Sales hit peak; Chrysler minivan rebate helps

By Joseph Bohn
AUTOMOTIVE NEWS STAFF REPORTER

Light-truck sales set a record for January, aided largely by a first-time rebate on Chrysler minivans.

It was a big month for U.S.-based manufacturers, which increased their share of the market by several percentage points. U.S.-based firms captured 89.49 percent of the light-truck market, up from 86.03 percent last year.

Conversely, foreign-based manufacturers' share dropped to 10.51 percent from 13.97 percent in 1989.

The industry retailed 386,908 light trucks last month, topping January 1989's previous high by 12.33 percent.

Chrysler's first-ever minivan rebate was a major force behind the big increase, although Chevrolet also set a January record for truck sales.

Chrysler had its best-ever month for minivan sales, with 63,733. That topped the previous high of 44,504 in June 1988.

Dodge chalked up its best January, with 56,394 truck sales. The former January high was 41,899 in 1989.

Dodge dealers didn't get much help from the minivan rebate in selling other trucks. Caravan more than doubled its year-earlier performance, and the full-sized pickups were up slightly, but sales of other Dodge trucks declined in January.

Chevrolet retailed a record 100,278 trucks, up from the previous high of 99,103 in January 1985.

Chevrolet tweaked its incentives on the C/K pickups in late December, including some additional models.

But Chevrolet also had gains over the previous year in its full-sized vans, Geo Tracker and S-10 pickup.

The new Lumina APV van provided 3,472 sales in January. The APV is still gearing up in terms of production and availability.

Ford Division truck sales of 110,906 were up from 107,681 a year

Import sales rise in Japan, but still a drop in the ocean

By Mary Ann Maskery
AUTOMOTIVE NEWS STAFF REPORTER

TOKYO — Imports in Japan enjoyed another year of growth in 1989. A sales increase of 35 percent made it the fourth straight year of record gains.

But the total of 180,424 units was still only 4.5 percent of the total market. Sales of American cars, minus Honda, totaled 14,387, or less than 8 percent of that import slice and only 0.36 percent of the total market of 4,011,267.

The prevailing opinion, according to Ben R. Lever III, president of Ford Motor Japan, is that "the government will encourage or allow imports until they reach 10 percent of the market." Lever estimated that will happen in the latter half of the decade.

Within that seemingly tiny frame of opportunity, American makers are setting about the long process of establishing themselves in a market they have ignored for a decade.

The American Big 3's miniscule total was in a 1989 market of more than 4 million passenger cars. But it represented a 58 percent increase over the previous year.

General Motors sold 7,231 units, a 49 percent increase over the year before. James Steinhagen, director for GM's North American Vehicle Sales in Japan, said, "From our perspective, '89 was a good year."

Steinhagen's position in Japan is new. So is his office. The GM office in Tokyo used to concentrate on GM's relations with its affiliates, Suzuki Motor Co. and Isuzu Motors Ltd., but now it is back in the business of selling cars.

The sales target for 1990 is 9,000 units, which would be a record for GM in Japan, Steinhagen said. The last time sales were close to that was in 1979, when GM sold 8,675 cars. But that was before the American cars developed a bad reputation as gas guzzlers with poor quality.

Since then, the Japanese market has moved upscale to larger vehicles, and America has developed smaller models with better fuel efficiency.

Ford Motor Co. sold 2,684 Ford-made cars last year, an increase of 48 percent, and 3,283 Mazda-made Ford Probes, up 64 percent.

Chrysler Motors sold only 922 cars, but that was nearly 5½ times the 173 it sold in 1988. In addition, it sold about 250 Jeep Wranglers in the commercial sector.

All American makes have an image problem. Ten years ago, the issue may have been quality. These days, Lever said, "It's not so much a bad image as no image at all."

Steinhagen said he finds Japanese customers know hardly anything about GM except that it is a big company.

But the situation is improving. GM sells most of its cars through Yanase & Co. where they are displayed between Mercedes-Benz and Volkswagen models. Customers used to walk right through the showroom from VW to Mercedes without pausing. Now, they stop and look and buy GM cars, Steinhagen said.

The American makers are overcoming the product problem, but they still have a problem getting into the expensive distribution system.

Chrysler Japan Sales now has a new but small showroom at a major intersection in Tokyo. The company estimated it cost $1.8 million, much of it to lease the land.

Chrysler now sells through four direct retail shops, mostly in Tokyo, and 43 independent, nonexclusive dealerships throughout Japan. The goal this year is to add four or five dealers in the hope of doubling sales for the Cherokee, which accounted for more than half of Chrysler's 1,200 sales last year.

There has been talk of Chrysler selling through its partner, Mitsubishi Motors Corp., but little has come of it. Masao Maki, manager at Chrysler Japan Sales, said simply, "That is a gray area."

Toyota head falls for Ford Mustang

TOKYO — Toyota Motor Corp. President Shoichiro Toyoda is convinced Americans can do better than just the handful of sales they have been making in Japan.

At that, Toyoda patted a hand over his chest to suggest the palpitating heart of a young man in love. Toyoda was so impressed with the early Ford Mustang that he bought one.

As for the current Mustang, he said that is a good car, too. But he added with a laugh, "You don't get over your first love."

Import shops like Jaguar Japan Ltd. and Jax Renault line Kampachi Dori Avenue, a prestigious address in Tokyo.

Chrysler, supported by Ford and GM, initiated a report for the American Chamber of Commerce in Japan last summer. It called for dual dealerships, or the same opportunity the Japanese enjoyed when they entered the U.S. market.

The paper received wide publicity in Japan and raised questions about Chrysler's relationship with Mitsubishi. Chrysler reportedly turned to Mitsubishi too late to get help. Mitsubishi was already trying to set up a network to sell Mercedes-Benz.

Chrysler then set up shop with an importer, J. Osawa and Co. Ltd. But after the Chamber of Commerce report, Mitsubishi invited Chrysler to approach its dealers. Chrysler did. It went to dealers of other Japanese makers as well, Maki said, but with few concrete results.

The exception is a Toyota dealership in Sendai that sells Chrysler models at a separate location and under a different dealership name.

After the report appeared, there were rumors that GM would sell its cars through Toyota Motor Co. Toyota President Shoichiro Toyoda said "it is conceivable" Toyota dealers would sell other makes, but added that there were no such plans.

GM is not looking for that kind of help from Toyota or anyone else, according to Richard Johnson, executive vice president of GM Overseas Corp. Johnson said GM supported the Chamber of Commerce paper in principle because it had unsuccessfully approached Japanese dealers. But Johnson said, "We can't wait around for that problem to be solved."

Johnson said GM is committed to its long-term partner, Yanase, and to Suzuki, which started selling the Pontiac Grand Am a year ago. He did not rule out any other connection, and he said there is still Saturn.

The Chamber of Commerce paper pointed to the need for newcomers in a market to tie up with larger dealers selling Toyotas and Nissans. A visit to a Suzuki dealership illustrates the problem when the maker is not at the top of the market.

At one outlet in Tokyo, Suzuki has arranged to sell imported GM and Peugeot cars. But it does not have room for both at the same time. When *Automotive News* visited, there were only two Peugeots on the floor. GM cars are shown in alternate weeks.

Ford may be in the best position among the American makers in terms of exclusive dealerships. Ford sells through the Autorama channel, set up with Mazda Motor Corp. to sell Ford-badged cars. There are now 290 outlets, and the target for 1992 is 500.

Ford has been importing the Taurus, Probe and Lincoln Continental and recently introduced the Thunderbird. But Lever is looking beyond last year's 5,967 combined Ford and Ford Probe sales. He acknowledged it will take time to build acceptance, but he said, "We want volume."

So does GM, which has begun homologation in the United States for some products, starting with Cadillac. GM also is making a feasibility study on right-hand drive, Steinhagen said. "We'll go mainstream," he said. "It is the only way to get volume."

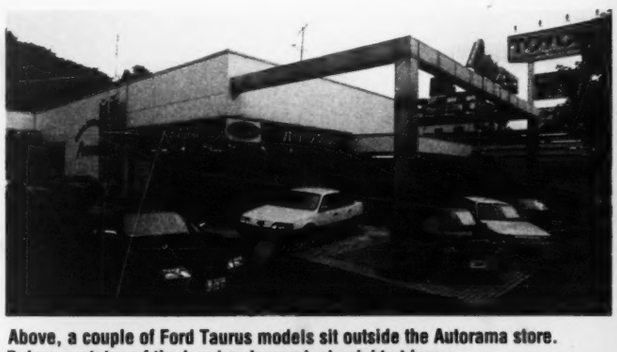
BMW Japan plans 10 new outlets

TOKYO — Japan does not need any barrier against car imports, according to Hans-Peter Sonnenborn, president of BMW Japan.

"Land is a barrier," he said. "The scarcity of land. The price of land. The regulations of land. That will stop our growth."

BMW is second behind Volkswagen in import sales in Japan. But the company has established a prominent image in Japan, with 120 exclusive outlets nationwide. BMW plans another 10 outlets this year and will invest 12 billion yen ($82.7 million) during the next five years.

For a newcomer that has to buy a Tokyo site — 4,500 to 5,500 square feet is a minimum — it can cost $7 million, he said.



Above, a couple of Ford Taurus models sit outside the Autorama store. Below, a statue of the leaping Jaguar looks right at home.

By Charles M. Thomas
AUTOMOTIVE NEWS STAFF REPORTER

DETROIT — New-vehicle sales rebounded in January, boosted in part by incentives and pent-up demand by customers after a dismal December.

Consumers purchased 753,299 cars in January, up 5.04 percent from the same period a year ago; and 386,908 light trucks, up 12.33 percent.

The total of 1,140,207 topped the year-earlier total by 7.40 percent.

Light trucks led the advance for the Big 3, surging 18.45 percent in January from a year earlier. Car sales rose only 2.43 percent.

Chrysler Corp. reported record domestic vehicle sales for January. Deliveries rose 24.66 percent over last year because of a 45.32 increase in truck sales. Car sales were up 2.48 percent.

General Motors reported an increase of 9.34 percent in domestic sales. Cars rose 5.99 percent and trucks climbed 16.26 percent.

At Ford, domestic sales dipped 0.46 percent from last January. Trucks rose 2.99 percent, and cars fell 2.75 percent.

Chrysler's best January ever was the direct result of the rebates on its popular minivans and its guaranteed rebate program.

Minivan rebates ran from Dec. 15 to Jan. 31, offering buyers $1,000 in cash or alternative low-interest financing. It was the first time Chrysler offered rebates on those models.

MARKET SHARES, Domestic Cars

	January Sales	Pct. of Total
Subcompact	87,981	16.16
Compact	147,864	27.15
Intermediate	208,946	38.37
Standard	97,646	17.93
Specialty	2,168	0.40
TOTAL	**544,605**	**100.00**

Now, some Chrysler dealers are saying they need more product to sustain the momentum.

"We had a surprising January," said Tony Cueva, general manager of Fairfax Chrysler-Plymouth in Fairfax, Va.

"The biggest factor was the incentive program, which created awareness," he said. "We sold a lot of Voyagers and Lasers."

Heading into January, Cueva said, the dealership had a three-month supply of vehicles and now has only a 15- to 20-day supply.

"February is shaping up pretty good, too," he said. "We need more merchandise. There is a shortage of Chrysler LeBarons."

Every GM division showed a gain except Oldsmobile, where sales tumbled 20.43 percent in January from a year ago.

GM offered hefty buyer incentives of up to $2,000 on some of its models. Oldsmobile has stopped its customer rebates, except for the Cutlass Supreme. Instead, it has redirected its marketing strategy toward dealer incentives.

GM conceded that the rebates offered by Chrysler increased showroom traffic for GM dealers.

Ford said it had especially strong fleet sales in January 1989, which affected the 1990 vs. 1989 comparison.

"Due to the downtime at a number of our plants in the early part of this January, assembly and shipment of many fleet units was delayed," said Robert L. Rewey, vice president of sales operations, Ford North American Automotive Operations.

"As a consequence, our car sales comparisons for the month understate considerably the degree to which retail demand recovered from the depressed levels of the fourth quarter," he said.

Japanese automakers gained 3.37 percentage points of car market share in January. The Japanese took market share from all their rivals except GM — and 3 points of the increase came from Ford and Chrysler.

Car market share at GM improved to 35.11 percent from 34.30 percent in January 1989.

Chrysler dipped to 9.77 percent from 10.51 percent last year, and Ford's market share sagged to 22.01 percent from 24.17 percent in January 1989.

Nissan's U.S.-built car sales tumbled 32.58 percent in January, and its domestic-import car total was down 8.79 percent from a year earlier.

Honda's U.S.-built sales rose 45.90 percent, and Toyota's went up 112.30 percent. Toyota's Kentucky plant was in a start-up mode a year ago.

Despite the full-month increase, sales in the Jan. 21-31 period dipped from the 1989 total. U.S.-built cars and trucks fell 1.58 percent. Trucks rose 7 percent.

U.S. car-truck trade deficit moves up again in October

WASHINGTON — The U.S. trade deficit for passenger cars and light trucks grew 1.6 percent in October, following a 3.4 percent increase in September. The value of automotive exports and imports fell for the month.

The latest figures from the U.S. Commerce Department place the automotive trade deficit for October at $4.0 billion, compared with $3.93 billion in October 1988.

The annualized U.S. automotive trade deficit of $45.6 billion is 4.8 percent higher than the deficit for the 12-month period ended October 1988.

The number of cars imported during October declined 12.0 percent from a year earlier, to 352,118 units with an estimated value of $3.92 billion. Imports of light trucks increased 9.7 percent for the month, to 79,300 units with an estimated value of $795.3 million.

The number of cars exported in October fell 35.6 percent from 1988 to 42,667 with an estimated value of $568.2 million. The number of light trucks exported in October fell 23.6 percent to 12,295.

U.S. exports of cars to Japan increased by 49 units in October, but the value was down 23.3 percent. The value of car exports to Canada was down 53.8 percent. Light-truck exports to Canada increased in value by 6.6 percent during October but fell 80.6 percent to countries identified as "others."

During the 12-month span, total U.S. automotive exports fell 30.1 percent, from an annualized total of 964,076 vehicles in the period ended October 1988 to 673,914 a year later.

Imports of cars and light trucks also slipped on an annualized basis. The number of vehicles imported for the year ended October 1989 was 5.05 million, down from 5.34 million the previous year.

The number of car imports from Japan was down 11.6 percent for the month; Japanese imports of light trucks fell 31.1 percent in October.

Imports of cars from Canada were up 1.6 percent, and Canada's truck shipments rose 68.0 percent.

Imports of West German cars increased 5.4 percent in October to 21,274.

The number of cars shipped from South Korea fell 36.2 percent in October to 17,671 units.

Swedish cars bound for the United States fell 32.9 percent to 8,242.

Mexico shipped 5,866 cars in October, up 61.2 percent over 1988.

Yugoslavia again failed to export any vehicles to the United States for the month.

Car shipments from the United Kingdom were down 52.7 percent for the month, to 1,533.

Italy continued to increase U.S.-bound car shipments in October, registering a 327.6 percent increase for the month. On an annualized basis, Italian imports were 45.7 percent ahead of the previous year.

France exported only 5 cars to the United States, compared with 849 in October 1988. French imports were 57.9 percent behind the previous year's annualized tally.

Brazil did not export cars to the United States in October.

Countries classed as "others" exported 2,663 cars to the United States in October compared with 1,952 a year earlier.

DEALERS

FROM PAGE 1

No domestic franchises were mentioned among the 13 makes dealers said they were most likely to drop within the next 12 months.

Although the Asian nameplates were ranked higher than the domestic and European vehicles, the differences were much narrower than ever before.

"Products are more equal," Ferron said.

"The difference between the winners and losers will be determined by how enthused the dealers are and how aligned the dealer is with the manufacturer," he added.

Business terms was given a weight of 34 percent in the survey; service support, 33 percent; sales support, 25 percent; and vehicle supply, 8 percent.

Range Rover received the highest rating — 125, eight points ahead of second place Acura, which finished first in 1988.

The Range Rover, which retails for $38,025, has been sold in the United States for three years.

Steve Sumser, general sales manager for Prestige Motors in Paramus, N.J., credits the manufacturer for having an open-door policy with the dealers.

"Not only are they eager to listen, but to participate in funding" for things such as advertising, Sumser said.

Acura, though still strong, experienced its worst defeat in terms of being a good investment.

In 1987, 69 percent of the dealers rated Acura as a good franchise investment; that fell to 32 percent last year.

Both Jim Burns, vice president of Rosenthal Acura in Gaithersburg, Md., and Vincent Radley, owner of Radley Acura in Falls Church, Va., said the big problem is that Acura dealers aren't getting any back-end business — such as service — because the product is so new.

"There are a lot of Acura dealers that built expensive facilities, and they're not getting any big service" business, Burns said.

Acura has been in the market since 1986.

Burns said dealers "may have to make it through some tough times but will be successful if they can hang in there."

Hyundai, rated the No. 1 car in 1987, fell to No. 18 last year with a DSI of 98.

Six percent of the dealers rated Hyundai an excellent investment last year, compared with 83 percent in 1987.

Hyundai sales are down 40 percent at Levis Hyundai Inc. in Baton Rouge, La.

"Almost everybody is thinking of dualing the thing," that is, selling other vehicles in addition to Hyundai in their showrooms, said Pete Tanzini, general manager of Levis. The company "doesn't like it and doesn't want to do it, but they have no choice."

Tanzini said the company is trying to work with the dealers, and he believes there is a future for Hyundai.

"I don't think it will go the way of Yugo," he said.

Brazil exports drop 16 percent

SAO PAULO, Brazil — Brazil's auto exports were down 15.9 percent in January compared with the same month last year. They were 54.9 percent down on December.

Vehicle sales in Brazil were up 9.6 percent on January 1989.

Sales drop for 3 foes of rebates

By Arlena Sawyers
AUTOMOTIVE NEWS STAFF REPORTER

January sales dropped for Oldsmobile, Audi and Volkswagen — three strong opponents of customer incentives.

Some dealers handling those makes report sluggish sales and little increase in floor traffic while others have greatly improved sales. In contrast to the sales declines for the three makes, the overall January market was up 5 percent.

Royal Volkswagen-Audi-Subaru-Nissan in Bloomington, Ind., sold only 4 VWs last month compared to 6 in January 1989. And it sold the same number of Audis in January 1990 as it did a year earlier: none.

Royal General Manager Bruce Clendening said rebates are a necessary evil, especially since other manufacturers offer them.

"Volkswagen is not doing well in comparison to those with rebates," said Clendening. "Last month, we sold 17 Nissans. The dealer body can't afford to wait for people who wait six months for the next rebate."

Oldsmobile sales at Mission Hills Oldsmobile-Mazda in Mission Hills, Calif., are down about 50 percent, mostly because of the lack of customer incentives, said Dan Ballard, general sales manager.

On the other hand, Gary Miller, general manager at Green Bay Volkswagen-Eagle in Waukegan, Ill., said VW's latest program "really does work." Though he doesn't recall how many he sold in January 1989, he said he is sure it was many fewer than the 15 he sold last month.

"The prices are lower, and it does attract the customers," said Miller. "We're selling more Volkswagens than ever. The Jettas and the Foxes — the cars that sell for $9,000 to $11,000 or $12,000 — that's what's selling."

Last fall, VW and Audi discontinued cash-to-customer rebates, reduced 1990 car prices and instituted bonus payment programs for salespersons.

Also, Oldsmobile redirected most of its cash incentives — $500 to $2,500 on 1989 and 1990 models — to dealers. The only rebates to Oldsmobile customers are $1,500 and $1,000 on 1989 and 1990 Cutlass Supreme models, respectively.

In January, Audi sold 1,283 cars, down 29.01 percent from 1,809 last year. VW sold 8,297 last month, down 8.11 percent from 9,029; and Oldsmobile sold 38,880, down 20.43 percent from 48,862.

The sale of "42 or 43" Oldsmobiles made January 1990 "better than any month in recent times" at Martin J. Kelly Oldsmobile in Arlington Heights, Ill., although the dealership "still lost money," said sales manager Bill Kelly. Of the cars he sold in January, 20 to 25 percent were rebate-carrying 4-door Cutlass Supremes.

"The 2-door isn't doing as well as the manufacturer would like, but the 4-door has taken off well at my store," said Kelly.

Kim Hansen Chevrolet-Oldsmobile in Burley, Idaho, had one of its best Januarys ever, said salesman Keith Heiner. He said Oldsmobile's dealer program coupled with a strong local economy pushed 6 Oldsmobiles out the door in January compared to 3 or 4 the year before.

INVENTORY

FROM PAGE 1

President Ron Tonkin's "call to action" to cut inventories "scared" or "influenced" them to order selectively so they would not end up with more cars than they could sell.

"We are short going into February. Our inventory is running at 60 days," said Regis P. McGuire, president of Polkowitz Motors in Perth Amboy, N.J., one of the largest-volume Cadillac and Buick dealers. He plans to build stocks to 75 days going into March.

Minnesota dealer Jim Lupient, who has 23 stores in four locations, said he is holding at his normal 60-day supply for his stores that include Buick, Oldsmobile, Chevrolet, Chrysler, Plymouth, Dodge, Lincoln, Mercury, Nissan, Volvo and Hyundai franchises. December and January sales were good because of warmer weather, he said.

"Inventories are running at 60 days," said Peter Griffin, owner of Ford, Buick and Lexus stores in Greenwhich, Conn. "A year ago, we were at 90 days. We're a moderate-sized dealer. Our floorplan for 1989 was up $100,000 over the prior year. We're not going to do that again. We want to get it down below 60 — to 45 days."

On Feb. 1, combined stocks of imported and U.S.-built cars totaled 2,114,430, 12.13 percent below last year.

U.S. carmakers began the month with the lowest domestic-car inventory for any February in seven years. They had 205,493 fewer cars than on Jan. 1. Stocks totaled 1,463,881, equal to a 70-day supply. A month earlier, the stockpile was 92 days.

During January, import-car stocks were shaved to 650,549, an 81-day supply. On Jan. 1, import carmakers had an 86-day supply.

Six of the eight companies that build cars in the United States reported lower inventories and days' supplies of U.S.-built and imported cars on Feb. 1.

Including captive imports, the Big 3 whittled combined car supplies to an average 76 days. General Motors had a 75-day supply, Chrysler's was 79, and Ford Motor Co. had a 73-day supply of cars. On Jan. 1, GM and Chrysler reported supplies above 100 days.

Among the transplants, Nissan still had a swollen 4-month supply of U.S.-built and imported cars on Feb. 1. It started the month with a 121-day supply compared to 148 days on Jan. 1.

Mitsubishi reduced its 100-plus days supply to 86 on Feb. 1. It scaled back production at its Diamond-Star joint venture plant last month. It also had record January sales.

Mazda reduced its days' supply and car stocks. It began February with a 64-day supply. In January, Mazda trimmed production at its Flat Rock, Mich., plant.

Honda and Toyota had higher days' supplies on Feb. 1 than a month earlier. Honda began the month with a 43-day supply and Toyota had 45 days.

MEMA: Suppliers need import biz

ENGLEWOOD CLIFFS, N.J. — Capturing a larger share of the import service market is the greatest challenge facing U.S. aftermarket suppliers in the 1990s, according to William Raftery, president of the Motor and Equipment Manufacturers Association.

Speaking at a meeting of the group's Automotive Electronic Data Processor Council, Raftery noted that 37 million foreign-built vehicles are projected to be operating in the United States by 1991, and nearly 60 percent of them will be more than four years old. By 1990, he added, import vehicle replacement parts are expected to be almost 25 percent of total aftermarket sales.

The good news for U.S. aftermarket suppliers, according to Raftery, is that less than 30 percent of foreign vehicle service is performed by new-car dealers. The bad news, he said, is that those private stations, garages and repair specialists performing the volume of foreign-vehicle repair work are purchasing more and more non-U.S.-manufactured and distributed parts.

"U.S. aftermarket suppliers must reverse this trend to experience growth in the years ahead," Raftery said. "Unfortunately, a similar situation exists among jobbers."

Sixty-six percent of the parts stocked by jobbers for foreign applications are U.S.-manufactured and distributed, he said. For jobbers doing at least one-half of total sales in foreign parts, the amount of U.S.-manufactured parts drops to 48 percent.

Escort, Tracer play it both ways

Buyers of subcompacts get cash rebates and cut-rate loans

By Arlena Sawyers
AUTOMOTIVE NEWS STAFF REPORTER

DETROIT — Ford Motor Co. announced a new incentive program that gives purchasers of Ford Escort and Mercury Tracer a cash rebate plus cut-rate financing.

Buyers of 1989 and 1990 Escorts will receive $750 and 6.9 percent financing on contracts up to 48 months, and buyers of 1989 and 1989½ Tracers will receive $1,000 plus 6.9 percent financing on contracts up to 48 months. In lieu of those programs, buyers may choose $1,500 on Tracer or $1,000 on Escort. The programs expire April 2.

On other Ford and Mercury models, customers can choose cash or a cut-rate loan.

Ford Division also announced the following customer incentives on 1989 and 1990 cars: Festiva, Probe, Mustang and Thunderbird, $1,000; and Tempo, Taurus and Crown Victoria, $750.

Mercury customer rebates on other 1989 and 1990 models are: Cougar, $1,000; and Topaz, Sable and Grand Marquis, $750.

Ford truck customer rebates are: Bronco, $1,500; Bronco II and Ranger, $1,000; F-series and Econoline/Club E150 with van conversion package, $750; and Aerostar, $500.

All Ford Motor incentives expire April 2. The rebates of $1,500 on the 1990 Continental and Mark VII have been extended until that date.

GMC and Chevrolet instituted new truck incentives.

Incentives on 1989 and 1990 GMC Trucks are: V-Jimmy and RV Suburban, $1,500; S-15 pickup and S/T Jimmy, $1,000; G-van (excluding 03 and 32 models), RV pickup, cab chassis, Sierra and Safari (except all-wheel-drive and extended models), $750.

Chevrolet's rebates on 1989 and 1990 trucks are: full-sized Blazer and Suburban, $1,500; S-10 pickup and S-10 Blazer, $1,000; Astro, C/K 1500-3500 full-sized pickup and cab chassis (except 454SS) and R/V full-sized pickup and cab chassis, $750.

In lieu of cash, GM truck buyers may choose finance rates of 6.9 percent for contracts up to 48 months and 10.9 percent for 60-month contracts.

The incentive on the R/V full-sized pickups and cab chassis expires Sept. 26. Other Chevrolet and GMC programs end May 2.

Mazda Motors of America has extended its rebate of $1,000 on 1990 626 and MX-6 models until April 3.

3-shift plant eyed by Rover

By Daniel Ward
STAFF CORRESPONDENT

LONDON — Rover Group is planning to follow the example of General Motors Europe by adopting 3-shift working at its Longbridge, Birmingham, plant.

For the past two years, GM's Zaragoza, Spain, plant has been the only European car assembly plant producing vehicles on three shifts to overcome a capacity shortage for Opel Corsas and Vauxhall Novas.

The launch last autumn of the new Rover 200 and its Honda Concerto sister model, both produced on the same line at Longbridge, has created a surge of demand. The demand is likely to increase as Rover prepares to launch the 400 sedan version of the compact model and to add a sporting 3-door to the range in the next few months.

By contrast, the Cowley plant which manufactures the Rover 800 and Sterling is working at less than two-thirds output. Output was even halted for several days in January.

Three-shift working for the 2,500 workers at Longbridge would increase production from 4,600 cars a week to over 5,000. It is unclear how many extra jobs would be created by the move, which is now under discussion with the unions.

The union stance is that it will consider the change to three shifts, but only if the company reduces the work week from 37.5 hours to 35 hours. This would be in line with the campaign to cut the work week to 35 hours across the whole British engineering industry.

Rover is negotiating to introduce a system of 11- to 11½-hour shifts to replace the existing 8½-hour shifts in the Longbridge engine plant. Under the new system, the engine and gearbox plants would work seven days a week and stop only on Saturday evenings. The machinery would be operating 149 hours a week instead of the current 85 hours.

Workers would receive a 7-day break every four weeks, and would not be required to work more than three consecutive night shifts. They would work 13 extended shifts over a 4-week period. Employees would receive a $36 a week bonus for accepting the scheme.

PRODUCTION

Truck output dives 35% in January

By Karen Detkowski
SPECIAL CORRESPONDENT

Plant closings early in the month caused U.S. truck production in January to fall 136,374 units below last year's highest-ever total.

Truckmakers built 244,898 units last month, 9.75 percent below the prior month and 35.77 percent below the year-ago month.

Scheduled truck production last week totaled 70,690 units, 1.64 percent below the previous week and 25.61 percent below the year-ago week.

Car output for January totaled 356,713, 17.17 percent below December and 44.10 percent below January 1989.

Last week's scheduled production of 110,970 cars increased 3.27 percent from the previous week but was 27.11 percent below the 1989 week.

Companies split last week's estimated production as follows: General Motors, 51.52 percent; Ford Motor Co., 20.49 percent; Honda of America Manufacturing Inc., 7.98 percent; Toyota Motor Manufacturing U.S.A. Inc., 3.97 percent; New United Motor Manufacturing Inc., 3.69 percent; Chrysler Motors, 3.63 percent; Mazda Motor Manufacturing (USA) Corp., 3.59 percent; Diamond-Star Motors, 2.49 percent; Nissan Motor Manufacturing Corp. U.S.A., 2.14 percent; and Subaru-Isuzu Automotive Inc., 0.50 percent.

GM expects to resume output today at its Arlington, Texas, and Lakewood, Ga., assembly plants. Both plants were closed to reduce inventories.

GM's Lansing, Mich., Grand Am assembly line will be closed this week to keep inventory in line with slow sales.

Chrysler Motors had only one car plant operating last week, the Sterling Heights, Mich., plant, which assembles the Plymouth Sundance and Dodge Shadow.

Chrysler's Belvidere, Ill.; Newark, Del.; and St. Louis No 1 plant all were idle last week to adjust inventories.

The plants are scheduled to resume production today.

As previously announced, Chrysler's St. Louis No. 1 plant will operate on a single shift effective today. The plant is scheduled to close permanently in September.

Chrysler's Toledo, Ohio, Jeep plant was idle last week. The plant is scheduled to return today.

Canadian cars lowest since '65

January auto production in Canada totaled 58,254 units, the lowest for that month since 1965 when 56,087 cars were assembled.

The January build was 28.52 percent below December's 81,497 and 27.30 percent below output in January 1989.

Canadian makers built 62,994 trucks in January, the lowest tally for that month since 1981's 57,798.

Truck assembly in January was up 0.69 percent over December but fell 27.05 percent from the year-ago month.

Chrysler ads tout advantage vs. Japanese

By Raymond Serafin
and Patricia Strnad
CRAIN NEWS SERVICE

Lee Iacocca is rolling up his sleeves to take on the Japanese again.

Sources said Highland Park, Mich.-based Chrysler Corp.'s new corporate ad campaign, expected to debut in about a month, will feature pointed comparisons with Japanese products. Iacocca will appear at least in initial commercials. The campaign theme line, "Advantage Chrysler," is likely to find its way into divisional and dealer group advertising.

The new campaign was developed by corporate agency Bozell of Birmingham, Mich. But the overall idea grew out of the personal conviction of Iacocca — and other top Chrysler officials — that many American buyers routinely assume Japanese products are superior despite big improvements in the quality of U.S. products.

"We do have advantages. Big Chrysler advantages. You're going to be hearing a lot more of that in coming months," said Iacocca during a Feb. 13 press conference at which he also announced a fourth-quarter net loss of $664 million, much of that attributable to a $577 million one-time charge for restructuring operations.

Iacocca is expected to hit hard on the theme of Chrysler advantages vs. the Japanese during a 6-city schedule of meetings with press, business and community leaders beginning Wednesday, Feb. 21, in Washington.

The tour already has been criticized by the American International Automobile Dealers Association, which represents import dealers. Robert M. McElwaine, retired AIADA president, wrote in the February AIADA newsletter that he is suspicious of Iacocca's motives.

"Undoubtedly, coterie of congressmen and an assemblage of senators will be coaxed into attending Iacocca's dog-and-pony show and to hear more of Dr. Iacocca's economic doctrine, which is based on tilting the field against imports and transplants," McElwaine said.

Iacocca warmed up for the tour and the upcoming ad campaign in both his Highland Park press conference and in a Feb. 10 speech to the National Automobile Dealers Association in Las Vegas. "Too many Americans want to believe that 'made overseas' always means better than 'made in America,'" Iacocca said in the speech. "At Chrysler, we're not going to let that kind of crap go unchallenged any more."

The new approach comes in reaction to big gains in the U.S. market by Japanese-based auto companies, which together picked up 1.5 points of new vehicle market share in 1989, taking 21.9 percent. Chrysler's 1989 share of the new car and light-truck market dropped half a point, to 13.8 per-

GM NO. 1

Big 3 picture brightens after '89 profit plunge

By Charles M. Thomas
AUTOMOTIVE NEWS STAFF REPORTER

The worst of the financial downturn may be over for the Big 3, whose profits tumbled for the fourth quarter and all of 1989.

Car sales are improving and inventories are falling, which signals higher production as dealers replenish their stocks.

Charges taken by Ford Motor Co. for the sale of Rouge Steel and Chrysler Corp. for some of the costs associated with the layoff of white-collar workers are now behind them.

Chrysler, Ford, GM details, Page 85

Profits declined sharply for the domestic automakers in the fourth quarter and the year. The declines resulted from lower sales and the high cost of customer rebates in the first year in which Japanese transplant production topped a million.

Japanese cars — U.S.-built and imported — picked up 3 percentage points of market share, to 26 percent.

Each of the Big 3 complained of high incentive costs. Ford said rebates were $800 per car in the fourth quarter, up from $350 a year earlier.

And all three said lower volume hurt earnings.

For the first time in three years, GM posted higher profits than Ford.

Overseas operations helped buoy profits at Ford and GM. But profits for Ford's Financial Services Group and General Motors Acceptance Corp. dipped due to higher borrowing costs.

At Chrysler, net profit for 1989 was $359 million, down from $1.05 billion in 1988.

And red ink flowed in the fourth quarter. Chrysler lost $664 million, largely due to a $577 million charge for shutting two assembly plants, discontinuing two car lines, and costs associated with cutting the white-collar work force.

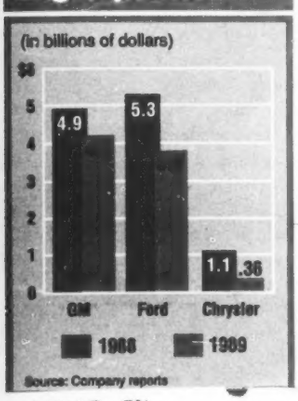
Even without the one-time charge, Chrysler would have lost $87 million in the fourth quarter because of incentives and lower car sales. Chrysler said per-vehicle incentive costs were $1,200 in the fourth quarter.

GM's profits dipped 49.9 percent to $700.2 million in the fourth quarter and fell 13 percent to $4.2 billion for the year.

Ford's profits sagged 73 percent to $314 million in the fourth quarter from $1.1 billion a year earlier. That was largely due to a write-down of $424.3 million for the sale of Rouge Steel.

For the year, Ford net income to $3.8 billion.

Big 3 profits



Candy Farricielli: "They are threatening us." AUTOMOTIVE NEWS/JOE WILSSENS

Some dealers storm out of Olds make meeting

By Arlena Sawyers
AUTOMOTIVE NEWS STAFF REPORTER

LAS VEGAS — Several dealers stormed out in the middle of the Oldsmobile make meeting after a heated verbal exchange with Oldsmobile General Manager J. Michael Losh.

Dealers said the adversarial tone of the meeting came to a climax over a factory-to-dealer incentive program that was so convoluted that dealers did't understand it.

Losh angered some dealers with his responses at the meeting, held in conjunction with the annual convention of the National Automobile Dealers Association.

The heated tone may have been fueled by Oldsmobile's poor sales in the last several months. Oldsmobile sold 600,037 vehicles in 1989 — 16.11 percent fewer than the 715,270 it sold in 1988. Its market share dropped from 6.75 percent in 1988 to 6.08 percent.

A few days after the meeting, Oldsmobile reduced the price on its 1990 Cutlass Ciera. Effective Feb. 16, the Cutlass Ciera S coupe was reduced by $200 to $12,195 and the Cutlass Ciera S sedan was reduced by $500 to $12,495.

Also, under a central regional program that expires April 3,

NADA

No easy answers for weary dealers

By Lindsay Chappell
AUTOMOTIVE NEWS STAFF REPORTER

LAS VEGAS — Last week's National Automobile Dealers Association convention here went into the books as the biggest, best-attended and most money-making convention in NADA's history.

But everywhere — in the convention hall, in the dealer make meetings and even at the carmakers' expensive soirees — the mood among the estimated 22,000 attendees was clearly down.

Sales are improving but are still slow; the dealer issues that 1989 NADA President Ron Tonkin assaulted for a year remained unresolved, and there was no reason to expect matters to change quickly.

Dealers said that many of their fellow retailers had failed to show despite strong early registrations by dealers and their spouses and managers. Exhibitors said exhibition floor traffic was thin at various times — especially after former President Reagan canceled his scheduled Tuesday afternoon speech.

And while workshops and seminars were packed, at least 21 exhibitors pulled out of the show. Exhibit cancellation fees totaled $58,000 this year, according to NADA figures, compared to none last year and $7,900 in 1988.

If last year's convention revealed that dealers were mad as hell at the factories and weren't going to take it anymore, this year's message was that there are no easy answers to problems facing the industry.

Dealer-factory animosity was still evident, particularly at the Oldsmobile make meeting, where several dealers stomped out in response to comments by General

Continued incentives, fleets drive sales up again

By Joseph Bohn
AUTOMOTIVE NEWS STAFF REPORTER

Domestic car and truck sales spurted higher during Feb. 1-10, aided by fleet orders and strong consumer incentives.

Car sales were up 9.47 percent during early February and truck sales were up 4.83 percent.

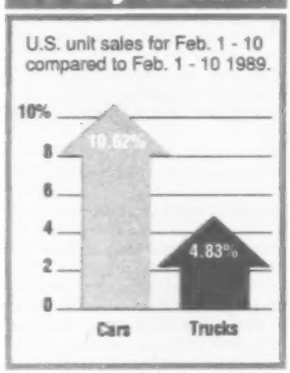
Auto manufacturers' decisions to sweeten their incentives in late December and roll them into January and February appear to be giving the industry a kick in the pants.

Traffic at dealerships has been improving, along with the moods of some dealers. Inventories have been coming down, and one Big 3 analyst said that, with the possibility of sustaining a stronger sales pace, further plant downtime may be eliminated.

Domestic manufacturers retailed 270,356 new vehicles during Feb. 1-10, up from 249,246 a year ago.

There were nine selling days in both periods.

10-day sales



AUTOMOTIVE NEWS / CHRISTINE BADER

Stronger sales of domestically built Ford Motor Co., General Motors, Mazda, Mitsubishi, Nissan and Toyota cars helped boost the auto sales total to 173,453 from 156,806 a year ago.

Truck sales, although up, suffered from the end of Chrysler Motors' minivan rebates in January, and the inevitable payback in lower February sales.

Chrysler's guaranteed rebate program also doesn't appear to be doing much for its sales.

Chrysler Motors' truck sales were off 16.54 percent during early February. Its car sales slid 8.45 percent.

Ford Motor and GM both enjoyed sales increases partly related to incentives and partly to fleet deliveries. Both companies had plants down for a good part of January which are now back in operation.

Ford Motor car sales were up 15.86 percent in early February, and its truck sales were up 10.85 percent.

GM car sales were up 6.71 per-

Peugeot itself takes sales job for Canada

By Steve Mertl
SPECIAL CORRESPONDENT

VANCOUVER, British Columbia — Peugeot's Canadian operations have changed hands for the third time in 10 years, underscoring the French automaker's continuing problem establishing a market base in the country.

Autolion Distribution Inc. of Toronto terminated its contract with Automobiles Peugeot at the end of January after poor 1989 sales, said Autolion President Dick Hammer.

He said an attempt to negotiate better terms with Peugeot failed.

Automobiles Peugeot is setting up an affiliate of its own in Canada to distribute cars, said a spokeswoman for Peugeot Motors of America. The new Canadian affiliate, which has not been yet named, will rely for logistic and technical support on Peugeot Motors of America, based in Lyndhurst, N.J.

Hammer, whose Dick Hammer Group owns several auto dealerships in Ontario and Quebec, said the 20 existing Peugeot dealerships sold only 223 cars last year. Autolion had forecast 1,200 sales.

"We lost too much money," said Hammer. "The car did not sell as projected."

No single factor scuttled Autolion, said Hammer. Peugeot's public image remained peripheral after two earlier forays into the market, first with a private importer, then in a five-year deal with Chrysler that ended in 1988, and finally Autolion.

"The public just didn't have confidence in either Peugeot or us," said Hammer, who plans to keep his two Peugeot stores.

Autolion imported only the less expensive 405 model line at prices of $24,000 to $33,000 Canadian ($20,170 to $27,730).

Peugeot's U.S. profile is also microscopic. The company sold only 6,054 cars in the United States last year, about half of them 405-S — which was supposed to be the breakthrough car for the North American market.

Automotive News Staff Reporter Jim Henry in New York contributed to this report.

VW, Audi set up incentive program for shop workers

By Dutch Mandel
AUTOMOTIVE NEWS STAFF REPORTER

TROY, Mich. — Volkswagen and Audi are offering rewards to dealership employees who deal with customers.

The "Star Performance" program is designed to increase customer satisfaction and help dealers keep good backshop employees.

It is believed to be the first program to offer incentives to workers other than salespersons.

"We want the dealership's workers to share in the success of the brand by contributing to the success of the brand," said Joseph Bennett, spokesman for Audi of America Inc.

The year-long program began Jan. 1; dealers were of it in early February.

Early response to the program is positive. "I think it's a fantastic incentive program," said Ken Snell, service manager of Tracy VW-Porsche-Audi in Hyannis, Mass. "It's nice to be recognized for doing a good job working on cars that have become more and more complicated. It's a good incentive for good quality of service throughout."

Audi and Volkswagen United States Inc. will award quarterly prizes, such as credits redeemable for merchandise or individual travel awards, to top-performing front-line service people. Only those who are employed for the entire year — and who have completed VW and Audi certification tests — are eligible.

Since VW and Audi dealers do not have to spend money to participate in the program, close to 100 percent participation is anticipated. The cost is expected to be less than $3 million.

Employes will be evaluated through the companies' Consumer Satisfaction Tracking System surveys sent to new VW-Audi owners.

Evaluation areas include service satisfaction, business management, training recognition and bonus activity. All authorized VW and Audi dealers are eligible to enroll in the program.

VW and Audi will categorize dealerships based on size. VW-Audi dual dealerships in the same facility can compete in both programs.

Though service managers can be rewarded with expense-paid trips, they cannot qualify for service department employee awards.

To be eligible, service employees must work at least half their time on VW or Audi for the entire program year.

The service adviser and cashier will be judged on responses to the question: "Overall, how responsive was the service staff to your service needs?" The technician, shop foreman and dispatcher will be judged on responses to the question: "Were the repairs that you requested fixed right the first time?"

Under the service satisfaction category, additional points are given for overall customer service satisfaction, follow-up and vehicle pre-delivery inspection.

Business management personnel are evaluated on the completeness and accuracy of the monthly time summary submissions.

Technical training points are based on the percentage of master and registered technicians at a dealership.

Additionally, dealerships can earn points based on use of co-op advertising money, participation in promotional activities and participation in direct-mail programs.

The top service advisers can earn use of a new car for 12 months.

Other prizes range from $400 in award credits for cashiers to $1,000 in award credits for foremen/technicians and dispatchers. All credits are redeemable for merchandise or travel awards.

Chrysler may use a V-8 or V-10 in the Viper.

VIPER

Chrysler plans limited-production run to assess feasibility

By Mary Connelly
AUTOMOTIVE NEWS STAFF REPORTER

LAS VEGAS — Chrysler Motors will produce a limited number of Dodge Viper sports cars to assess production feasibility, according to Ken Meade, chairman of the National Dodge Dealer Council.

Meade said the high-visibility sports car project has not received final approval for a complete production run. But Chrysler will produce no more than 100 Vipers to determine costs, production sourcing and other factors, Meade said.

Tom Pappert, Chrysler Motors vice president of sales, declined comment on Meade's remarks.

Chrysler Corp. Chairman Lee Iacocca last week said the company would decide Viper's fate in the second quarter of 1990. Iacocca said if the project is approved 5,000 to 7,000 Viper units would be built annually.

"I would hope to be able to announce we can do it because it's a good car," Iacocca said.

Chrysler introduced the 2-passenger, V-10-powered Viper to the auto show circuit in January 1989 amid enthusiastic approval from the motoring press. Since then, the company has been assessing how much it would cost to produce the car and what effect an increase in government-mandated corporate average fuel economy standards might have on the project.

"If we can pull Viper off, it would give the corporation a boost," Meade said. "An image car is important to any corporation, like Corvette is to Chevrolet."

Meade said no time frame for the limited-production run has been determined. Nor has the company decided what engine will power the Viper.

Correction

Jim Cass is general manager of Al Piemonte Ford in Melrose Park, Ill. His dealership affiliation was listed incorrectly in the City by City roundup in the Feb. 12 issue.

Big Ford, Mercury

MICHAEL POHL

Ford Motor's full-sized cars will adopt flowing, aerodynamic lines for the 1992 model year. Among the styling differences between the two cars is the more formal roofline on the Mercury Grand Marquis, above. The Ford Crown Victoria roof, right, has a bit of Jaguar flavor. Both cars will be equipped with Ford's new 4.6-liter modular V-8 engine.

INFINITI *Rocks and trees are nice, but new ads will focus on the car and its features*

By David Versical
NATIONAL EDITOR

LAS VEGAS — After a 3-month launch that yielded some surprises about the luxury car business, Infiniti has begun the second phase of its controversial advertising campaign.

The ads were aired in local television markets last week. And this time, they actually show automobiles.

Earlier ads became a national conversation piece by focusing on rocks, trees and surf instead of sheet metal. They have also been the butt of jokes. Comedian Jay Leno, for example, bragged recently to his "Tonight Show" audience that he'd finally seen the new Infiniti — on the side of a milk carton.

For dealer Kjell Qvale, the change was long overdue.

"How anyone would say they'd stay with rocks and trees must have rocks in their head," Qvale said when told that some dealers wanted the campaign to stay.

"We loved the rocks and the trees up to a point, and then we lost them," said Qvale, who owns Van Ness Infiniti in San Francisco. He had high praise for the product but said sales have been slower than expected.

Thomas Mignanelli, executive vice president of operations at Nissan Motor Corp. in U.S.A., insists Infiniti has not been hurt by the jokes. Attention is what counts when you are establishing a name, he maintains, and Nissan's new luxury division has scored very well in awareness surveys.

> "The car is not selling like hot cakes — but we never expected it to."
>
> **Thomas Mignanelli**
> Nissan

But he concedes the campaign has caused some unforeseen problems. Shoppers who would never buy a $23,500 coupe or $38,000 sedan have visited showrooms thinking Infiniti might be for them.

"They came in not knowing what the car would be, not knowing how big it was, not knowing how powerful it was, not knowing what price it was," Mignanelli said. Others had what Mignanelli called "wild expectations."

The result was that the advertising attracted more people than some dealers had time to handle. "One dealer had 600 people visit in a week," Mignanelli said. "If 100 or 200 don't know what the car is, that's a problem."

The second phase of the campaign will do more to tell what the car is. The ads are being shown initially in the 55 television markets where Infiniti now has dealers. Print ads have run nationally.

One TV ad blends views of the Q45 sedan, nature scenes and a list of performance numbers. There are 12 ads in all, each addressing a different virtue. The commercials conclude with the name of the local dealer. Infiniti will begin running the TV spots nationally in coming weeks and will show an 800 phone number instead of the dealer's name.

The campaign will move into another phase in early spring. That, too, will focus on the product, said Infiniti General Manager William R. Bruce. But it will also try to create more brand awareness if it is needed.

Infiniti will add a convertible version of the M30 by late summer. A new sedan, known as G20 and priced below the $23,000 M30 coupe, will follow shortly after.

Mignanelli insists he is not disappointed in the early sales results. Infiniti dealers sold 1,723 cars between the Nov. 8 launch and the end of 1989 and 1,071 last month.

"The car is not selling like hot cakes — but we never expected it to," he said.

Nissan also did not expect the M30 to command 40 percent of sales — and it has. A 70-30 split in favor of the Q45 had been projected originally. Another surprise has been the number of M30 buyers who are women — 42 percent. And the average household income of buyers has been higher than expected — about $150,000 for Q45 and $80,000 for M30.

Infiniti expects to have 70 dealers by the end of March and 85 by the end of the year. The division expects to add about 20 dealerships annually in the next three years.

Finally, the car and its features.

VW AG nears deal on China-built cars

By Richard Johnson
AUTOMOTIVE NEWS STAFF REPORTER

FRANKFURT, West Germany — Volkswagen AG has completed a feasibility study on a joint auto production venture in Changchun, China. It hopes to sign an agreement with Chinese government officials by late summer.

Plans call for construction of a factory that would build 150,000 VW models annually beginning in 1996. The vehicles would be for Chinese and export markets.

VW's partner in the venture is First Automobile Works, which currently assembles Audi 100 kits under a separate deal.

The feasibility study, which was launched in 1988, resulted in a positive recommendation, according to a VW spokesman. He said the report is now in the hands of Chinese auto industry officials in Beijing, who must give final approval.

"Hopefully, we will get approval later this year," the spokesman said. "The optimists think a contract could be signed in August or September."

The size of the investment that would be undertaken has not been released. Neither has VW said which vehicle would be produced, but it is expected to be a version of the Golf subcompact. The current Golf will have been replaced by that time.

VW signed a series of agreements with First Automobile Works in 1988 covering licensing of the Audi 100 and delivery of tools, supplies and parts for local assembly.

Shipment of Audi 100 kits ground to a halt last year pending Chinese approval of hard currency payments. The VW official last week said Audi assembly is now proceeding and "rising steadily."

About 4,500 Audis have been assembled in China to date. Depending on availability of hard currency, another 4,000 to 5,000 are expected to be produced in 1990. Audi assembly is expected to rise to 30,000 annually by 1992.

VW's separate Shanghai Volkswagen Auto Co. Ltd. venture in the city of Shanghai produces the Santana, a notchback version of the previous-generation Passat (Quantum). Santana production last year totaled 17,000, and output of about 20,000 is expected this year.

The VW spokesman said Shanghai VW has just completed its first phase investment of 500 million marks ($298 million) with the completion of new engine, stamping and paint facilities in the city of Anting near Shanghai.

He said the new plants are all operational and scheduled to be dedicated in April. Addition of the facilities will raise Shanghai VW capacity to 30,000 units by the end of 1991.

Toyota 4Runner fares poorly in NHTSA's 35-mph crashes

By Diana T. Kurylko
AUTOMOTIVE NEWS STAFF REPORTER

WASHINGTON — Drivers of 4-door Toyota 4Runners are likely to suffer head injuries in head-on accidents at 35 mph, the National Highway Traffic Safety Administration said.

It's also possible that front-seat passengers could be injured, said NHTSA in its latest report on 35-mph crashes. But they face less of a risk than drivers.

Toyota's 4-wheel-drive 4Runner was one of four 1990 vehicles evaluated in the latest round of NHTSA's new-car assessment program. The agency will test 36 vehicles this model year by crashing them into a fixed barrier at 35 mph.

The three passenger cars in the most recent test — the Nazda Miata, Lexus ES250 and Nissan Stanza — all had scores that indicated head injuries to drivers are possible and head injuries to passengers are unlikely. The Miata and the Lexus were equipped with driver-side air bags.

In the test, NHTSA records the potential for head and chest injuries. The lower the score, the less likely an injury. Head injury scores below 750 indicate injury is unlikely; scores of 750 to 1,250 indicate injury is possible; and scores above 1,250 indicate injury is likely.

The 4Runner had a head injury score of 1,306 for the driver and 1,133 for the passenger.

The Miata had a higher driver-side score than two "lightweight" 1990 cars tested previously, the Acura Integra sedan and the Mitsubishi Eclipse coupe. The Miata scored 920. But the car's passenger-side score of 531 was lower than the Integra's and Eclipse's.

35 MPH CRASH TEST
Scores for 1990 new car assessment program

	Protection device	Injury index: Driver	Injury index: Passenger
Mazda Miata	Air bag	920	531
Nissan Stanza	Motorized belts	1,105	629
Lexus ES250	Air bag	992	630
Toyota 4Runner	Belts	1,306	1,133

Potential for head injury is unlikely for scores below 750, possible for scores between 750 and 1,250, and likely for higher scores. SOURCE: NHTSA

Passport to sell Saturns in Canada

TORONTO — General Motors of Canada will sell Saturn cars through its Passport International Automobiles import division. Sales begin in spring 1992, about 18 months after the U.S. debut.

Passport will add a 4-door sport-utility called Rodeo this fall. The Isuzu-based vehicle will be built at Subaru-Isuzu Automotive Inc. in Lafayette, Ind.

Last week, Passport introduced a 2-door version of the Isuzu Impulse. A 4-door model will arrive this fall.

— Alex Law

Heavy-truck sales take January plunge

By Joseph Bohn
AUTOMOTIVE NEWS STAFF REPORTER

DETROIT — January's heavy-truck sales held few surprises.

Class 8 started 1990 with sales of 9,753 vehicles, a decline of 11.91 percent from last year.

Most industry officials are looking for a dip of 10 to 15 percent in Class 8 sales for the year from the 145,068 trucks sold in calendar 1989.

January is normally a weak month because a lot of truckers like to take delivery of their vehicles in December for tax purposes.

An official with one of the major manufacturers noted, though, that bidding activity is up from the fourth quarter of 1989 as many company managers seek to buy trucks before their budgets are cut.

That could portend slightly stronger-than-anticipated sales in the next few months though, overall, companies are not buying in the volume they did in the early part of last year.

With most officials looking for an upturn in the second half of calendar 1990, factory sales of Class 8s could be stronger than retail sales. Last year, just the opposite was true.

But with field inventories down sharply at year's end, any upturn would force dealers to order heavily from factories to replenish their stock, Frank Prezelski, an analyst with Deutsche Bank of New York, pointed out.

Overall, light, medium and heavy trucks posted a record 409,386 sales in January, up from last year's 367,691, the previous record.

Record light-truck sales of 387,543, up from 342,323 last year, led the industry's surge.

All medium-duty segments were down, including Class 4.

Among Class 8's major players, Mack Trucks Inc. continues to exhibit the greatest weakness. It dropped 23.42 percent in January on sales of 925 heavy trucks.

Most of the other major players also were down sharply from last year's extremely strong January.

Two exceptions were Ford Truck Operations, which posted a 6.72 percent increase on sales of 1,112 Class 8s, and Freightliner Corp., which was up 8.35 percent on sales of 2,102 units.

International "Lo-Profile," right, next to a conventional model

Navistar's Lo-Profile debuts

By Joseph Bohn
AUTOMOTIVE NEWS STAFF REPORTER

Navistar International has introduced a new 4700LP Lo-Profile medium-duty straight truck for specialized segments of the Class 4-6 markets.

The company also said that 73 of its International truck dealers in North America qualified for membership in the Circle of Excellence in 1989, the 10th anniversary of that dealer recognition program.

The 4700LP features Lo-Profile radial tires, 9-inch frame rails, a lower frame height and a patented rear air suspension system that permits height adjustments in loading.

Both the 4700LP and a 4600LP model introduced last year have decks that can be lowered to 24 inches off the ground.

The 4700LP is available in wheelbases of 140 to 254 inches with gross vehicle weights up to 25,500 pounds.

The standard engine is the International DT-360 turbocharged 6-cylinder inline diesel with 170 horsepower. A DTA-360 air-to-air intercooled 185-hp engine is optional.

The 4700LP has a 6,000-pound front axle and a 15,500-pound rear axle as standard equipment. An 8,000-pound front axle and 17,500-pound rear axle are available as options.

A 5-speed manual transmission is standard. Offered as options are two other 5-speed manuals, two 6-speed manuals and one 4-speed automatic transmission.

Robert Shaughnessy, Navistar marketing vice president, listed a variety of vocational applications for Lo Profile models.

The trucks can be spec'd for retail pickup and delivery service, for commercial moving use; and for furniture, beverage, baked goods, food and newspaper delivery, he said.

They can also used by ambulance and rescue services, contractors and utility companies.

Roxanne J. Decyk, Navistar senior vice president, dealer planning and development, said the Circle of Excellence program has grown steadily since its inception.

The company feted winning dealers and their spouses in Maui, Hawaii, in January.

All full-line and medium-duty International truck dealers are considered for membership in the Circle of Excellence, which is based on market performance for trucks and parts, facilities, financial strength and other dealership performance categories.

Sales upturn spurs hike in car output

By Karen Detkowski
SPECIAL CORRESPONDENT

U.S. auto production continued to climb last week.

Assembly cutbacks were lifted as sales increased and inventories dropped. The domestic-car inventory at the end of January represented a 70-day supply, down from the previous month's 92 days.

Last week, automakers scheduled the highest weekly output of this year — 124,561 units, 16.31 percent above the previous week, but 21.05 percent below the year-ago week.

So far this year, 629,734 cars have been produced, 39.65 percent below the year-ago total.

Companies split last week's estimated production as follows: General Motors, 41.38 percent; Ford Motor Co., 25.72 percent; Chrysler Motors, 11.08 percent; Honda of America Manufacturing Inc., 7.19 percent; Toyota Motor Manufacturing U.S.A. Inc., 3.54 percent; New United Motor Manufacturing Inc., 3.29 percent; Mazda Motor Manufacturing (USA) Corp., 3.20 percent; Diamond-Star Motors Corp., 2.24 percent; Nissan Motor Manufacturing Corp. U.S.A., 1.91 percent; and Subaru-Isuzu Automotive Inc., 0.45 percent.

Last week's scheduled truck output of 85,967 increased 13.02 percent over the prior week but was 10.79 percent below the year-ago week.

Year-to-date, 435,959 trucks have been assembled, 30.79 percent below last year's production at this time.

The first Ford Explorer was completed last Wednesday at the Louisville, Ky., truck plant. The plant will assemble both 2-door and 4-door versions of the sport-utility that will replace Bronco II.

Chrysler will postpone indefinite layoffs of 724 workers at its Toledo, Ohio, assembly plant and 750 workers each at the Newark, Del., and the Belvidere, Ill., plants. The layoffs were scheduled for March 26 and have been rescheduled for April 9.

GM's Doraville, Ga., assembly plant was idle last week to adjust inventory of the Oldsmobile Cutlass Supreme. The plant resumes operations today.

All Chrysler and Ford assembly plants in the United States worked last week.

All U.S. assembly plants are expected to operate this week.

Car production jumps in Canada

Last week's scheduled Canadian car production of 24,752 increased 63:79 percent over the previous week and 21.01 percent over the year-ago week.

So far this year, 107,745 cars have been produced, 20.87 percent below last year's tally.

Truck output was scheduled at 19,372, 6.52 percent above the prior week but 13.04 percent below the year-ago week.

Year-to-date, 107,357 units have been assembled, 24.88 percent below 1989 production at this point.

Treasury suggests separate tariff for minivans, utilities

By Lindsay Chappell and Diana T. Kurylko
AUTOMOTIVE NEWS STAFF REPORTERS

While some Japanese automakers are feeling the pinch from year-old tariffs on their sport-utilities, the U.S. government is pushing to change the rules again.

One year after the U.S. Treasury Department slapped a 25 percent tariff on imported 2-door sport-utilities and cargo vans, sales for a number of import models have plummeted, and a few are even being abandoned.

But the Treasury Department is advocating a new tariff category that would would pave the way for the United States to assess 2-door and 4-door sport-utilities and minivans at the same rate.

The rate would probably be less than the 25 percent now levied on trucks, 2-door sport utilities and vans with less than two rows of seats, but more than the 2.5 percent charged on imported cars, passenger minivans and 4-door sport-utilities, according to John P. Simpson, the department's deputy assistant secretary of regulatory tariff and trade enforcement.

Treasury has petitioned a multinational advisory committee on tariffs, asking member nations to adopt the new sport-utility class internationally.

As a member of a 19-nation group that now recognizes two classes of vehicle imports — those used to transport people and those

SAE: *40,000 vehicle engineers converge on Detroit to seek, provide answers to technical problems*

By Jack Keebler
AUTOMOTIVE NEWS STAFF REPORTER

DETROIT — Global automotive technological, regulatory, environmental and related social issues will be in the forefront here this week as one of the world's largest automotive engineering conferences and expositions takes place at Cobo Center.

The theme for the 5-day event is "Engineering Innovation — The Worldwide Challenge."

At this 1990 SAE International Congress and Exposition, more than 40,000 ground-vehicle engineers and designers from around the globe will seek and provide answers to automotive technical problems.

Some 200 half-day technical sessions are planned, including 850 technical presentations.

SAE '90

Sessions will cover electronics, vehicle design, ferrous metals, manufacturing engineering, non-ferrous materials, compression-ignition engines, maintenance, rubber and plastics, spark-ignition engines, safety and human factors, heat exchange systems and fuels and lubricants.

Environmental topics such as clean air, recycling

Renault-Volvo is newest merger

French, Swedish firms team up in $40 billion vehicle venture

By Knut Moberg
SPECIAL CORRESPONDENT

AMSTERDAM, Netherlands — The Renault and Volvo groups are wasting no time implementing the broad collaborative agreement they announced here Friday.

Detail work begins today on integrating the groups' car, truck and bus operations into a combine with estimated annual revenues of 250 to 275 billion Swedish krona ($41 to $45 billion).

Renault and Volvo will retain their own identities, manufacturing and distribution organizations. Their collaboration will center on product design and development, purchasing and investments.

The agreement between the largest industrial groups in France and Sweden is the latest in a series of structural shifts in the automotive power balance in Europe.

Smaller, specialist companies are steadily falling to volume makers.

Still 'running scared,' Poling faces new problems at Ford

Poling, For

By Laura Clark
AUTOMOTIVE NEWS STAFF REPORTER

At a press breakfast in December, a reporter asked Harold "Red" Poling if Ford Motor Co. was becoming too complacent with its success.

The question pierced the center of consciousness of the company's vice chairman.

"The memories of the early 1980s are indelibly seared in my mind," Poling responded. "I'll never forget them."

"I believe in running scared . . . to always look over your shoulder because someone is always trying to beat you."

Thursday, the quietly intense Red Poling will be at the head of the entire company as he takes over as chairman and chief executive officer.

As chief of Ford's North American Automo- s, Poling closed thousands of of the Escort in 1980 because of the poor quality of the first cars. In both Europe and the United States, he gained a reputation as a cost cutter.

On Feb. 16, less than two weeks before Ford Chairman Donald Petersen's March 1 retirement, a calmer Red Poling sat before a camera for Ford's in-house television station. His message was that average profit-sharing would plummet.

"Just as we began the last decade with serious obstacles to overcome, the next decade promises to offer its own difficulties," Poling told employees. "I believe that these may well be greater than before, but I also believe that we are better prepared to face them."

With the experience he gained in Ford's crises of the early 1980s, Poling will replace Donald Petersen, Ford's most successful leader since the original Henry Ford.

And those who know Poling expect him to put as much passion into continuing Ford's black ink as he did into cleaning up the red ink of the late 1970s and early 1980s.

Ford was the most successful U.S. automaker of the 1980s. The company began the decade by losing $3.26 billion from 1980 to 1982, producing poor quality cars and trucks and cutting its work force by nearly one-half.

It ended the decade by racking up billions in annual profits, buying British luxury car maker Jaguar plc and leading the domestic automakers in both productivity and aerodynamic styling. And Ford gained more than six percentage points of market share, ending the decade with 24.61 percent of the U.S. car and truck market.

Some Ford executives are even asking reporters not to group Ford in the Big 3. They don't want to be lumped with General Motors and Chrysler Corp.

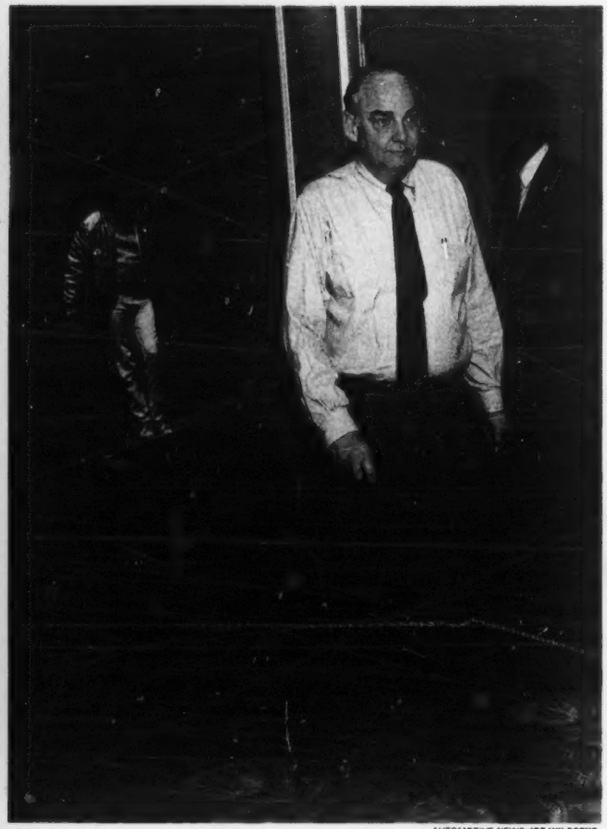
Arbitrator mulls Fiero plant closing



AUTOMOTIVE NEWS/JOE WILSSENS

Labor arbitrator Thomas Roberts leaves the hearing room. "It's going to be a difficult case to decide," he said afterward.

By Kathy Jackson
AUTOMOTIVE NEWS STAFF REPORTER

TROY, Mich. — The precedent setting case that challenges the shutdown of a General Motors plant in Pontiac, Mich., may not be arbitrable, according to the arbitrator who must decide the case.

Looking weary after hearing two long days of testimony by UAW and GM officials, labor arbitrator Thomas Roberts said the case is very complex. "It's going to be a difficult case to decide," Roberts said. "I feel a great deal of responsibility." The case "was expertly presented," he said and "the outcome means a great deal to both sides."

He he'll rule on the case within a 30-day period from Feb. 21, the day the hearing concluded.

If Roberts can't reach a decision, GM essentially will win the case.

The plant, which most recently built the 2-seater Fiero, was shuttered in August 1988, putting 2,000 employees out of work.

The union charges the plant was closed in violation of the current labor contract, which includes a morotorium on plant closings other than the ones specificially indentified by GM when the 1987 agreement was signed.

GM contends the plant is temporarily idled and could be put back into operation. A skeleton crew mans the plant.

Should GM lose, it may mean added benefits to the laid-off workers that could amount to hundreds of millions of dollars.

If the automaker wins, it will be the union's battle cry for increased job security when contract negotiations begin this summer. The contract expires at midnight, Sept. 14, 1990.

> If we lose, we lose; if we win, we know the union will be very hostile during negotiations.
>
> GM official

"I think our guys put together a hell of a case," said Dick Long, president of UAW Local 653 which represents the workers at Pontiac plant. "We saw a lot of junk thrown out there (during GM testimony) to cloud the issue, but it's going to set the stage for true job security" during this summer's contract talks should GM win the case, he said.

A GM official who did not want to be identified said it's a lose-lose situation for the company. "If we lose, we lose; if we win, we know the union will be very hostile during negotiations," the official said.

It's the first UAW case in over 25 years that will be arbitrated solely on contractural language, a UAW official said.

And it's an issue being watched around the country. Representatives from two shuttered plants and one scheduled to be shut down this spring also attended, hoping that a ruling for the union would apply to their plants, too.

Toyota spending $138 million on Tokyo deal

By Mary Ann Maskery
AUTOMOTIVE NEWS STAFF REPORTER

TOKYO — Toyota Motor Corp. is building a 14-story, 20 billion yen ($138 million) showroom in the Ikebukuro district of Tokyo.

The land is already owned by Toyota. Otherwise, given the high price of Tokyo real estate, it would cost considerably more.

The project is an indication of what it takes to attract customers these days in Japan.

An independent Toyota dealer established a highly successful community-oriented dealership in suburban Nagoya, and the corporate project is an attempt to adapt the idea to the sophisticated, crowded and expensive urban scene.

The showroom has enough space to display 100 vehicles. Side attractions to draw crowds include a full-sized theater, library and audio-visual equipment including a mobile, multi-vision screen.

Patrons can watch a video history of automotive manufacturing, take part in a workshop on automotive design, and use a computer to select a car.

The building will also house some of the company's Japanese sales operations.

GM's Opel talks in East Germany with Wartburg builders

By Richard Johnson
AUTOMOTIVE NEWS STAFF REPORTER

FRANKFURT, West Germany — Adam Opel, General Motors' West German subsidiary, is discussing possible cooperation with an East German car manufacturer.

The talks are believed to be with the automaker VEB IFA Kombinat in Eisenach, which produces the ancient Wartburg.

Opel Managing Director Louis Hughes reportedly has led an Opel delegation to the Eisenach factory for discussions, though Opel has not confirmed the visit and offered no details.

Said one Opel insider, "I wouldn't read much into it. Everyone is talking with everyone."

Eisenach produces about 70,000 Wartburgs annually and employs about 9,000 workers. Opel is considering setting up a new assembly plant that would produce 150,000 to 250,000 cars annually, according to East German reports.

Meanwhile, Volkswagen AG said it may assemble its Polo supermini in East Germany while preparing a successor for the Trabant as part of a joint manufacturing venture with IFA. Polos would be assembled at IFA Kombinat's plant in Karl-Marx Stadt.

In addition, the East German ADN press agency reported that the eventual Trabant successor will be made with 80 percent Polo components but have a completely new body. The report said production plans will be made soon.

It also said the VW-East German joint venture will produce 350,000 of the Trabant successor annually within four to five years.

VW formed a 50-50 joint venture earlier this year with IFA Kombinat for development and production of autos and light commercial vehicles in East Germany.

The joint venture is initially based at VW headquarters in Wolfsburg while the East German government follows through on plans to legalize joint ventures with foreign companies. The partnership is managed by an 8-member board composed of four representatives from each side.

VEB IFA began delivering 1.3-liter VW engines built under license in the city of Karl Marx Stadt to VW in December. In addition to the export, the units are being used to replace outdated 2-stroke engines fitted in Trabant models as well.

BMW to Japan: No dumping

By Richard Johnson
AUTOMOTIVE NEWS STAFF REPORTER

MUNICH, West Germany — Japanese carmakers are guilty of dumping in the luxury-performance segment in the United States, says BMW Chairman Eberhard von Kuenheim, but he says they won't get away with it in Europe.

GM's Opel in East Germany, above Mercedes-Benz boss urges U.S. investment in East Europe, Page 34.

No one has taken Lexus and Infiniti to court in the United States for allegedly underpricing to carve out market share. But von Kuenheim said the Japanese luxury brands are dumping and can expect a legal challenge in Europe if they try it.

Such a courtroom challenge "may not be from us, it may be someone else,

Geo sales shine in so-so-month for imports

By Jim Henry
AUTOMOTIVE NEWS STAFF REPORTER

NEW YORK — Import car sales in January were 1.1 percent higher than in the same month last year.

Imports from Japan, including such captive imports as Chevrolet's Geo models, increased 3.4 percent for the month to 146,450.

While many Japanese imports declined, Geo imports nearly doubled in January to 14,601, compared to 7,811 in the same month last year. The Geo Metro led the increase with 8,120 units, more than doubling its 1989 total.

Chrysler Motors' imports fell 38.2 percent to 5,600. The top seller, Colt, was down 39.8 percent, to 2,798.

Among the Japanese Big 3, only Honda posted a monthly increase. Honda import sales grew 2.0 percent to 15,871; Nissan-badged imports fell 6.2 percent to 27,311; and Toyota imports dropped 9.7 percent to 32,846.

All three companies build cars in the United States, and Honda Motor Co. Ltd and Toyota Motor Corp. are building more cars in here than they were a year ago.

Import sales also fell for two of the smaller Japanese manufacturers, Fuji Heavy Industries Ltd. and Isuzu Motors Ltd.

Sales of Fuji's imported Subaru models fell nearly 36 percent to 6,578.

Mitsubishi showed a month-to-month increase of 211.6 percent to 15,700, largely on the strength of the imported Mirage model, which totaled 10,656 in January, compared with 756 in the same month a year ago.

That car will soon be produced in quantity by Diamond-Star Motors Corp., Mitsubishi's joint venture with Chrysler Corp. in Normal, Ill.

The Europeans as a group showed a month-to-month sales decline.

Jaguar led the gainers with a month-to-month increase of 2.1 percent to 1,523.

BMW sales fell 13.4 percent to 4,919. But its 5-series models were up 20.8 percent at 2,054.

Mercedes-Benz dropped 7.6 percent to 4,654. And Saab fell 19.2 percent for the month, to 1,967.

Ford Festiva imports from Korea fell 7.25 percent to 5,985.

Korean imports fell 24 percent overall, including a drop of 21.7 percent in Hyundai sales to 11,883.

January was the second month that Infiniti reported sales. The luxury division of Nissan Motor Corp. in U.S.A. sold 1,071 cars. Lexus sales totaled 4,135 for the month.

Automotive News' statistics now include estimated monthly sales of such exotic makes as Rolls-Royce, Ferrari, Aston Martin, Lotus and Lamborghini. The estimates are based on last year's sales totals.

Subaru in U.S. hires bankers to review Fuji offer

NEW YORK — Subaru of America Inc. has retained the investment banking firm Lazard Freres & Co. to review Fuji Heavy Industries Ltd.'s bid to buy out the U.S. importer and distributor.

Lazard Freres will recommend "an appropriate response to the Fuji proposal which is in the best interests of company shareholders other than Fuji," a Subaru spokesman said.

Fuji owns 49.6 percent of Subaru, its U.S. sales arm. The Japanese company has offered $6 per share — about $147 million — for the balance.

Lazard Freres will report to a committee of three top Subaru officers. The group will then report to the entire Subaru board, which in turn will recommend whether stockholders should accept the offer.

Mitsubishi revives Paris-Beijing rally

TOKYO — Mitsubishi Corp. plans to bring back the Paris to Beijing rally — via Moscow — in the fall of 1991.

At 18,000 kilometers (11,250 miles), it will be the world's longest cross-country competition. The Paris-Dakar Rally is 7,500 miles and the South American Rally is nearly 9,500.

Mitsubishi proposes holding the race every other year.

Car, truck trade deficit slips in Nov.

WASHINGTON — The U.S. trade deficit for passenger cars and light trucks decreased 1.8 percent in November, following a 1.6 percent increase in October. The value of automotive exports and imports fell for the month.

The latest figures from the U.S. Commerce Department place the automotive trade deficit for November at $4.01 billion, compared with $3.94 billion in November 1988.

The U.S. automotive trade deficit for the 12-month period ending November 1989 was $45.7 billion, 4.9 percent higher than it was a year ago. The deficit for the 12-month period ended November 1988 was $43.5 billion.

The number of passenger cars imported during November declined 13.0 percent from a year ago to 355,817 units and had an estimated value of $3.97 billion. Imports of light trucks increased 10.7 percent for the month to 75,125 units and had an estimated value of $757.7 million.

The number of passenger cars exported during November fell 36.0 percent from a year ago to 44,621 units with an estimated value of $580.7 million. The number of light trucks exported in November fell 8.2 percent to 10,683. But the value of light-truck exports increased 5.1 percent to $138.0 million.

The value of passenger-car exports to Japan increased 7.8 percent for the month. The value of passenger cars exported to Canada declined 43.8 percent. The value of light-truck exports increased 52.4 percent to Canada during November but fell 80.9 percent to countries identified as "others."

Over the most recent 12 months, total U.S. automotive exports have fallen 32.3 percent, from an annualized total of 956,299 vehicles as of November 1988 to 647,849 for the 12 months ended November 1989.

Imports of cars and light trucks have also slipped on an annualized basis. The number of vehicles imported for the year ended November 1988 was 5.32 million. That number fell to 5.0 million units in November 1989, a 5.9 percent decline.

Imports of passenger cars from Japan were down 19.5 percent in December. Imports of Japanese light trucks fell 38.6 percent for the month.

Imports of cars from Canada were up 14.8 percent, while shipments of Canadian-built trucks to the United States increased 109.3 percent.

Imports of West German passenger cars increased 23.1 percent in November to 21,548 vehicles.

The number of passenger cars shipped from South Korea fell 42.7 percent in November to 19,550 units.

There was a 23.5 percent decline in the number of car imports from Sweden, 7,634.

Passenger-car imports from Mexico were down 20.1 percent in November. And just one car was shipped from Yugoslavia and three from France.

The number of car imports from Brazil, Italy and the United Kingdom increased.

The United States imported 2,100 trucks from Mexico in November, compared with none the previous November.

SAE

FROM PAGE 1

/disposal, energy conservation and noise control are expected to be an important part of the program.

Highly specific and technical in nature, the sessions are attended by engineering students, technology media representatives and experts in the field.

One of the special sessions will be a panel discussion on the design and development of the modern Indy racing car. Panelists are: Mario Illien of Illmor Engineering Ltd.; J.M. Negri, manager of special products for Buick; Hans Mezger, executive director of special products development for Porsche AG; Steve Miller, Championship Auto Racing Team project engineer for Cosworth Engineering; Jeffrey Eischen, Truesport Development Division of Truesport Co.; and A.J. Purnell, chairman of Pi Research Ltd.

The panelists are leading specialists in engine design for CART racers. At a reception following the technical session, current and past Indy car chassis and engines will be displayed.

More than 630 automotive suppliers will make engineers aware of their new materials and product developments. According to the SAE, 260,000 square feet of exhibit space have been reserved — a 15 percent increase over last year's show. Exhibit hours are 11 a.m. to 6 p.m. Monday, Wednesday and Thursday and 11 a.m. to 8 p.m. Tuesday.

Among the suppliers and manufacturers that will fill Cobo Center are General Motors, Mobay Corp., Borg-Warner Automotive, Steyr-Daimler-Puch AG and Exxon Chemical Corp. About 25 percent of the exhibitors are foreign-based firms.

In addition to the exposition and technical sessions, 40 continuing education seminars will be held during the week.

Technical tours in conjunction with the exposition and congress will leave from Cobo Center at 8 a.m. and 11 a.m. Tuesday for the Buick City assembly plant in Flint, Mich.; at 8:30 a.m. Wednesday for Chrysler's Trenton engine plant in Trenton, Mich.; at 1 p.m. Wednesday for the Rockwell Automotive Technical Center in Troy, Mich.; and at 8:30 a.m. Thursday for Ford's transmission plant in Livonia, Mich.

Other highlights of the meeting include the international banquet at 7 p.m. Thursday, featuring Secretary of Transportation Samuel K. Skinner as guest speaker, and a keynote address at 9 a.m. Monday by Georges Douin, executive vice president of Regie Nationale des Usines Renault.

TARIFF

FROM PAGE 1

used to move goods — the United States cannot create the new multi-national class unilaterally.

But if the new class is adopted, the United States would be free to set its own tariff rate.

The proposed action would cover a growing segment of the U.S. market. Japanese companies shipped some 200,000 sport-utilities and minivans to the United States in 1988 and 270,000 in 1989.

Early last year, the U.S. Customs Service ruled that sport-utilities and minivans intended for passenger use were subject to the 25 percent truck tariff.

Under a storm of protest from import interests, the Treasury Department later stepped in and ruled that minivans with two or more rows of seats and 4-door sport-utilities are subject to the lower car tariff.

Most of last year's imported sports-utilities and minivans were classified as cars. Approximately 90,000 of 270,000 entered as trucks, paying a 25 percent duty on the cost of the vehicle.

Some Japanese automakers have been hampered. Mitsubishi Motor Sales of America Inc., Nissan Motor Corp. in U.S.A., Toyota Motor Sales U.S.A. and American Isuzu Motors Inc. are dropping vehicles with languishing sales.

The companies had predicted growth in minivans and 4-door sport-utilities long before the Customs ruling. Four-door versions of the Toyota 4Runner, Mitsubishi Montero, Nissan Pathfinder and Isuzu Trooper II have been introduced in the past year and a half.

But with import duties of $2,000 to $2,500 per 2-door vehicle, sales of 2-doors have suffered.

Nissan raised the price of the 2-door Pathfinder approximately $1,500 shortly after the ruling. A loaded model now sells for $21,814 — $1,665 more than the same vehicle with four doors.

"I'm not sure what the government's intention was. But if it was to drive us out of the 2-door market, they've succeeded," complained Rick Lepley, vice president of sales for Mitsubishi.

The company will stop selling its 2-door Montero sport-utility next year because, in Lepley's words, "we just can't be price-competitive under these circumstances."

Strong sales of new 4-door models have offset much of the 2-doors' losses.

Two-door Montero sales, for example, plunged from 5,211 in 1988 to 1,645 last year and are projected at only 500 this year. Four-door Monteros jumped from fewer than 3,000 in 1988 to 11,701 last year.

One way around the import price penalty is transplant production. American Suzuki Motor Corp. expects some benefit from CAMI, a joint-venture with General Motors in Ingersoll, Ontario. At full production, the plant will give Suzuki and GM 80,000 Sidekick/Tracker units a year.

The tariff issue is bound to generate debate this year as trade tensions increase and importers pin more hopes on the sport-utility and minivan markets.

Yet some believe Treasury's effort to create a new tariff classification is intended as a compromise on the 25 percent duty. The United States is the only country that assesses some sport-utilities and minivans as trucks.

John Rehm, a trade expert with the Washington law firm Dorsey & Whitney, suggests that the proposal is intended as a bargaining chip for upcoming General Agreement on Tariffs and Trade talks with Japan.

But if other countries agreed to a separate classification for sport-utilities and minivans, the U.S. could reduce its 25 percent tariff. That would likely be tied to reciprocal concessions from Japan on U.S. goods, Rehm said.

Treasury has asked the Harmonized Systems Committee of the Customs Cooperation Council, a multi-nation group that advises governments on tariff levels, to endorse the proposal for a new tariff category. The group meets in Geneva in April.

In October, member nations approved a request from Japan to reclassify the Pathfinder and Suzuki Samurai as cars in the United States. Only the United States dissented.

Robert McElwaine, former president of the American International Automobile Dealers Association and a trade consultant, believes that Detroit has been lobbying hard to retain the 25 percent levy that import dealers spent $157,000 in legal fees to overturn.

The Big 3, fearing that the 25 percent tariff may be reduced, "have sent some of their biggest guns to convince the trade staff committee," McElwaine said.

Meanwhile, import dealers and importers are lobbying to repeal the 25 percent tax, charging that it was illegally imposed by President Johnson when Germany joined the Common Market and raised the tax on U.S. chickens. The basic duty on trucks had been 8.5 percent.

Truck tariff started with chickens

The 25 percent duty on trucks, sport-utilities and vans originated as a European tax on American chickens. A brief history:

- **1962:** West Germany, the newest member of the European Common Market, adopts existing European import restrictions against frozen U.S. poultry.
- **1963:** Johnson administration retaliates by hiking import tariffs from 8.5 to 25 percent on pickup trucks and German brandy.
- **1964:** Volkswagen withdraws its imported pickup truck from the U.S. market.
- **Early 1970s:** U.S. automakers begin importing Japanese-made truck bodies, which are exempt from the 25 percent tariff. Some Japanese importers ship chassis and bodies separately.
- **1984:** Nissan begins assembling pickups in Smyrna, Tenn.
- **Jan. 1, 1989:** The Trade Reform Act of 1988 goes into effect, taxing any vehicle principally used for persons at 2.5 percent and vehicles intended for transporting goods at 25 percent.
- **Jan. 4, 1989:** In answer to American Suzuki, U.S. Customs announces that trucks, minivans and sport-utilities fall in the 25 percent class.
- **January 1989:** Treasury agrees to reconsider the tariff ruling.
- **February 1989:** Treasury decides that sport-utilities with four doors are cars, paying a 2.5 percent duty, and those with two doors are trucks, paying 25 percent. Minivans must have "one or more rows of additional seats" to be considered a car.

Camaro, Cavalier incentives doubled

Chevrolet last week doubled its retail cash incentives on 1989 and 1990 Camaros and Cavaliers. The rebate now is $1,000; it expires May 2.

Also, Chevrolet reduced the retail rebate on 1989 and 1990 Astros from $750 to $500 for deliveries made March 8 through May 2. All-wheel-drive and extended Astro models are excluded from the rebate program.

Car output of 138,578 is 1990 high

By Karen Detkowski
SPECIAL CORRESPONDENT

With all car assembly plants operating last week, U.S. auto production again jumped ahead of the prior week's build.

Last week, automakers scheduled the highest weekly output of this year — 138,578 units, 12.39 percent above the prior week, but 5.53 percent below the year-ago week.

So far this year, 767,057 cars have been produced, 35.64 percent below the year-ago total.

Companies split last week's estimated production as follows: General Motors, 45.92 percent; Ford Motor Co., 23.60 percent; Chrysler Motors, 10.82 percent; Honda of America Manufacturing Inc., 6.46 percent; Toyota Motor Manufacturing U.S.A. Inc., 3.18 percent; New United Motor Manufacturing Inc., 2.96 percent; Mazda Motor Manufacturing (USA) Corp., 2.88 percent; Diamond-Star Motors Corp., 2.09 percent; Nissan Motor Manufacturing Corp. U.S.A., 1.69 percent; and Subaru-Isuzu Automotive Inc., 0.40 percent.

Scheduled truck production last week totaled 83,764 units, 0.78 percent below the previous week and 11.67 percent below the year-ago week.

Year-to-date, 518,178 trucks have been built, 28.41 percent below this time in 1989.

GM's Allante line at the Detroit-Hamtramck plant was idled last week because of a material shortage. The plant is scheduled to resume output today.

GM's Wentzville, Mo., plant closed last week for model changeover. When the plant resumes production March 26, it will build 1990 Pontiac Bonnevilles and Oldsmobile 88s and 1991 Buick Park Avenues.

GM scheduled its Janesville, Wis., car assembly plant for Friday overtime last week. The plant produces Chevrolet Cavaliers.

Ford's Wayne, Mich., Escort plant returned from model changeover today. The plant is producing the redesigned 1991 Escort.

Ford slated daily overtime last week at its Wixom, Mich., car plant and its St. Paul, Minn., and St. Louis truck plants.

Chrysler's Toledo, Ohio, Grand Wagoneer line was idled last week to continue inventory adjustment. The plant is scheduled to resume production March 5.

Car build rises 5% in Canada

Canadian automakers last week scheduled 24,571 units, 4.93 percent above the previous week and 16.99 percent above the year-ago week when Chevrolet Lumina production was still accelerating and Toyota Corolla production had not begun.

So far this year, 130,980 cars have been produced, 16.48 percent below the year-ago total.

Truckmakers targeted last week's production at 19,588 units, 5.39 percent above the prior week but 8.95 percent below the year-ago week.

Plastics on the thermo seat

Modern, durable plastics like the APV side panels in the Budd Co. exhibit improve auto efficiency but will create disposal problems when the vehicle becomes a hulk. Several papers on plastics recycling challenges were presented at last week's SAE convention in Detroit. Story, Page 2.

New auto problem: tougher CFC rules

Earlier ban seen; quick sub needed

By Mary Connelly
AUTOMOTIVE NEWS STAFF REPORTER

DETROIT — U.S. vehicle manufacturers are bracing for a climax this spring to the global campaign to wipe out chlorofluorocarbons.

By June, global efforts to reduce CFCs will likely result in a virtual ban of the environmentally damaging chemical compounds by 2000.

Representatives of U.S. vehicle makers will be in Geneva this week for a global conference that is expected to lay the groundwork for an accelerated and more stringent timetable to wipe out CFC use.

At stake for U.S. vehicle makers:

- Manufacturers will have to engineer alternative air conditioning systems for cars and trucks. Current air conditioning systems use a refrigerant containing CFCs. But use of a non-CFC cooling medium dictates significant engineering changes including compressor redesign and cooling capacity upgrades. In addition, a new lubricant compatible to the redesigned system must be found.
- A new, less environmentally damaging refrigerant compatible to the existing fleet of cars and trucks will have to be found. An estimated 75 million cars and trucks will be affected if CFC use is eliminated by 2000. Non-CFC refrigerants developed for new cars and trucks are not compatible with existing fleets.
- Automakers must find an as-yet-unknown compound that can be used to clean electronic componentry without reducing reliability. Current cleaning solvents contain CFCs.

Grappling with the issue of CFC replacement has become of such importance that a technical session on the subject at last week's SAE International Congress and Exposition in Detroit drew a standing-room-only crowd.

Global reduction of CFCs currently is sought under terms of the Montreal Protocol, an international agreement ratified by the United States and 30 other countries in September 1987. The U.S. EPA has adopted CFC regulations based on the Protocol.

But discussions are now under way to revise the Montreal Protocol, and a proposal calling for accelerated CFC elimination and a ban by 2000 is anticipated this spring, according to those who monitor the issue.

"A reassessment process is under way now on a global basis," said David Bateman, technical service consultant for DuPont Co., the largest manufacturer of refrigerants. "We anticipate that a decision will be reached in June as to how the Montreal Protocol will be changed. The changes are most likely to take effect Jan. 1, 1991."

The Protocol, which took effect Jan. 1, 1989, freezes production of regulated CFCs at 1986 output. A

Senate's air bill hits floor today

By Diana T. Kurylko
AUTOMOTIVE NEWS STAFF REPORTER

WASHINGTON — A compromise bill that softens the impact of clean air legislation on automakers will be introduced on the Senate floor today.

But last week's agreement — which partially shifts the burden of cleaner air to the oil industry — produced no audible sighs of relief in Detroit, Japan or Europe.

After three weeks of closed-door talks between the White House and a dozen key senators, many issues remain unresolved. As one Chrysler Motors official put it, "the devil is in the details, and we don't know what those details are yet."

But the agreement signals at least a partial victory for the auto industry in four key areas:

- The specter of having to build cars that run on alternative fuels is diminished. Instead of mandating production of alternative-fueled

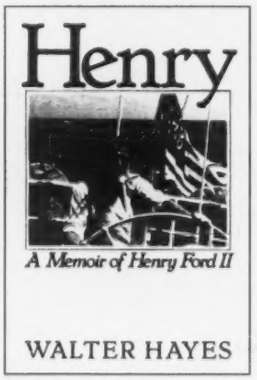
Inside story of Iacocca ax

By Edward Lapham
MANAGING EDITOR

Henry Ford II had Lee Iacocca in his sights for three years before he fired him in July 1978, according to a book scheduled for publication this June.

The book, *Henry: A Memoir of Henry Ford II*, was written by Walter Hayes, a retired Ford executive who was vice president of public affairs.

"It was 1975 when Henry Ford II decided the time had come to replace Lee Iacocca as president of the Ford Motor Co.," wrote Hayes, detailing how "there was never any prospect that they would be buddies, although they could well have been better allies."



Henry: A Memoir of Henry Ford II; by Walter Hayes; Grove Weidenfeld, New York, $19.95, June 1990; 336 pages

The book also emphasizes the importance of international experience to Henry Ford — who Hayes says considered himself English except for his citizenship — and Iacocca's lack of it.

And Hayes recounts in some detail how in February 1972 German industrialist Herbert Quandt offered to sell 25 percent of Daimler-Benz for $450 million to Henry Ford.

The author sets up Iacocca for the ax for more than 100 pages. In

SATURN RISING

Workers fired up as plant scurries toward pilot production

By Lindsay Chappell
AUTOMOTIVE NEWS STAFF REPORTER

SPRING HILL, Tenn. — After four years of construction, Saturn Corp. is ready to begin pilot production of finished cars this month at its $3 billion car plant in Tennessee.

Three to four cars a week are now making practice runs down the assembly lines. The pace of work is accelerating to meet a June date for the start of commercial production.

Bins of metal parts are beginning to accumulate near the four Komatsu presses in the stamping plant. Two more presses have yet to be delivered, and the interior plastic parts operation still has to install a half-dozen office-sized injection molding machines by summer.

"We'll make it," assures manufacturing engineer John Reiff, busily installing an electrical system along one of Saturn's general assembly lines.

Plant officials may be slightly defensive. Skeptical media reports have hung over the project, which was announced with great fanfare more than six years ago. But the clock will soon separate fact from hype at Saturn, scheduled to build up to 240,000 coupes, sedans and station wagons annually in the early 1990s.

Popular, durable plastic faces dilemma on recycling

By Jack Keebler
AUTOMOTIVE NEWS STAFF REPORTER

DETROIT — Tough fuel economy standards have forced automakers to use hundreds of pounds of plastic per vehicle to reduce weight. And the trend has been toward even greater usage.

But vehicle-materials recyclers and environmentalists say it's reckless and expensive to build high plastics-content vehicles without a plastics recovery infrastructure or viable recycling process.

Plastic has no scrap value because it is not recycled like steel and aluminum. And automotive shredders say they won't accept vehicles which have insufficient scrap value.

Some carmakers have even begun to question the marketability of vehicles made largely of nonrecyclable materials. Will environmentally-aware customers buy nonrecyclable vehicles?

Chief among the sophisticated but nonrecyclable plastics is SMC, or sheet-molded composites, used as exterior skin on some vehicles, including the Chevrolet Corvette, the Pontiac Fiero, and the General Motors APVs.

APV production is expected to reach 200,000 per year. The GM vans weigh in with 325 pounds of sheet molded composites per vehicle plus about 112 pounds of interior plastics.

"SMC is a problem for recyclability," said B.E. Swanson, executive engineer of materials engineering at Chrysler and current chairman of the Automotive Composites Consortium. "As good corporate citizens, Chrysler has made the choice to use only recyclable thermoplastics on future body panels."

A BMW spokesman also voiced concerns during the SAE Congress and Exposition held in Detroit last week.

"Carmakers could be using significantly less plastic in future models unless solutions are found for recycling," said Christoph Huss, a product information manager for BMW of North America. "Our researchers were looking at a three-piece, plastic-body system for future models," Huss said. "But that work is now put aside. We're thinking our domestic, and soon our U.S. customers, might not want to drive such a nonrecyclable car."

Currently, automotive recyclers send nonrecyclable plastics to incinerators or landfills. But there is growing environmental legislation that prevents incineration or landfill acceptance of certain plastics considered hazardous waste in high-population areas. And so, car shredders or recyclers are incurring higher costs to transport the waste to incinerators or landfills in the Midwest and the South, where laws are less restrictive and landfill operators charge high dumping fees. Prices vary from $25 to $250 per ton.

Recyclers, balancing the profit from the recovery of vehicle metal scrap against the loss on the waste or "shredder fluff," say the profit margin on newer vehicles is narrowing quickly.

"Basically, the car you are producing has become, due to the inability or difficulty in landfilling the fluff, unrecyclable," said Robert K. Waxman of Waxman Metals Group, a multi-million-dollar recycling firm in Hamilton, Ontario.

He said the array of complicated

Ford Motor Co.'s Ghia studio takes the wraps off Zig and Zag at the Geneva auto show this week. Zig, a compact 2-seater, and Zag, a minivan, are a response to the Japanese concept cars shown at last fall's Tokyo show.

Volkswagen to trim Corrado price, options

By Dutch Mandel
AUTOMOTIVE NEWS STAFF REPORTER

PANAMA CITY, Fla. — Volkswagen United States Inc. will offer a stripped-down Corrado sports car in the 1991 model year to broaden the car's appeal and pump up its sales.

Also, while VW officials confirmed the Corrado will have a V-6 in the 1992 model year, the U.S. marketing arm will ask VW engineers to explore methods to hype the car's perceived performance characteristics — through exhaust note and suspension adjustments.

"We aren't going to make our 10,000 (projected 1990) sales at the rate we're going," said William J. Young, vice president of Volkswagen United States. "We launched the car during a difficult time in a tough market segment. We overequipped the car. There's too much in the car to launch with."

From its fall 1989 introduction through February, VW has sold 643 Corrados.

Young said the company is seeking ways to "take content out of the car" with an aim at cutting the Corrado's $17,900 base price by some $2,000. Among items Young said are on the replacement list are power windows, power mirrors, central door-lock system, trip computer, cruise control and the high-line Heidelberg IV AM/FM cassette stereo with six amplified speakers.

Options on Corrado include anti-lock brakes, power sunroof, metallic paint, leather seats and a "cold climate package" that includes heated front seats and heated windshield washer nozzles.

But "decontenting" Corrado could be more difficult than marketers believe. Since it was developed primarily for the U.S. market, it was made as a high-line model. The doors, for example, were designed to accept only power windows.

Also to widen Corrado's appeal, VW has developed an automatic transmission. That option, to be offered in the 1991 model year, will add to the car's base price.

Young said the Corrado's 1.8-liter, supercharged 4-cylinder engine is a strong powerplant, but delivers top-end speed that he said may not be suitable for the sport coupe market.

"We are looking at ways to take top-end performance out and give (it to the) lower-end," Young said. "I frankly think it's irrelevant if it can go 140 mph."

Young said changing the engine's performance without recertifying it to meet U.S. emissions standards is the challenge. In the interim, VW United States officials are requesting of VW AG engineers that a "noisier" exhaust note be built into U.S.-bound Corrados. Currently, all of the 20,000 Corrados assembled for worldwide sales get mufflers that meet Swiss noise standards — the most stringent in the world.

Mazda shifts execs at U.S. plant

By Dutch Mandel
AUTOMOTIVE NEWS STAFF REPORTER

FLAT ROCK, Mich. — Mazda Motor Manufacturing (USA) Corp. has made three top-level personnel changes.

As of March 1, Osamu Nobuto holds the newly created position of chairman of Mazda Motor Manufacturing (USA), which builds the Mazda 626 sedan, MX-6 coupe and Ford Probe. "Mr. Nobuto will oversee Mazda's U.S. manufacturing from a global perspective," said Mazda spokesman Jim Gill.

Nobuto had been president of Mazda Motor Manufacturing (USA) since it was established in 1985. He will remain on Mazda Motor Corp.'s board of directors. He will return to Hiroshima, Japan, and will report to Norimasa Furuta, Mazda Motor Corp. president.

Filling Nobuto's spot as Mazda Motor Manufacturing (USA) president is Masahiro Uchida, former executive vice president of the company. Uchida will be responsible for all production operations, personnel, purchasing and corporate planning functions.

Taking over as executive vice president of operations is Mamoru Takebayashi, former general manager of Mazda's Hofu, Japan, manufacturing plant. Takebayashi, who will move from Japan to Michigan, ran the plant upon which the Flat Rock facility was modeled.

Nobuto began his Mazda career in 1959 as a chassis design engineer. In 1977, he moved to the United States as manager of Mazda Technical Center Inc. in Irvine, Calif. A year later he returned to Hiroshima as manager of Mazda's Cost Control Division and later became manager of the office of international business development. In 1985, he was named U.S. operations president.

Uchida started with Mazda in 1957 and was named an officer of the U.S. manufacturing company in May 1985. He is a managing director on Mazda's board of directors.

Nobuto Takebayashi

Takebayashi joined Mazda in 1959. He became deputy general manager of Mazda's Hofu plant in 1985 and was given responsibility for the Assembly Division in 1986. In 1987, he was elected to Mazda's board of directors, and in 1989 he was named general manager of the Hofu plant.

Mazda has confirmed it is studying the feasibility of building trucks in the United States, but has said that without major changes to the Flat Rock plant, truck manufacture would take place in a separate facility.

Corrections

- A late news item in the Feb. 26 issue incorrectly identified the state where Scania USA's headquarters is located. The truck importer is headquartered in Orange, Conn.
- A story and headline in the Feb. 26 issue misstated the direction of the U.S. vehicle trade deficit in November. The deficit increased.

AUTOMOTIVE NEWS/JOE WILSSENS

Donald Petersen, right, hands the company and keys to the first 1991 Escort to Harold Poling.

Petersen's final advice: Cut costs, product cycle

By Laura Clark
AUTOMOTIVE NEWS STAFF REPORTER

DEARBORN, Mich. — Donald E. Petersen, the former engineer who retired as chairman of Ford Motor Co. last week, said Ford's two biggest problems are its long product cycles and high development costs for individual product programs.

"The biggest problem for us, it seems to me, is that it still costs us too much for any given program we do, and it takes us too long," Petersen told a group of automotive journalists during one of his last interviews as Ford chairman. Harold "Red" Poling succeeded Petersen as chairman March 1.

Petersen said the company must change the way it develops cars and trucks and find "new ways, simpler ways" to bring them to market. The company has agreed on some new approaches, which are being incorporated into future product programs such as the U.S. Tempo/Topaz replacement and the European Sierra replacement.

The Tempo/Topaz debuted in May 1983 as 1984 models, and their replacements will debut as 1994 models. The 10-year product cycle for the Tempo/Topaz, which has been typical at Ford, is more a "financial cycle," meaning the time it takes to recoup the investment on a product.

"To go faster, you not only have to know how to go faster, you have to know how to do it for less money or you can't afford to go faster — it takes both," said Petersen.

Ford has the ability to go faster in some cases, but it doesn't see frequent changes as necessary because of consumer tastes. For instance, Ford has said owners of its Lincoln Town Car have said they don't want frequent changes.

Ford has been criticized recently for not changing the sheet metal on its cars as fast as the Japanese. Honda has had three all-new Accords since 1982, while the Tempo/Topaz has undergone one freshening in sheet metal since 1983. But Petersen said the Japanese are changing their vehicles so frequently, some Japanese cars and trucks are starting to look alike.

He said one reason Ford is spending more than it should on future products is that the automaker "does not do a good enough job (of engineering) up front and, as a result, we change tools a lot more."

"We process far more changes through a program than the typical Japanese company will," said Petersen.

"We can help ourselves a great deal by doing much more sophisticated work — let's call it research or advance — so as we start the serious stuff where there are going to be hard tools, new machinery, all the expensive stuff, we're pretty darn sure we know what we're talking about — feasibility and things — and that sticks."

He said he is worried about the gradual erosion of American-owned core component makers — such as machine tool and electronics firms. He said the U.S. auto industry sometimes does not get the leading-edge technology because those industries are largely based overseas.

Honda now thinks twice when rushing automation

By Mary Ann Maskery
AUTOMOTIVE NEWS STAFF REPORTER

TOKYO — Honda Motor Co., like every major Japanese company, is aiming for 30 percent automation on final assembly. But it is not about to repeat earlier mistakes by rushing into it.

Honda "wasted a huge amount of money" in a rush to install automation in the early 1980s, according to Senior Managing Director Shoichiro Irimajiri.

But when it came time for a new model change, much of the new equipment proved useless, he said.

Today's automation move is fueled largely by a severe labor shortage in Japan combined with a market demand for greater diversity. Despite immediate needs, though, the Japanese are taking a methodical approach. They are willing to wait two to three years to develop the right system.

"In the early '80s we all thought automation was better in every way, but in 1985 we had to re-think automation," Irimajiri said. "There were so many problems. The engineering people have to work closely with r&d. We had to learn."

Honda last May introduced a third line at Suzuka, the company's largest plant. The new line is 100 percent automated in welding and 60 percent in painting. It is 18 percent automated in final assembly, with a target of 30 percent in about two years.

Honda practiced on an experimental line at Suzuka for nearly five years before going ahead. On that line, which produced 200 cars a day, Honda tested software and hardware and worked out problems interfacing

Jaguar, Ford business plan expected by month's end

By Daniel Ward
STAFF CORRESPONDENT

COVENTRY, England — Improving supplier quality and manufacturing efficiency are understood to be the key issues addressed in the first business plan being put together by the Jaguar/Ford transition team.

The plan will be completed within a month, and approval from Ford Motor Co. in the United States is expected by April.

The first plan will determine what financial and technical assistance Jaguar needs to carry out its current model and marketing plans.

Jaguar Chairman John Egan told *Automotive News* a second plan will be compiled over a longer period. It will consider what else Jaguar must do to justify Ford's $2.5 billion investment in the company.

That will include the development of a smaller model to rival the BMW 5 series and a substantial expansion of production capacity. Output of the small Jaguar would probably begin at 50,000 a year, which equals the firm's current production.

In the short term, Egan said, the Ford takeover will not enable Jaguar to introduce new models now under development any faster.

It will be 1993 before the F-type sports car is ready. The replacements for the XJ6 and long-wheelbase sedans will not debut until 1995. Ford's engineering assistance in the next few years will be mainly in advanced research.

The transition team of more than a dozen Ford executives appears to be concentrating initially on component quality and manufacturing efficiency.

Volvo-Renault link could alter heavy-truck rankings

By Richard Johnson and Jim Henry
AUTOMOTIVE NEWS STAFF REPORTERS

The partnership between the Renault group and AB Volvo has the potential to create America's biggest heavy-duty truckmaker as well as the world's largest producer of those vehicles.

The Renault-Volvo proposal poses a much less significant impact on the U.S. passenger-car market, though Volvo is said to be talking with other companies. A Swedish report linking Volvo, Chrysler and Mitsubishi could be of more immediate interest in the United States.

Additional information about the longer-term implications of the collaboration is expected from Pehr G. Gyllenhammar, chairman of AB Volvo, and Raymond H. Levy, chairman of Renault, at a press conference in Geneva today.

French Industry Minister Roger Fauroux said in an interview last week with the French newspaper *La Tribune de l'Expansion* that Renault will attempt to sell its cars in the United States once again, through Volvo dealers, but spokesmen for Renault and Volvo denied that.

"I'd be shocked," said Paul Capella, DRI Europe's French specialist. "Renault's name is dirt in the U.S. in terms of marque image. It would probably be the kiss of death for Volvo."

Volvo dealers groaned at the slightest hint that Renault might come back to America in their showrooms.

"Renault is a name it'll take two generations to forget, like Lancia or Fiat. I seriously doubt this would happen," said Donald Merker, president of The Volvo-Saab Store in Yonkers, N.Y.

"I haven't seen Renault be successful in the United States for the last 30 years," said Michael Lazarus, co-owner of Volvoville USA in Massapequa, N.Y., Volvo's top-volume dealership

"Hopefully, this (Renault) disease won't spread to us. Fortunately, there are no more Renault dealers in this country," he said.

Renault's passenger-car exports to the United States ceased after it sold American Motors to Chrysler Corp. in 1987, though it still exports components for the Renault-designed Eagle Premier.

Rather than an out-and-out merger, the Renault-Volvo deal is aimed at longer-range, less-visible goals in technical and industrial cooper-

see DEAL, page 33

Rumor lumps Volvo, Chrysler, Mitsubishi

A Swedish newspaper reported last week that Chrysler Corp., AB Volvo and Mitsubishi Motors Corp. are discussing development of a new luxury sedan that would be produced in the United States and marketed separately under a new brand name.

***Goteborgsposten*, a prominent daily in Volvo's Gothenburg headquarters town, said the recently announced Volvo-Renault equity swap could be the first step in a "global mass marriage" involving Volvo, Renault, Mitsubishi and Chrysler.**

None of the companies involved confirmed the report.

According to the report, wide-ranging discussions are under way, including joint Volvo-Mitsubishi production in Europe; shared componentry; and joint development

Honda engine output grows steadily in Ohio

By Lindsay Chappell
AUTOMOTIVE NEWS STAFF REPORTER

Honda of America Manufacturing Inc.'s efforts to more than double engine output at its Anna, Ohio, plant are inching along.

Honda will raise output from 219,805 4-cylinder engines in 1989 to about 300,000 this year.

Plans call for the 4-year-old operation to reach capacity and supply all 590,000 U.S.- and Canadian-built Honda cars in 1991.

Until last year, the plant produced only 1.5-liter and 1.6-liter engines for the 4-door Civic. In August, it began manufacturing 2.2-liter engines for the Accord, which is assembled in Marysville, Ohio. This year, Anna will produce about 140,000 Accord engines, up from 61,577 in 1989.

The gradual expansion of engine output is tied to production at the company's new East Liberty, Ohio, plant, where Honda began building 4-door Civics last November. Civic production is slowly being phased out of Marysville so more space can be devoted to Accords.

"We prefer to do things gradually," said spokesman Roger Lambert. "It gives us the chance to prove the systems and also to train more. We don't mind operating under capacity for a while as we bring our people up to snuff."

East Liberty will reach full line speed this summer. By 1991, combined output from Marysville and East Liberty will require about 510,000 engines. Honda's Civic hatchback plant in Alliston, Ontario, can build 80,000 cars annually.

The engine plant recently began manufacturing pistons, as well as casting and finishing cylinder heads, brake discs and suspension arms.

Honda is the only Japanese manufacturer in the United States that casts its own engine blocks and aluminum wheels.

During the past few weeks, the Honda plant also began mass production on lines that forge and machine driveshafts.

Later this year, the plant will increase automation by adding computer controls to its iron-casting operations and replacing a remote-control system installed last year.

The addition of iron-casting capabilities to produce engine blocks helped boost the Accord's U.S. content to about 73 percent, the highest of any Japanese-nameplate vehicle made in the United States.

NADA expects $3 million profit despite operating deficit

By Lindsay Chappell
AUTOMOTIVE NEWS STAFF REPORTER

The National Automobile Dealers Association projects an operating shortfall of almost $3 million this year, but the profit-making side of NADA's operations will provide net income of $3 million.

The trade organization has almost 20,000 car-dealer members and a proposed 1990 budget of about $19 million. That budget exceeds its projected 1990 operating revenue by more than $2.9 million.

But the organization's for-profit NADA Services Corp., with expected 1990 revenue of more than $26 million from ventures like manager-training workshops, will funnel nearly $2.4 million in profits into the association this year.

An additional contribution of more than $4.7 million will come from NADA investments and royalties. NADA anticipates paying $1.2 million in income tax, which it projects will leave it with a 1990 net income of $3 million.

"The NADA isn't very typical of trade associations at all," said Frank McCarthy, NADA executive vice president. "Contrary to what some of our own members think, our income isn't just from annual dues. We're half non-profit, half for-profit. As a result, we can afford to operate at a very large deficit if necessary."

The association lost 261 members last year, ending the year with 19,877.

NADA officials say the decrease was mild compared to membership losses sustained during the 1980-82 recession. McCarthy said last year's decline was due to slower auto sales and budget-tightening by the nation's auto dealers as well as a shift toward more chain dealerships.

McCarthy said the association expects no further drop in membership. A new policy adopted last year allows dealers to join the NADA at one price and purchase memberships for additional outlets at reduced prices.

Canadian vehicle sales increase 7.75% in January

By Bill Vance
SPECIAL CORRESPONDENT

TORONTO — Combined Canadian sales of imported and domestic vehicles rose 7.75 percent in January.

The increase came on the heels of a 15.6 percent drop the previous month, Canada's coldest December in a century.

Total imported and domestic car sales were up 4.8 percent from January 1989, while total imported and domestic trucks showed a 13.3 percent gain.

Domestic car sales, which had been off 17.2 percent in December, were off only 310 units from year-ago levels. Import cars did even better, climbing 16.6 percent in January following a 11.1 percent fall in December.

Chrysler Canada Ltd. posted a 3.7 percent gain in domestic car sales and General Motors of Canada Ltd. was up 2.3 percent. Ford Motor Co. of Canada Ltd. fell 8.8 percent.

Bill Atkinson, GM vice president of marketing, called the January market "subtly buoyant." He credited GM's sales gain to selective incentive programs and the recent introduction of 4-door sedans in GM's mid-sized family cars.

Despite Ford's sales decline, Udo Kaul, vice president of general sales, said that Taurus had its best-ever January, and Thunderbird/Cougar, Crown Victoria and the new Lincoln Town Car were well ahead of last year.

Among the imports, every Japanese make increased car sales.

With the exception of Mercedes-Benz — which had four more sales in January than a year ago — each luxury European make posted a decline. Saab was off 52.6 percent.

Acceleration problem probed in 1988-89 Thunderbird, Cougar

By Diana T. Kurylko
AUTOMOTIVE NEWS STAFF REPORTER

WASHINGTON — The National Highway Traffic Safety Administration has opened an engineering defect investigation into an unexplained acceleration problem with the 1988-89 Ford Thunderbird and Mercury Cougar.

The agency suspects problems in the electronic engine control module. NHTSA said it has received 105 consumer complaints of the cars accelerating suddenly from 45 mph to as high as 70 mph. Owners alleged the problem has caused 10 accidents, seven with injuries, NHTSA said.

The safety agency started its investigation of a possible defect last Oct. 4 and upgraded it to an engineering analysis in February. A recall could affect 423,171 cars.

The investigation covers two generations of the Thunderbird/Cougar. An all-new model was introduced in the 1989 model year.

NHTSA also reported several new investigations in its monthly defect report:

- 1984-88 Dodge Caravan and Plymouth Voyager; 1.2 million minivans. NHTSA has received three complaints of broken cables that hold the spare tire under the vehicle.
- 1987 Dodge Ram D250 4x4; 99,000 vehicles. The U.S. Customs Service said the front frame rail was cracked by the left front spring rear hanger in three vehicles. In one vehicle, the front end dropped and cut the brake lines, causing an accident.
- 1984-90 Chevrolet Corvette; 180,000 cars. NHTSA reported three complaints — involving two accidents and one injury — of failure of a rear suspension tie rod or the socket, resulting in control problems.
- 1989 Jeep Cherokee with anti-lock brakes; no number given. NHTSA has received three complaints — including one accident with one injury — of loss of power brake boost.

Ford may hike Econoline output

Increase would help meet demand for van conversion chassis

By Joseph Bohn
AUTOMOTIVE NEWS STAFF REPORTER

Some industry officials have predicted potential shortages of van conversion chassis, and Ford Motor Co. is moving closer to that situation.

The company's days' supply of Econolines has been dropping quickly enough for it to consider boosting production at Lorain, Ohio, in the second quarter.

As of mid-February, its supply of Econolines dropped to 74 days, down from 94 days at the end of December.

If the trend continues, Ford will likely increase Lorain production during the April-June quarter, according to company sources. At this point, second-quarter production plans have not been finalized.

But Aerostar conversion sales have dwindled to almost nothing, and the future of that vehicle in the conversion market will be rather limited.

"(Full-sized) van chassis right now remain fairly tight. We feel very positive about the market for van conversions and other Econoline products," said Jerome Mittman, Ford Division RV sales manager.

Ford has added four van conversion companies to its consignment pool account. They are American Vans Inc. of Danielsville, Ga.; Explorer Van Co. of Warsaw, Ind.; Seven-O-Seven Industries Inc. of Elkhart, Ind.; and Tiara Motor Coach of Nappanee, Ind.

Mittman expects to sign four or five more companies within 30 days.

But sales of Aerostar conversions have tumbled, and it's doubtful that Ford will continue offering an RV upfit package for Aerostar beyond next year.

The Aerostar has never really been a big success in the van conversion market.

At the end of the 1989 model year, when the auto and RV markets as a whole slowed down, sales of Aerostar conversions almost ground to a halt.

They never really recovered.

Mittman noted that only 4,700 Aerostars were converted in the 1989 model year, representing 2 percent of Aerostar production.

The figure fell to a scant 0.3 percent of production, or 211 units, for the 1990 model year through Dec. 31, based on production of 70,483 Aerostars.

The Aerostar's "future as a van conversion application has to be questioned," Mittman said. The availability of the RV conversion package on Aerostar in the 1991 model year is uncertain. By the 1992 model year, the Aerostar's RV conversion package is even more likely to be dropped.

Mittman noted that Ford will be required to make a considerable investment in its vans to meet new safety standards, dealing with occupant injuries in frontal crashes, that take effect in 1992.

The full-sized van will be restyled from the ground up anyway, so Ford can engineer required safety changes into the vehicle as part of the redesign.

But with Aerostar, it would have to make changes in the RV conversion package, and those changes would be more difficult and expensive because of the vehicle's lighter weight, Mittman said.

Recreational Vehicle Wholesale Deliveries

Explorer scheduled to lead Ford truck push in Europe

By Francis J. Gawronski
AUTOMOTIVE NEWS STAFF REPORTER

LOUISVILLE, Ky. — Ford Motor Co.'s new Explorer sport-utility will be the vanguard of the automaker's efforts to penetrate the truck market in Europe, Philip E. Benton Jr., then Ford Automotive Group president, said at the vehicle's production startup.

Noting that Ford's business is shifting, Benton said the company may become more truck oriented, especially in Europe.

Benton, who became president and chief operating officer of Ford Motor Co. March 1, said Ford will export the new vehicle to Europe, where it hopes to create a demand for the light trucks it produces in the United States.

"We expect the European market to adopt the American idea that trucks are for carrying people as well as cargoes," he said. Trucks constitute one-third of the U.S. industry's new-vehicle sales each year and are 40 percent of Ford Division's North American volume.

That percentage is expected to increase because, as part of its strategy for the 1990s, Ford will build more and different kinds of trucks.

"We think that delightful phenomenon of truck ownership in North America will be exported to other countries," Benton said. "Our task is to decide how Ford can best translate its experience and success with pickups and minivans on this continent into other languages — so to speak."

Ford claims to be No. 1 in Europe in light commercial vehicles, with the Ford Transit. It also is solidly situated in the heavy-truck market there with Ford-Iveco.

"I can't tell you exactly how or when this truck expansion in Europe will take place," Benton said, "but I'm convinced that it will and that Ford, with world-class products such as the Explorer, will be a leader."

Benton said the 2- and 4-door Explorers, available in 2- or 4-wheel drive, provide an illustration of Ford's fitness for global cooperation and competition in the 1990s. They are equipped with a new 4-liter V-6 engine developed by Ford of Germany and a manual transmission supplied by Mazda of Japan.

Noting that sport-utility is the fastest-growing segment of the truck market, Benton said the Explorer will be fully competitive in that field.

Ford eventually hopes to sell 200,000 Explorers annually, about twice the sales of the Bronco II, which it replaces.

First-year Explorer production will be 100,000 to 120,000 units with the vast majority being 4-door models. The Louisville plant can produce 220,000 units annually.

Later this year, Ford will build 20,000 2-door 4x4 vehicles at the plant for Mazda to sell as the Navajo through its U.S. dealer network, marking the first time a U.S.-based vehicle maker will manufacture a product for a Japanese company.

4WD Rally
Pathfinder Equipment Co. of City of Industry, Calif., provides 4-wheel drive for GMC, Dodge, Ford and Chevrolet vans as a ship-through option.

RV BRIEFS

Chrysler vans add ABS

HIGHLAND PARK, Mich. — Chrysler Corp. will offer 4-wheel anti-lock brakes, supplied by Bendix Corp., as an option on all its 1991 minivans. The 4-wheel ABS is currently available only on Chrysler's Jeep Cherokee.

The minivans won't have rear ABS, as other light trucks and vans do, because of their front-wheel-drive configuration.

The 4-wheel ABS will be available on both 2-wheel-drive and the new 4-wheel-drive models, said Jack L. Warren, national marketing plans manager for Dodge trucks.

Chrysler does not plan to offer 4-wheel ABS on any other Dodge truck models.

Rockwood merges plants

ELKHART, Ind. — Rockwood Inc. has merged production of its Rockwood Van Division and sister company, Advantage Vans, into one manufacturing facility.

But the two sales organizations will remain separate.

The merger allows Rockwood and Advantage to streamline and upgrade manufacturing operations and product quality, according to Brett Dobrenz, Rockwood national sales manager.

Chevrolet to give promotional lift to its van converters

By Joseph Bohn
AUTOMOTIVE NEWS STAFF REPORTER

Chevrolet, through its dealer ad associations, plans to give a promotional lift to its van converters.

Chevrolet will begin test marketing a new ad support program in Chicago beginning in April, under which the local dealer group will promote van conversions.

The ads will be generic to avoid promoting some converters at the expense of others.

Chevrolet hopes to run the program nationally, once it has been tested and refined.

It will be funded by the 1 percent marketing charge Chevrolet adds to the invoice of new vehicles.

Overall, Chevrolet had a record 100,000 sales in van conversions in calendar 1989, picking up several percentage points of market share in the process, according to James C. Perkins, Chevrolet general manager.

Perkins was a keynote speaker at the Recreation Vehicle Industry Association's annual meeting in Phoenix last week.

He met separately with van converters and motor home manufacturers on March 2 to discuss issues only relevant to them.

Besides more ad support, Chevrolet's new consignment pool program also provides other benefits to converters, Perkins said.

Because it is now able to identify its van conversion buyers, Chevrolet has also been able to provide converters with better demographic profiles on their customers.

Perkins

With new federal regulations, such as Federal Vehicle Motor Safety Standards 204 and 208 coming up in 1991, General Motors plans to provide test data and design criteria for converters that will allow them to continue installing their own seats in van chassis, Perkins said.

Overall, he pointed out that the truck market is still very good, and that Chevrolet is holding to its projection of selling 1.4 million trucks in calendar 1990. That would give it 27.7 percent of the light/medium truck market.

Its sales of trucks for recreational vehicles and the RV lifestyle are an important component of that.

GM produced 40,565 P chassis last year for Chevrolet and GMC. Of the 35,306 produced for Chevrolet, 27,600 ended up being equipped by the RV industry as Class A motor homes, Perkins said. The balance were for commercial vehicle production.

There has been growing concern over lemon law legislation affecting motor homes.

Chevrolet, as the industry's chief chassis supplier, has been developing a new arbitration program that will help manufacturers resolve disputes more quickly.

The program isn't fully developed yet, Perkins added.

Right now, there aren't that many states that include motor homes in their lemon laws, but there's the fear that such legislation could catch on.

PERSONNEL

Toyota Motor Sales

Toyota Motor Sales U.S.A. Inc. has announced three managerial changes.

Nancy L. Fein has been named national service planning and operations manager. She had been warranty administration manager.

Her responsibilities now include supervising service market research, long-range planning, vendor relationships, warranty operations, dealership service capacity analysis and improvement and budget activities. Fein has been with the company seven years.

Fein

Swartz

Neil Swartz has been promoted to national service development manager. He was service development manager and has been with Toyota five years.

Thomas E. Lee has joined the company as Southeast regional public affairs manager. He was automotive publications manager for the American Automobile Association's national headquarters in Falls Church, Va.

Mitsubishi

John Zorger, corporate controller for Mitsubishi Motor Sales of America Inc., has been named a vice president of the company.

He joined Mitsubishi Motor Sales in 1982 when it began operations in the United States. He has been corporate controller since 1984.

Mack Trucks

Robert D. Brown has been named vice president of purchasing for Mack Trucks Inc.

He joins the company after 30 years with Rockwell International Corp. Most recently, he was vice president of procurement and business development for Rockwell Automotive.

Brown

At Mack, Brown will report to **Don DeFosset**, executive vice president of operations.

General Motors

Jay C. Wilber has been named executive director of the quality network for General Motors. He had been director of human resources management for the Automotive Components Group since 1988 and succeeds **Robert E. Boruff**.

Wilber

Boruff has been named business team leader of vehicle systems operations for Saturn Corp. in Spring Hill, Tenn.

Wilber joined Chevrolet in 1965 and moved into labor relations in 1972. He was transferred to the GM industrial relations staff in 1978, became industrial relations director for the Buick-Oldsmobile-Cadillac Group in 1984 and labor relations director for GM of Canada in 1985.

Laforza Automobiles

Fred Blum has been named senior vice president and chief operating officer for Laforza Automobiles, a manufacturer of luxury 4-wheel-drive vehicles. He was vice president of business development.

Pete Evanow has joined the company as director of market planning. He was managing director of Sports Impact, a sports marketing and research company.

Young & Rubicam Detroit

Young & Rubicam Detroit has promoted **Warren Winstanley** to group management supervisor of the agency's three automotive account groups — Lincoln, Mercury large cars and Mercury small/sporty cars. He was management supervisor.

Winstanley

Timothy Cooney has been named vice president, management supervisor for the Lincoln account. He was vice president and management supervisor for the Mercury account.

Tom Ryan has been named vice president and management supervisor for Mercury large cars. He was a management supervisor with the Lincoln-Mercury Dealers Association account.

Carol Canestraight has been promoted to vice president, management supervisor, Mercury small/sporty cars. She had been an account supervisor.

Lexus

Art Garner has been appointed public relations manager for Lexus Division of Toyota Motor Sales U.S.A. Inc.

Garner joined Toyota in 1980 and has served as news media relations manager, publications manager and product news manager. Most recently, he was community relations manager.

Diamond-Star Motors

Diamond-Star Motors Corp. has promoted two personnel representatives.

Tim Walker has been named manager of personnel administration, and **Robert Ponsonby** has been promoted to manager of employee relations.

Auto Tell Services

Charles E. Yocum has been promoted to vice president of sales and marketing, Northern area, for Auto Tell Services, which supplies automated management systems for auto dealerships. He was manager of the Northeast region.

Thomas M. Conner has been promoted to chief financial officer and vice president of finance. He will continue as treasurer.

Competitive Edge

David Woolcott has joined the advertising firm Competitive Edge in Albuquerque, N.M., as a broadcast producer and writer. He was president of Woolcott & Associates Ltd.

Competitive Edge handles advertising for GMC Truck dealer associations.

G&A Financial Services

Joyce Miller has been promoted to vice president of loan servicing for G&A Financial Services in Irvine, Calif. She was an assistant vice president.

General Tire

Robert F. Haimour has been appointed manager of central systems engineering/manufacturing for General Tire in Akron, Ohio. He was systems engineer for the company's Mount Vernon, Ill., facility.

Goodyear

Dan R. Starcher has been named Certified Auto Service manager for Goodyear Tire & Rubber Co. He was manager of service sales for the company's auto service centers.

SPX Corp.

Dale A. Johnson has been named president and chief executive officer for SPX Corp., maker of repair tools and diagnostic instruments. He was president and chief operating officer.

As chief executive, he succeeds **Robert D. Tuttle**, who continues as chairman.

Ziebart International

Lou F. Smith has been appointed vice president of product management and technical services for Ziebart International Corp. in Troy, Mich. He was director of product management and technical services.

Chrysler continues guaranteed rebates

By Arlena Sawyers
AUTOMOTIVE NEWS STAFF REPORTER

Chrysler Corp. extended and modified its retail Guaranteed Rebate Program last week, while Pontiac and Subaru of America Inc. adjusted their retail and/or dealer incentives.

All 1990 Chrysler, Plymouth, Dodge, Jeep and Eagle vehicles, except the minivans and Chrysler LeBaron convertible, are eligible for the guaranteed rebate until March 31. If the rebate on an eligible vehicle purchased or leased at retail is increased between March 1 and Sept. 30, Chrysler will pay the difference to the customer.

Changes in Chrysler customer rebates — guaranteed or otherwise — include a reduction to $750 from $1,000 on the 1990 Plymouth Laser, Eagle Talon and 1989 and 1990 Dodge Daytona base and ES models and an increase to $2,000 from $1,500 on 1989 Dodge Dakota pickups, excluding the "S" models.

The $1,000 rebate on the 1990 LeBaron convertible and the $50 test-drive payment ended Feb. 28.

Chrysler reduced its alternative finance rates. They are 2.9 percent for up to 24 months; 6.9 for 25 to 36 months; 7.9 for 37 to 48 months; or 9.9 for 49 to 60 months. The previous starting rate was 6.9.

Pontiac increased the retail rebate on its 1989 and 1990 LeMans to $1,000 from $750. Customer rebates on all other 1989 and 1990 Pontiac cars remain at $1,000 except Sunbird, which is $750.

The following Pontiac dealer incentives are in effect: 1989 LeMans and Grand Am, $500; 1989 Grand Prix, $1,000; and 1990 Grand Prix, $500. The 1989 Grand Prix payment will be reduced to $500 April 2 and remain at that level until the entire program expires May 2.

Subaru of America discontinued its retail incentive program and is directing all incentives to its dealers. Subaru dealers earn $400 on the 1990 Loyale; $500 on the 1989 and 1990 Justy (except ECVT); $1,200 on 1989 and 1990 Justy ECVT; and $1,500 on the 1989 XT and XT6.

The dealer rebate on the 1990 Legacy depends on the number of cars sold. The amounts are as follows: 6 to 10 sales, $500 per vehicle; 11 to 15 sales, $1,000 per vehicle; and 16 or more, $1,500 per vehicle.

Hungarian bus may get chassis by Mercedes

By Richard W. Bruner
STAFF CORRESPONDENT

GYOR, Hungary — Ikarus Body and Coach Building Works, a Hungarian bus manufacturer, is reported to be negotiating with Mercedes-Benz to use Mercedes-made bus chassis.

According to the official government news agency, a prototype chassis has been built.

The agency also reported that Daf Trucks, Renault Vehicules Industriels and "some unspecified American circles" want to establish a joint venture with Ikarus with an eye to getting a "foothold in the Soviet market."

In Budapest, meanwhile, about 1,500 laid-off Ikarus workers demonstrated in front of the Hungarian parliament building. The protesting workers demanded that the government promote a reorientation toward Western markets.

Ikarus had to lay off more than 10,000 workers Feb. 16 for up to seven weeks because the Hungarian government suspended its licenses to sell buses to the Soviet Union and other Eastern Bloc countries.

Hungary has a surplus of 250 million rubles. Government economists contend the surplus amounts to an open-ended interest-free loan to Eastern Bloc nations, especially the Soviet Union. Hungary has not yet signed the traditional annual trade agreements for 1990 with the Soviet Union, Poland and Bulgaria.

For now, Hungary does no business with other countries in Comecon, the Eastern Bloc trade group. Ikarus was supposed to ship 4,500 buses to the Soviet Union this year, but it has not been given permission to go ahead.

As a result, it has been unable to cover its debt of 1 billion forints ($15.7 million) to Csepel Automotive Works, which provides it with chassis and components. Csepel and other companies that ordinarily provide components to Ikarus have suspended deliveries until they are guaranteed payment.

Big 3 slate no downtime for March

By Karen Detkowski
SPECIAL CORRESPONDENT

The improving market is keeping U.S. car production at a steady level.

Chrysler Motors has deferred line-speed reductions at two facilities and plans to operate its four car assembly plants without interruption throughout March.

General Motors and Ford Motor Co. have not announced any downtime for March. Both companies have been scheduling overtime at some plants.

Automakers slated output of 130,675 cars last week, 5.37 percent below the prior week, which was the highest weekly output this year. Last week's build was 14.90 percent below the year-ago week.

Last year, the millionth car was built Feb. 16. As of March 3, this year's auto production was 897,243, 33.03 percent below 1989.

Companies split last week's estimated production as follows: GM, 42.76 percent; Ford, 24.71 percent; Chrysler, 11.56 percent; Honda of America Manufacturing Inc., 6.96 percent; Toyota Motor Manufacturing U.S.A. Inc., 3.37 percent; New United Motor Manufacturing Inc., 3.14 percent; Mazda Motor Manufacturing (USA) Corp., 3.05 percent; Diamond-Star Motors Corp., 2.20 percent; Nissan Motor Manufacturing Corp. U.S.A., 1.82 percent; and Subaru-Isuzu Automotive Inc., 0.43 percent.

Domestic truck production was estimated at 82,471 units last week, 0.30 percent above the previous week but 12.86 percent below the year-ago week.

Year-to-date, 599,113 trucks have been assembled, 26.90 percent below last year's build.

GM's Chevrolet Cavalier plant in Janesville, Wis., was scheduled for Friday overtime last week. The plant operates on a 4-day work week.

Chrysler's truck assembly facility in Warren, Mich., was slated to work Saturday overtime last week. The plant will work four of the five Saturdays in March.

Canadian cars reach '90 peak

Last week, Canadian automakers scheduled their highest weekly output of this year — 25,352 units, 6.34 percent above the prior week and 26.29 percent above the year-ago week when capacity was not as great.

So far this year, 155,602 cars have been produced, 12.80 percent below the year-ago total.

Chrysler's Bramalea, Ontario, plant is expected to resume output today after being idle five weeks.

Truckmakers estimated assembly of 20,274 units last week. That was 2.22 percent above the prior week, but 6.99 percent below the year-ago week.

Year-to-date, 146,679 trucks have been built, 21.29 percent below last year's total at this point.

GM's Oshawa, Ontario, truck plant was scheduled for Saturday overtime last week.

William Ford Jr.: "I would be crazy . . . not to have some lofty goals."

AUTOMOTIVE NEWS/JOE WILSEMS

BIG PICTURE: *William Ford Jr. will direct strategy for automotive group*

By Laura Clark
AUTOMOTIVE NEWS STAFF REPORTER

DEARBORN, Mich. — Ford Motor Co. last week gave 32-year-old William Clay Ford Jr. exactly what he wants — a chance to look at big-picture issues and make a strategic impact on the company his great-grandfather founded.

After eight months as manager of engineering and manufacturing at Ford Heavy Truck Operations, Ford was appointed director of business strategy for the Ford Automotive Group as part of a reorganization of the automaker's strategic planning functions.

He will report to Allan D. Gilmour, president of the Ford Automotive Group and fellow member of the board of directors.

Ford, son of former Vice Chairman William Clay Ford, still is out-ranked by his cousin, Edsel Ford II, 41, executive director of Ford's corporate marketing staff and son of former Ford Chairman Henry Ford II. But the move brings the younger cousin one step closer to Ford's inner circle, a step he has eyed for some time.

Ford knows his heritage won't be the only ticket to the top. He must prove himself a good decision maker and a good manager in every position he holds at the company, in which his family owns 40 percent of the voting stock.

"If I were to stay in this company, I would be crazy at this time not to have some lofty goals, but whether it's CEO or chairman I don't know. I'd like to get within shooting distance of it certainly," Ford said in an interview Feb. 16.

"If I do well, they are not going to make me executive vice president tomorrow. There is a certain time frame involved, but time is not the constraint — it's me and how well I do," he said.

The amiable young heir talks as excitedly about the future of Ford Motor Co. as about the new Jaguar XJ-S British Racing Green convertible he recently purchased or the improved record of his father's Detroit Lions professional football team.

Ford isn't shy about discussing his condensed tour of the company through his many assignments.

Since he joined the company in 1979 as a product planning analyst, he has been a sales zone manager, labor negotiator, marketing strategy analyst, advertising specialist, finance specialist, director of commercial vehicle marketing for Ford of Europe and managing director of Ford of Switzerland as well as manager of engineering and manufacturing at Ford Heavy Truck Operations.

Ford admits he has had no training in engineering and knew little about Ford's Truck Operations be-

VW due to reveal pact to build cars in East Germany

By Richard Johnson
AUTOMOTIVE NEWS STAFF REPORTER

GENEVA — Volkswagen AG is expected to announce today that it has reached an agreement with East German automaker VEB IFA Kombinant to produce a VW car in East Germany.

An announcement was expected at the Leipzig, East Germany, Trade Fair. Insiders say the deal was reached during last week's Geneva International Auto Show and could include production of the VW Polo supermini model.

In addition, sources said VW and Audi AG engineers have completed a preliminary review of East German suppliers. The West German automaker could announce plans this week for further contacts with more than 100 component operations that could supply Volkswagen-Audi in the West.

VW and Audi are also expected to announce plans in Leipzig this week for setting up an East German dealer network.

VW and Kombinant earlier this year formed a joint venture to develop and produce vehicles in East Germany.

As indicated by the VW developments, the crackling pace of events in Europe's auto industry dominated the year's first European show. East-West talks have reached the frenetic stage, and automakers are scrambling to assess market potential, assemble dealer networks and even enter whole new car-size segments to satisfy anticipated demand.

Geneva was also a forum for the increasingly combative debate over Japanese penetration in post-1992 Europe. It also reflected Europe's rush to environmentalism with ideas like electric cars.

General Motors' aggressiveness in Eastern Europe became apparent. GM recently announced a car and engine production deal in

CENSUS

Dealer total dips to 24,576; domestics, imports off 337

By John K. Teahen Jr.
SENIOR EDITOR

In a year of declining sales and scant or non-existent profits, the number of new-car dealerships in the United States dropped by 337.

The annual *Automotive News* census found 24,576 outlets on Jan. 1 of this year, compared to a revised total of 24,913 at the beginning of 1989. It was the biggest dip since the recession year of 1982.

The Big 3 lost 214 dealerships last year, and there was a slip of 123 in the number of stores selling only imported cars.

On Jan. 1, the dealership population consisted of 19,379 establishments handling Big 3 autos and 5,197 stocking only imports. About 90 percent of the Big 3 locations also carry an import, either a cap-

Team concept, job security fuel strike talk at GM plant

By Kathy Jackson
AUTOMOTIVE NEWS STAFF REPORTER

Lynn Monhollen thinks the UAW may strike General Motors this year.

Monhollen, a 15-year veteran who works on the engine line at the Detroit-Hamtramck assembly plant, is not alone. Monhollen and many of his co-workers believe the team concept is a failure, job security is nonexistent, and the union has relinquished too much power.

They say that with Steve Yokich at the helm — a man they say is much tougher than former UAW GM director Donald Ephlin — GM may be in for the fight of its life when negotiations begin in July.

"I think the possibility of a strike is great," said Monhollen, 35. "It may be time for something like that to happen."

Even Joyce Robbins, a model employee who was picked to represent Cadillac at the Los Angeles Auto Show in January because of

Buick returns to the basics on road to recovery

By Michelle Krebs
AUTOMOTIVE NEWS STAFF REPORTER

FLINT, Mich. — With two key cars yet to debut this year, Buick appears to be solidly on the road to recovery.

Buick's market share, with the exception of a slight dip in February, has edged higher each month since the start of the 1990 model year and, during a couple of 10-day sales periods, exceeded 6 percent, the division's goal for the model year.

The upward climb comes on the heels of market share holding steady for the past two calendar years. And it comes before the division has yet to put its bread-and-butter Regal sedan and new luxury Park Avenue into dealer showrooms.

The Regal sedan and the Regal sedan and coupe with the optional 3800 V-6 tune port injection engine, a Buick exclusive, went into production in recent weeks and will arrive in showrooms soon as 1991 models. The 1991 Park Avenue goes into production at the end of March and will be introduced in early July. Reatta convertibles are being delivered now to showrooms in warm climates.

Still, Buick is a far cry from where it once was, and where it wants to be in the next five years.

Buick remains far from its high point of the 1980s, when it owned 9.23 percent of the car market in 1983. It hit its low point in 1987, capturing only 5.39 percent of the car market.

"We want to be somewhere around 6 percent by the end of the 1990 model year," said Buick General Manager Edward Mertz. "I think that's achievable. We think we can get that with the new products and the quality that we're producing."

Buick's Roadmaster debuts in 1992.

HIDDEN IMAGE/HANS G. LEHMANN

Within five years, Buick wants to take 8 percent of the car market, Mertz said. By then, its entire product line will be consistent with its recently adopted image of the American road car.

In 1992 Buick will introduce the Roadmaster, which it believes is a modern-day version of a classic American road car. The Roadmaster, which also was the name of a classic Buick of the 1950s, will be based on the rear-wheel-drive B-body, upon which the 1991 Chevrolet Caprice is built.

Mertz said Buick is focused on

Lexus, Infiniti affect luxury market, but trail sales targets

By Arlena Sawyers
AUTOMOTIVE NEWS STAFF REPORTER

Luxury car upstarts Lexus and Infiniti already have carved a niche in the hearts of their dealers and the pocketbooks of buyers in their few months on the market.

But Lexus is falling short of even its revised sales goal, and Infiniti is short of its apparent goal based on production targets for the United States.

In February, Lexus sold 4,171 cars, giving it 5.29 percent of the target market, while Infiniti sold 1,075, giving it 1.36 percent.

Lexus reported its August sales with September's, which gave it an inflated 5.36 percent of the target market. Likewise, Infiniti went on sale in November, but it reported those sales with December deliveries, for an inflated 2.34 percent of the December target market.

Since the Japanese entries arrived, market shares of many luxury cars have slipped. Audi, Acura, Cadillac, Mercedes, Saab and Volvo have lost market share. BMW, Jaguar, Porsche and Sterling have held their own.

Lincoln made the most dramatic gain — from 16.39 percent in September to 25.80 percent in February. Lincoln's increase was due largely to a better supply of Town Cars. The 1990 model was introduced in September but was in short supply for several weeks because of component shortages.

J. Davis Illingworth, Lexus vice president and general manager, said 60 percent of Lexus buyers trade in European and domestic makes, 30 percent trade in Japanese-badged cars and 10 percent offer no trade-in at all.

Liz Finnegan, an Infiniti spokeswoman, said many of its trade-ins have been Mercedes-Benz, Jaguar and BMW models.

"We're getting more than originally expected and with relatively low mileage," she said.

Lexus expects to sell 40,000 LS400 and 20,000 ES250 models in 1990. Slugglish sales of the ES250 prompted Toyota Motor Sales U.S.A. to reduce its 1990 sales goal to 60,000 from 70,000. At the current rate of travel — 24,608 in seven months — first-year sales would be about 42,100.

Infiniti has not announced sales goals, but officials have indicated that United States-bound M30 and Q45 output would be about 32,000 units per year. Its 4-month, winter-season rate of travel — 3,869 units since November — would be 11,600 first-year sales.

Cadillac, still the leading seller of luxury cars in the United States, saw it's share of the target market skid from 32.69 percent in September to 26.38 percent in February. Cadillac sales went down only 2,000 units during the period.

Acura, whose owners were targeted as hot prospects by Lexus, slipped to 12.72 percent of the target market in February, down from 14.14 percent in September.

Lexus and Infiniti dealers said they are pleased with sales.

Steve Zamawa, general sales manager at Culiver Infiniti in Phoenix, said his store sold 45 M30s and Q45s in February, making it the No. 1 store last month.

Will Mitsubishi, Daimler ties lead to vehicle ventures?

By Mary Ann Maskery
AUTOMOTIVE NEWS STAFF REPORTER

TOKYO — While talks between the Mitsubishi Group and Daimler-Benz AG offer huge possibilities in aerospace and electronics, the two firms also could be on the verge of closer ties in automotive ventures. The question is, When?

The two industrial giants revealed last week they are exploring a range of technological and commercial ventures. The talks were said to be in their early stages, and there were no guarantees that they would lead to an alliance.

Yet according to analyst Koji Endo with Nomura Securities, joint automotive production and research and development projects are now "inevitable."

The two companies have had little success in putting previous automotive plans into place.

With that in mind, analyst Stephen Usher, of Kleinwort Benson International, said, "It will be a long time before any agreement is reached." Still, last week's "agreement to agree" does make the environment more receptive to some kind of progress, Usher said.

Daimler-Benz initiated the latest talks, according to Mitsubishi. Analysts see the move as an effort by the West German conglomerate toward further diversification, particularly in aerospace and electronics. Both are fields where the Mitsubishi Group has particular strength.

But if Daimler-Benz has something to gain in those areas, its Japanese counterpart can benefit in the automotive area. Automotive dominates Daimler-Benz's business, but Mitsubishi Motors Corp. is a somewhat minor figure in the Mitsubishi Group.

Endo believes a closer tie-up would benefit Mitsubishi Motors more than Mercedes-Benz AG, Daimler's automotive unit.

Mercedes is unlikely to venture into small cars, he said. But Mitsubishi is trying to extend its lineup toward the luxury end of the market and could benefit from Mercedes technology.

Mitsubishi is also still looking for a production partner in Europe.

The auto ties between the two companies go back to 1987, when they reached a 3-point agreement on joint marketing and production. Today, only one of those is in place.

The 1987 agreement included a feasibility study on producing Mitsubishi commercial vehicles at a Mercedes plant in Europe. But Mercedes pulled back, reportedly because its plants were already at full capacity.

There was also a plan to study joint development of a light commercial vehicle. But there's been little progress beyond an exchange of engineering visits.

Mitsubishi Motors has set up outlets to sell Mercedes cars and trucks in Japan. That agreement apparently led Mitsubishi Motors to later turn aside a similar proposal to sell Chrysler cars. But the Mercedes project has been slow getting started and not altogether successful.

The truck arrangement was established in the fall of 1989, and so far has received only about 20 orders.

As for passenger cars, acquiring dealerships has been an expensive and pain-staking process. Of the 31,511 Mercedes cars sold in Japan last year, only 500 were sold through Mitsubishi-related outlets. Although Mercedes' intent was to set up an independent channel with Mitsubishi Motors' help, Yanase & Co., the largest importer in Japan, still handled most of the sales in 1989.

The larger implications in the Daimler-Mitsubishi tieup have set off ripples of concern over a major international effort that would challenge U.S. supremacy in aerospace. What is more, it would be a link between two corporations that were heavily involved in arming the Axis military efforts of World War II, raising questions about defense-related projects.

Smart cars, highways in Bush transport plan

By Diana T. Kuryiko
AUTOMOTIVE NEWS STAFF REPORTER

WASHINGTON — The Bush administration set the tone for further regulation of auto safety and fuel efficiency in releasing its long-awaited transportation policy last week.

The 129-page document, titled "Moving America Into the 21st Century," sets 65 legislative goals.

It will also guide the reauthorization of highway, mass transit and highway safety programs, said Transportation Secretary Samuel K. Skinner.

Skinner

But the major news to the auto industry is a $12 million commitment to fund research and development of so-called smart cars and smart highways, said Wallace D. Burnett, special assistant for strategic planning at the Department of Transportation.

Intelligent vehicles and highways are being touted as ways to unclog roadways, increase highway capacity and improve highway safety. The plan foresees the technology being used to automate traffic control systems and provide information to drivers.

Skinner said the pursuit of those new technologies will reflect "a major investment" backed by the industry's continued interest. He said several projects are already under way, including the Pathfinder project in Los Angeles where sensors on Oldsmobile Delta 88s advise commuters of congestion and road conditions.

In addition, the DOT plans to develop an advanced driver simulator to evaluate various highway and vehicle systems.

In the safety area, the plan calls for rules requiring increased occupant-protection and vehicle crash-avoidance systems andstepped-up defect monitoring and recalls.

The DOT also said it will work with the Department of Energy to focus on "fuel-efficient transportation alternatives," including increased use of alternative fuels and alternative-fueled vehicles.

While the plan holds true to President Bush's promise not to raise taxes, it proposes shifting costs to users. In lieu of an increase in the federal gasoline tax, Skinner urged states to raise toll fees and state gasoline taxes to generate revenue for highway projects.

He also called for increased taxes at airports to expand overcrowded facilities.

The plan also advocates:

- Continued deregulation of the trucking industry and promotion of uniform state registration and tax reporting requirements.
- Study of new technologies, including high-speed passenger rail service, hypersonic planes, tilt-rotor aircraft, magnetically levitated trains and global positioning systems for navigation.

Sen. Brock Adams, D-Wash., a former transportation secretary, accused the administration of watering down earlier policy. He criticized the plan for proposing increases in user fees. If states are to carry a bigger load, "Why have a DOT at all?" he asked.

Car stockpile holds steady; supply declines to 67 days

By Michelle Krebs
AUTOMOTIVE NEWS STAFF REPORTER

DETROIT — Automakers and dealers continue to keep car inventories in check despite the approach of the spring-selling season.

Automakers entered March with about 3,000 fewer unsold cars than they had at the start of February. March opened with a stockpile of 2,111,436 units, down 15.95 percent from year-ago levels.

On March 1, automakers had a 67-day supply of cars, down from 73 days on Feb. 1 and the bloated 90-day supply they held at the beginning of this year.

A 60- to 70-day supply is considered ideal, though it usually is higher going into the spring-selling season, when dealers and manufacturers traditionally have stocked more cars for warm-weather impulse buyers.

Import stockpiles, which totaled 644,857 cars on March 1, dipped about 6,000 from Feb. 1 and were well below the 720,056 on hand a year ago. Days' supplies were 80 this month, 81 a month ago and 87 a year ago.

Domestic automakers had 1,466,579 unsold cars in inventory on March 1 for a 66-day supply. That was down from a 70-day supply in February and a 78-day supply on March 1, 1989. The latest inventory was up about 3,000 units from Feb. 1, but was 18.16 percent below the year-ago total of 1,791,970.

Massive production cutbacks in January by domestic manufacturers spilled into early February to keep inventory levels down, despite a sales drop during February.

General Motors pared its inventory to a 70-day supply from the 75-day supply it had on Feb 1. Ford trimmed its stockpiles to a 65-day supply from 73 days a month earlier. And Chrysler Corp.'s inventory dropped to 73 days from last month's 79 days.

Dealers continue to stock leaner supplies of new cars than they did a year ago as they attempt to slash floorplan costs.

They remain cautious about how strong the usually brisk spring-selling season will be.

Former owner wants to buy ailing California megadeal

CLAREMONT, Calif. — Jack Head, the former owner of Claremont Auto Park, is among those trying to purchase the dealership, which is in receivership.

Meanwhile, the court-appointed receiver, Attorney David Ray, is grappling with a number of problems connected with the ailing auto center. Discrepancies range from missing and damaged vehicles to improperly handled trade-ins to a slew of unpaid creditors.

Claremont Auto Park, a 7-franchise dealership located about 40 miles east of Los Angeles, was placed in court-appointed receivership in February. The move was made at the request of the principal creditor, General Electric Capital Corp., which reportedly was unsatisfied with park operation.

"A receivership, by its nature, is an insolvency proceeding," said Sarah Graber, counsel for General Electric Capital in Chicago. "However, it is not GECC's policy to discuss matters in litigation."

"I want to make this place a legitimate auto park," said Head. "The receivers are taking bids not only from me, but a lot of other people they think might be good prospects."

Joe Wilson, a Chicago businessman, acquired Head's franchises in February 1989, including Cadillac, GMC, Acura, Pontiac, Hyundai, Sterling and Isuzu. Wilson purchased the park reportedly for $21 million, which included the flooring and the separate purchase of Claremont Acura.

According to Head, General Electric Capital financed 80 percent of the purchase. Head carried the remaining 20 percent. Head also owns the property and buildings, which he said are valued at $25 million.

Sources within the Claremont Auto Park say General Electric Capital mandated that Wilson maintain a specific profit margin on a month-to-month basis. Allegedly, he had been unable to perform to satisfaction. Consequently, General Electric Capital sought and was granted the receivership in early February of this year. Wilson was unavailable for comment.

Ray confirmed that a half dozen demo cars had been damaged while being driven by employees at the auto park, although he said he was unsure of the extent of the damage. He also acknowledged that a number of cars are unaccounted for. Independent sources say the number is between 20 and 40. "Somebody has them that is not supposed to have them," said Ray.

In several cases, Claremont Auto Park took in trade-in vehicles with unpaid balances, with the agreement that it would fulfill the debts. Owners later found the dealership had failed to do so. Ray said that, where possible, he was arranging payoffs.

Maryland court says state resident can sue car dealership in Virginia

By Helen Kahn
SENIOR CORRESPONDENT

In a case that could have implications for dealers near state borders nationwide, Maryland's highest court has ruled that a Maryland consumer can sue a Virginia car dealer under a Virginia consumer protection law.

In 1988, Maryland resident Bert W. Rein, relied on a *Washington Post* advertisement in buying a car from Koons Ford in Falls Church, Va. Koons advertised specific cash prices, except for tags, taxes and freight. But when Rein found that Koons charged a "document preparation fee" of $99.90 for each car sold, he alleged that Koons had changed the advertised price.

In his suit, Rein charged deception under the Virginia consumer protection statute.

Maryland's lowest court dismissed Rein's complaint on grounds that the Virginia law was not enforceable in Maryland. But Maryland's court of appeals, its highest court, said it is.

The decision paves the way for Reins to bring a class-action suit under Maryland law. He has started to assemble other Maryland buyers caught in the same circumstance over the last three years.

Rein is seeking $100 for each such consumer — the minimum allowed under Virginia's consumer protection law. But the class suit must aggregate $2,500 to be certified under Maryland law.

In a separate but related development, the Virginia Legislature has passed a bill to require disclosure of any such document "processing" or "paperwork" fee.

The action stems from a bill introduced by state Sen. Joseph V. Gartlan, who was outraged when a dealer presented a form calling for a $250 processing fee after he thought he had made his deal. Gartlan gave in to the dealer because he wanted his new car but made up his mind to get even.

The Gartlan bill requires the dealer to put any such fee on the standard order form which is submitted to the state commissioner of motor vehicles and which is used in negotiating price with the customer. In addition, the dealer must post a sign in the showroom informing customers of the fee.

The Virginia Automobile Dealers Association said most Virginia dealers charge such a fee but it usually is for less — between $20 and $125.

SERVICE MANAGEMENT

Import buying spree for Japan

By Mary Ann Maskery
AUTOMOTIVE NEWS STAFF REPORTER

TOKYO — All 11 Japanese car and truck manufacturers have responded to the wishes of the Ministry of International Trade and Industry by announcing import plans worth a total of 1.03 trillion yen ($7.4 billion). A large but unspecified percentage of that total will include parts and components from U.S. suppliers.

The plans, targeted for 1992, are long on numbers for obvious political effect. The import campaign is an effort to ease trade friction.

In fact, the push for imports seems to be attracting more attention than efforts to increase local content overseas, according to American representatives of the parts industry in Japan.

But all the new announcements on imports are short on detail.

Some plans call for reverse imports of built-up vehicles from transplants in the United States. Other items include helicopters, super computers and integrated circuits.

But for most of the companies, automotive parts will account for at least 50 percent of the total.

John Creamer, director of the Tokyo office of the Motor and Equipment Manufacturers Association, said it is not clear how the plans will affect U.S. suppliers. There are a few specifics on built-up vehicles, but the rest of the plans are nebulous, he said.

The programs may be helpful, Creamer said, but so far there is no case of an American supplier writing a million orders because of the recent announcements.

And when the companies do start putting specifics next to the figures, many of the imports may not come from the United States at all but from Europe and Asia.

Ikuichi Kurita, general manager for corporate communications at Mazda Motor Corp., said the company will import 115 billion yen (U.S. $793 million) in parts and materials by 1992, but has not yet made specific plans for each country.

It is the company's policy not to specify country or company, he said. He added, considering U.S.-Japan trade relations, "We might be persuaded to import more from the U.S."

American suppliers were increasing business in Japan even before the fanfare of the recent announcements, Creamer said. Political pressure has helped.

The U.S. Commerce Department has made auto parts a priority in the Market Oriented Sector Specific talks with Japan. But business is better also because American suppliers are becoming better known and more adept at doing business in Japan, Creamer said. In addition, they often offer a price advantage.

General Motors' Automotive Components Group did $134.9 million in business in Japan last year, an increase of 35 percent, and expects to nearly triple that in five years. Much of last year's business was with Isuzu Motors Ltd., a GM affiliate, but the group also did business with seven other manufacturers.

Some of the increase in sales has been a direct result of the political pressure, according to GM representatives. James Trask, director of planning for GM Overseas Corp. in Japan, said the pressure has often led Japanese firms to take the first step. "We have a good product," he said. "If pressure makes one more guy look at the product, it helps."

But Ben Lipscy, regional sales manager for Delco Electronics, said the weakening of the dollar has had more effect on business than government pressure.

Other factors also affect business. Selling is very labor intensive, according to Daniel Kinnavy, sales manager for Packard International. The sales volume often corresponds to the size of the staff.

There is also the long period required for transportation and the need to warehouse products in order to fit into Japan's just-in-time system. The Japanese buyers have been supplying the warehouse space. That can add 10 to 15 percent to costs, Lipscy said.

Eventually, Delco may have to develop its own warehouse, he said, but will need volume first.

Delco started doing business with Toyota Motor Co. this year with a pressure sensor modified to Toyota specifications. "Someone who sells to Toyota has to want to sell to Toyota," Lipscy said. "It is a large company that insists you do business its way."

But, he added, there is a great potential for volume.

Thirty American firms now have representatives in Japan. Having a setup in Japan is a critical issue for doing business, according to Philip Austin, regional manager for AC Rochester.

Most of the suppliers are still not included in the early design stage, a key issue for the parts industry. Much of the business in the past has involved readily installed components, Creamer said. Internal engine components might be more difficult, he said.

Mazda has been importing tires, windshields, lamps and, more recently, anti-lock brakes and air bags, Kurita said. With the increase in imports, Mazda will add engine, transmission, suspension, electronic and brake parts to the list.

Transportation and warehousing costs have to be considered, Kurita said, so the company must take a step-by-step approach to imports.

Toyota is planning a 300 billion yen (U.S. $2.06 billion) import program by 1992. Parts will account for about 200 billion yen of that, according to Vice Chairman Tsutomu Ohshima.

MEMA schedules conference on boosting trade with Japan

ENGLEWOOD CLIFFS, N.J. — The Motor and Equipment Manufacturers Association will sponsor an executive-level conference April 4-6 in Las Vegas, in an effort to increase business between United States parts makers and Japanese motor-vehicle manufacturers.

Cosponsored by the Japan Automobile Manufacturers Association, the conference will be held during the International Automotive Aftermarket Show.

According to MEMA, the business development conference will be focused around a series of prescheduled, individual company-to-company meetings between executives of leading U.S. parts manufacturers and teams of top purchasing executives from the Japanese vehicle manufacturers.

The conference also will feature sessions with leading industry speakers and specialists, as well as social events designed to foster the development of closer personal and business relationships between U.S. suppliers and Japanese manufacturers, according to MEMA.

MEMA President William A. Raftery said, "The conference offers unequaled opportunities for qualified U.S. original equipment manufacturers to build or expand solid business relationships with all Japanese vehicle producers through senior executive-to-executive contacts."

To promote effective interaction among participating executives, the associations will limit participation to a select number of American suppliers.

Dealer service improving, Canadian survey discloses

By Alex Law
STAFF CORRESPONDENT

OTTAWA, Ontario — Dealer automotive service is getting better, according to a survey of nearly 22,000 members of the Canadian Automobile Association.

Some 56.2 percent of respondents to a questionnaire said they were very satisfied with the service they received from their dealer. That was up from 50.4 percent in the previous survey.

The domestic manufacturers made the biggest jump in the "very satisfied" category, up from 44.0 percent last year to 50.1 this year. The European companies rose from 58.4 percent to 64.3 percent, and the Asian manufacturers climbed from 61.3 percent to 65 percent.

The degree of "satisfaction by manufacturer" was 73 percent, almost unchanged from last year's 72 percent. Satisfaction with European makes went up to 78.2 percent from 75.8 percent; Asian makes, to 82.9 from 82.3; and domestic makes. to 67.7 from 67.1.

Asked what features they want in a new car, respondents included two new items in the top 12 this year — anti-lock brakes and air bags — but left the rest of the list in the same order as last year.

The list is: power steering and brakes, power windows, power door locks, air conditioning, automatic transmission, cruise control, ABS (replacing a sunroof), AM/FM radio with cassette, power seats, tilt steering wheel, air bags (replacing a heavy-duty suspension) and delayed wipers.

Parts cabinets save space, reduce cost of new dealership

By Francis J. Gawronski
AUTOMOTIVE NEWS STAFF REPORTER

HAMPTON, Va. — Mark Tysinger offset a potential $1 million cost overrun in the construction of his new 42,000-square-foot dealership by redesigning the parts department to accommodate high-density storage cabinets before the facility was completed.

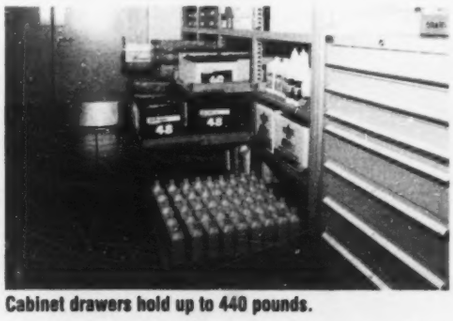
In the initial stages of planning the new home of Tysinger Mercedes-Benz & Dodge, Tysinger collaborated with representatives of the Mercedes-Benz facilities and planning department to determine the dealership's special needs.

Original plans called for a 12,000-square-foot parts department. The space was the recommended requirement for the dealership's projected $2.5 million annual parts sales volume.

Tysinger said a review of the building plans, triggered by the potential overrun, revealed that more than half the space in the parts department was for storage.

Tysinger began a search for a flexible, more efficient storage setup that would require less space while providing enough storage capacity for the projected parts volume.

Tysinger discovered that dealerships using high-density storage cabinets rather than shelving were able to save space. In his situation, the cabinets would enable the parts to be stored in less than 50 percent of the space he had originally allotted.



Cabinet drawers hold up to 440 pounds.

To solve his storage dilemma, Tysinger turned to Lista International in Holliston, Mass., which designed a flexible storage system that reduced the dealership's parts department space requirements from the original 12,000 square feet to 6,000 square feet.

The storage plan maximized the usefulness of the space with high-density modual storage equipment. The company also turned space beneath the department's service counter into primary storage area for fast-moving parts. Now, 70 percent of fast-moving parts are kept in that general counter area, which has reduced retrieval time.

The company designed and manufactured heavy-duty modular storage cabinets that can hold up to 440 pounds per drawer.

It also installed a storage wall that has adjustable shelves to hold bulky items, roll-out trays for easy retrieval of heavy parts and drawers of various heights to hold components ranging from small parts to heavy tools. Drawer partitions and dividers create a variety of small and large compartments, while label holders allow easy identification of components.

Shop volume opens year with big rise

By Francis J. Gawronski
AUTOMOTIVE NEWS STAFF REPORTER

Service and parts business in new-car dealerships across the country opened the new year with a bang.

With four of the five indicators in the Automotive News Service Index registering impressive gains, shop volume in January amounted to 112.3 percent of the business recorded in January 1989. In December, shop volume was 96.3 percent of the volume in the same month the year before.

Many dealers attributed January's increase in service and parts volume to the adverse weather in their areas, while others said that because of economic conditions, customers were having major repairs made to their vehicles rather than purchasing new ones. Others said credit advertising and promotions increased business.

The leading indicator in January was gross profit on all labor, parts and accessory sales — the most important indicator from a dealer's viewpoint — up 12.0 percent.

Sales of all parts and accessories, those used in the shop plus counter and wholesale sales, were up 11.7 percent over the year-earlier volume, while both total labor sales and shop parts sales (those used in dealer shops on both customer-paid and warranty work) recorded an increase of 7.8 percent in January.

Repair orders written were off 0.6 percent from the volume registered in the same month in 1989.

Figures used in the Service Index are compiled from monthly reports on service and parts business from a cross-section of the nation's new-car dealerships.

SERVICE INDEX
112.3★

	Jan., '90 vs. Jan., '89
Gross Profit on All Labor and P&A Sales	+12.0%
Repair Orders Written	−0.6%
Total Labor Sales (Customer & Warranty)	+7.8%
Shop Parts Sales (Customer & Warranty)	+7.8%
Sales of All P&A	+11.7%

★ Survey by Automotive News shows that dealers' service and parts business in January 1990 was 112.3 percent of business in January 1989.

BEST JANUARY IN OVER 6 YEARS!
and we've been in business over 50 Years

February 10, 1990

TO WHOM IT MAY CONCERN:

HAVING PROBLEMS? SALES NOT WHAT YOU THINK THEY SHOULD BE? PROFITS FALLING? These were just some of the problems I was facing in late 1989 so I took the chance and called Dave Holder of "Consultants Advertising Retail Sales, Inc."

C.A.R.S. was very responsive to my problems and provided me with the necessary references to contact. They all informed me that they were very happy with the results of the C.A.R.S. program. Dave came by my dealership and we discussed the program in depth after which I decided to make the commitment.

THIS HAS TURNED OUT TO BE ONE OF THE BEST THINGS I HAVE EVER DONE. C.A.R.S. sent me their in-house representative, Jim Carter. We walked through the store, looked over the inventory, sat down and looked over the financial statement. From that point on we started doing things the C.A.R.S. way.

Every department in the store is different than it was. All of my valued employees not only stayed with me and accepted the changes made, but have improved themselves, both in attitude and income. Everyone is now working as a team toward a common goal, to make "BABIN MOTORS" the best place to work and the best place to buy a vehicle.

We just came off the BEST JANUARY IN OVER 6 YEARS and we've been in business 50 years. Our bottom line in January 1990 was greater than 1989 total. Our service department enjoyed the best month ever in our 50 year history, our sales increased by 26 units from a year ago. GROSSES WERE UP BY OVER 100 PERCENT.

WE ARE SELLING ALMOST 4 OF EVERY 10 PEOPLE WHO COME IN THE DEALERSHIP. Our advertising dollars are now spent with purpose and accountability. To say I'm pleased doesn't quite cover it. If you're having some or all of the problems I experienced call C.A.R.S. now! It might very well be the best move you'll ever make. Feel free to call me about my C.A.R.S. EXPERIENCE.

AROUND THE WORLD

Multi-valve engines for BMW 5

By Richard Johnson
AUTOMOTIVE NEWS STAFF REPORTER

LANDSHUT, West Germany — BMW AG is preparing to introduce all-new 24-valve versions of the 520i and 525i in Germany this spring. The larger of the two models will be offered in the United States next fall.

Except for special BMW Motorsport GmbH performance models, BMW until recently has shunned 4-valve technology in its mainstream lineup.

After introducing the U.S.-bound 16-valve 318is at the Frankfurt show last September, BMW is now following with 4-valve heads on its 2- and 2.5-liter 6-cylinder engines in the 5 series, which in the United States starts with the 525i.

The 4-valve head is the same as that used in the 4-cylinder 318is. The 24-valve in-line six-cylinder units are expected to turn up next on 320i and 325i versions of the new-generation 3 series that will debut at next January's Amsterdam, Netherlands, auto show, sources say.

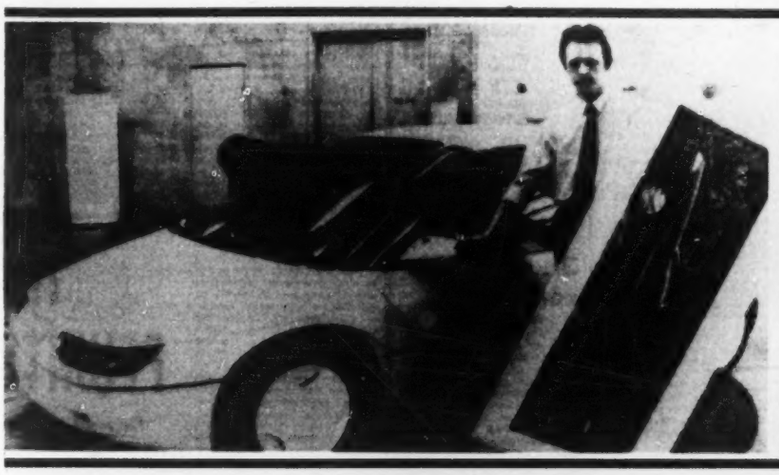
The new engines are expected to get 80 percent of BMW 5-series production. BMW will drop the 188-horsepower 530i from its lineup here because performance is so close to the new 525i. The 730i will continue to be offered.

BMW has no plans for a similar version of the 535i. It is widely assumed here that the 535i is not getting 4-valve technology because the company is preparing a V-8 engine to slot between its biggest in-line sixes and the 5-liter V-12.

Still, Gerhard Schmidt, chief of engine design, said there is "no real technical demand" for a V-8. Other BMW insiders acknowledge that the company has built such an engine, but insist no decision has been made to put it in production.

According to European reports, a 3-liter V-8 will be used in an 830i version of the V-12 850i coupe that goes on sale this spring.

BMW engineers here said the company also does not plan to equip its 5-liter engine with 4-valve cylinder heads, since top speeds for the 750i and 850i are already restricted.



Aleko II
The Feb. 4 edition of the Soviet Communist Party's *Pravda* newspaper previewed the successor to the Moskvich (Aleko), which goes into production in 1993. Aleko II will be the first all-new model from Moscow's AZLK factory in nearly 10 years.

Car sales rise again in Europe; predictions of downturn continue

By Richard Johnson
AUTOMOTIVE NEWS STAFF REPORTER

FRANKFURT, West Germany — New-car sales in Western Europe, which set a record last year despite widespread forecasts of a downturn, continued their climb in the first month of 1990.

Sales in January rose 2.6 percent to 1,267,600 in 17 Western European nations, according to industry estimates. Volume declined in Italy and the United Kingdom in comparison with strong January 1989 results in those countries. But sales rose in France and West Germany.

Most industry executives and analysts still expect at least a slight downturn from last year's record 13.4 million new-car market in Europe, citing rising interest rates in several countries. But the decline is more than two years overdue, and the market has continued to show steady, if unspectacular, growth.

Italy, which ranked second among European countries in 1989, was tops in January with sales of 264,000 cars. Nevertheless, Italian sales were 5.2 percent lower than in January 1989. Sales also declined 6.3 percent to 206,400 in the United Kingdom, Europe's third largest market last year.

Sales in West Germany, the biggest market for several years, rose to 207,500, up 10.5 percent over January 1989.

January sales in France climbed 16.8 percent to 235,800. Figures reflect an estimated 60,000 cars sold in December, but not registered due to a civil servants strike.

On the strength of January's large Italian market, Fiat Auto, including Lancia and Alfa Romeo, was tops among manufacturers with volume of 203,600 — 10 percent below the previous January — and a 16.1 percent share of the Western European car market.

Volkswagen, Europe's annual sales leader for the past four years, was next at 175,100 units, a 9.3 percent increase over last year and a 13.8 share for the month. The VW figures include Audi and Seat. Peugeot S.A. sales, including Peugeot and Citroen, totaled 174,100, a 13.7 percent share and nearly the same volume as a year ago.

NEW-CAR SALES BY COUNTRY IN EUROPE

Country	January 1990	Pct. change vs. 1989
Italy	264,000	– 5.2

Bumpers graded 'poor' and 'lousy' in 5-mph crash tests of 16 cars

By Diana T. Kurylko
AUTOMOTIVE NEWS STAFF REPORTER

WASHINGTON — The bumper on the 1990 Honda Civic DX suffered the least damage in a series of 5 mph crash tests of 16 small 4-door cars. The Daihatsu Charade SE fared the worst, said the Insurance Institute for Highway Safety.

The insurance-funded study involved four separate crashes with each car. The front end of each car was run into a flat barrier head-on and at an angle. The rear end was run into a flat barrier and a pole.

The four crashes combined caused $3,838 in damage to the Charade and $769 to the Civic.

Brian O'Neill, institute president, said most cars performed badly. "The whole point of bumpers is to bump at low speeds without damage. But every bumper we tested this year did a poor job of preventing damage and some were downright lousy."

Bumper performance even varied within similar models. The Japan-made Toyota Corolla fared better than the U.S.-made Corolla and its twin, the Geo Prizm.

The study also concluded that the bumper on the 1990 Hyundai Excel was weaker than the 1989 model. The 1990 model sustained $721 in damage in the rear pole test, compared with $562 for the 1989 model.

DAMAGE REPAIR COSTS FOR 1990 MODELS

Make/Model	Front into barrier	Rear into barrier	Front into angle barrier	Rear into pole	Total damage in all tests
Daihatsu Charade SE	478	1,508	480	1,372	$3,838
Volkswagen Jetta GL	247	383	916	1,130	$2,656
Volkswagen Golf GL	179	298	761	1,013	$2,251
Volkswagen Fox GL	141	433	423	993	$1,990
Mazda 323 Protege SE	0	0	718	1,203	$1,921
Nissan Sentra XE	0	0	531	1,346	$1,877
Ford Escort LX	0	0	314	1,404	$1,718
Geo Metro	121	0	363	1,080	$1,564
Subaru Loyale	0	47	570	945	$1,562
Plymouth Horizon	231	480	341	424	$1,476
Geo Prizm	267	0	466	732	$1,465
Hyundai Excel	125	113	460	721	$1,419
Mitsubishi Mirage EXE	0	73	611	513	$1,197
Dodge Shadow	0	0	676	479	$1,155
Toyota Corolla DX	0	0	448	492	$ 940
Honda Civic DX	0	344	200	225	$ 769

Cars tested were 4-door models. SOURCE: Insurance Institute for Highway Safety

Ford completes $2.5 billion Jaguar purchase

By Jim Henry
AUTOMOTIVE NEWS STAFF REPORTER

Ford Motor Co. has officially completed its $2.56 billion purchase of Jaguar plc. The buyout, which was agreed to last fall, became effective Feb. 28.

Jaguar's stock appeared for the last time among the National Association of Securities Dealers Automated Quotations listings on March 1, as the company became a subsidiary of Ford.

Jaguar was founded by William Lyons in England in 1922 as Swallow Sidecar Co.The first vehicle to bear the Jaguar name, the SS Jaguar 2.7-liter sedan, was introduced in Europe in 1935. The company became Jaguar Cars Ltd. in 1945.

It was merged with British Motor Corp. in 1966, then with Leyland Motor Corp. in 1968 to form British Leyland Motor Corp. Ltd.

John Egan, who was later knighted, was hired as chairman of Jaguar in 1980. Soon afterward that, Jaguar began operating as a separate unit of BL.

In July 1984, Jaguar plc was established as the holding company for Jaguar Cars Ltd.

Common shares of Jaguar plc began trading in August 1984 on the London Stock Exchange.

American Depositary Receipts, representing common stock, were traded over-the-counter and listed on the NASDAQ network.

Driving curbs cut smog in Mexico City

By Stephen Downer
STAFF CORRESPONDENT

MEXICO CITY — Four months after a ban that keeps 500,000 vehicles off the streets daily was enacted, the mayor of Mexico City said air pollution is down and the state's oil monopoly is promising cleaner gasoline.

The temporary measure was enacted last November to curb Mexico's City stifling smog.

According to Mayor Manuel Camacho Solis, air pollution levels have been reduced by as much as 15 percent. But he said it will take another two months to assess the program's success and to decide whether to continue it beyond April 30. The program was scheduled to end Feb. 28.

Experts said privately owned cars produce more than 50 percent of this area's air pollution. Now Petroleos Mexicanos, the state-run oil monopoly, is promising to offer a new oxygenated gasoline that will be available throughout the year, Camacho Solis said.

Pemex claims the new gasoline reduces carbon monoxide emissions 15 percent and hydrocarbon emissions 12 percent. That, experts said, is equivalent to sparing the capital's population of 920 tons of carbon monoxide and 44 tons of hydrocarbons, among other pollutants, each day.

The ban operates through a 5-sticker system and affects about 2.5 million vehicles. On Mondays, for example, vehicles with a yellow sticker are prohibited.

Since the ban was enacted, demand for new cars has been strong. In January, for example, industry sales were 20 percent higher than a year earlier. Some analysts believe many people are buying a second vehicle to avoid having to use public transportation when one of their vehicles is banned.

TAKE CONTROL OF YOUR DEALER PLATES NOW...

SECURITAG SYSTEM reduces liability, insurance costs, and the number of tags in use. Also prevents unauthorized use, increases sales through more demo rides, eliminates the need for constant tag checks and helps maintain floor control.

National and International Distributor Inquiries Invited

Air-bag makers prepare for increased demand

By Lindsay Chappell
AUTOMOTIVE NEWS STAFF REPORTER

Suppliers are responding to the auto industry's plans to increase air-bag installations dramatically during the next four years.

As U.S. carmakers prepare to install about 10 million air bags annually by the mid-1990s, the two largest air-bag makers are adding capacity for both air bags and air-bag inflators, the devices within the module that deploy air bags in a collision.

TRW Inc. is attempting to acquire land in Mesa, Ariz., for a plant that could produce up to four million air-bag inflators a year by 1994, officials there said. The proposed plant would also manufacture the gas propellent used in the inflators.

TRW, the primary supplier of air bags to Ford Motor Co., also is expanding capacity at an existing plant in Mesa from 1.1 million inflators a year currently to 2.9 million by the end of this year.

Additionally, TRW's chief global competitor, Morton International Inc., has entered into a 50-50 joint venture with Allied-Signal Automotive's Bendix Safety Restraints Group to manufacture air-bag modules in Maryville, Tenn. That venture will produce up to 1.8 million air bags annually for use in Chrysler Motors and General Motor cars, starting next year.

TRW is also nearing completion of a new air-bag plant in Cookeville, Tenn., that will begin manufacturing driver-side and passenger-side bags later this year. TRW has not determined what that plant's capacity will be, TRW spokesman Michael Jablonski said. The plant will have six assembly lines, but will use only one initially.

By the mid-1990s, TRW will have total production capacity for 5.9 million driver-side air bags and 5.5 million pasenger-side bags. TRW's output of air-bag inflators will be even larger because the company will supply the components to some Japanese companies.

At the same time, the industry is breathing easier this month because a critical North American supplier of air-bag propellant has resumed production.

CIL Corp. of Toronto said a 4-month production problem at its McMasterville, Quebec, plant has been corrected, and the plant is back to full output. The plant produces almost all the North American industry's supply of sodium azide, the volatile compound that is used to make gas generant.

Two mysterious fires last fall forced CIL to halt production of sodium azide, causing both TRW and Morton to seek temporary overseas sources. A CIL company spokesman said the problem was isolated to the compound's drying process and has been corrected.

The company is also resuming a project that will more than double the output of the chemical by late summer. The expansion, interrupted by the first fire in October, will increase plant capacity to 1,400 tons a year.

The developments reflect the growth in the air-bag industry. The Big 3 automakers now indicate that as many as 5.9 million of their U.S.-built cars will receive air bags by 1994, compared with about 75,000 in 1988.

After a 4-year phase-in, passive restraints became mandatory on 1990 cars. Makers have been meeting the standard by installing air bags or automatic seat belts. Cars with driver-side air bags don't have to have passive restraints on the passenger side until the 1994 model year.

Chrysler Motors has made driver-side air bags standard equipment in all its domestically developed cars.

In January, Ford Motor Co. said it will install both driver-side and passenger-side bags in all its U.S. cars by 1994, representing more than two million vehicles. Last November, General Motors said it will install driver-side air bags in 1.3 million new vehicles in the 1991 model year and 2.7 million vehicles in 1994.

GM also said it will equip about half of its new cars with passenger-side bags by that time.

According to industry plans, almost 12 million air bags will be installed annually in the United States by the mid-1990s, counting both driver and passenger-side bags.

The figure could climb to more than 20 million if manufacturers begin installing them in light trucks.

The demand could go even higher if Japanese makers, who have been slow to commit to the devices, embrace air-bag technology. Honda Motor Co. plans to make bags available as an option on 100 percent of its American-sold vehicles by 1994. But it will depend mostly on motorized seat belts to meet current regulations.

Air bags are standard equipment in about 150,000 U.S.-sold Toyota cars this year, but Toyota has made no additional commitment for subsequent years. Mazda Motors is installing air bags on two models this year, the Miata and the RX-7 convertible.

Zero coupon bond ads backfire on N.J. chain

By Helen Kahn
SENIOR CORRESPONDENT

New Jersey authorities have charged nine dealerships known as the Sansone Auto Network and its advertising agency with misleading advertising of zero coupon bonds to induce car sales.

The state's Bureau of Consumer Affairs charged Sansone with deception because of alleged failure to disclose material information when offering customers a $5,000 zero coupon bond. The bond, deeply discounted because it offers no interest, is worth only about $590. It is not worth $5,000 until maturity.

The bureau, which recently obtained an injunction against Sansone for falsely advertising a half-price sale, is telling investors to seek expert advice before buying or receiving zero coupon bonds. "You may have researched car prices," the bureau warns, "but you can still lose your shirt if you aren't given full disclosure on zero coupon bonds."

Robert Schwartz, former president of Rolls-Royce Motor Cars Inc. in the United States, now heads the Sansone Auto Network in Neptune. Schwartz said the idea to offer the bonds was first run by company attorneys and lawyers in the state bureau of consumer affairs and state security exchange office. Final adjustments were made before the job was given to Sansone's own ad agency and to Gray Advertising in Fort Lauderdale, Fla. The ads list maturity dates.

Schwartz said the whole action is "very strange" because he was given no notice of any charges until reporters started to call. He said he is still under the impression the ads were acceptable to the state offices.

New Jersey is seeking a cease and desist order and civil penalties of up to $150,000.

Paul Sansone is named in the charges along with Royal Lincoln-Mercury, Hopelawn; Sansone Ford, North Brunswick; Galleria Lincoln-Mercury, Avenel; Sansone Nissan, Avenel; General Toyota, Avenel; Dominic Sansone, doing business as Lakewood Toyota, Lakewood; Ford's National Auto Mart, doing business as Plaza Ford, Neptune; Paladin Chevrolet, doing business as Joseph Chevrolet, Perth Amboy; and Sansone Oldsmobile-Cadillac, Red Bank.

Sales dip; Japan gains market share

By Mary Connelly
AUTOMOTIVE NEWS STAFF REPORTER

This year's mini sales recovery ground to a halt in February as new-car sales in the United States dropped 3.91 percent to 725,458 units.

Sales rose in January and in the first 10 days of February. Declines in the next two periods pulled February sales below last year's.

Japanese automakers gained 3.98 percentage points of market share last month while the Big 3 lost 3.25 points. European and Korean makes also fell back.

February car sales — including captives — were off 4.48 percent at General Motors, 11.94 percent at Ford Motor Co. and 14.05 percent at Chrysler Corp.

Japanese manufacturers' penetration of the domestic car market mounted from 23.21 percent in February 1989, to 27.19 percent in February 1990.

The Japanese posted a similar gain for the first two months of 1990, rising to 27.09 percent from 23.35 percent a year ago.

During that 2-month period, GM was the only one of the Big 3 to hold its own. GM's market share for the first two months of 1990 was 35.65 percent compared to 35.30 percent last year.

Ford Motor's share fell from 23.99 percent in the first two months of 1989 to 21.73 percent this year. Chrysler's share dipped from 10.38 percent last year to 9.50 percent in 1990.

Buick and Cadillac increased their market shares, but Oldsmobile and Pontiac lost ground. Chevrolet posted a market share gain for the two months of 1990, garnering 14.89 percent of domestic-car sales compared to 13.11 percent in 1989. GM has said its strategy to gain market share relies in large part on a rebound by Chevrolet, its volume-leader.

Lincoln was the only Ford Motor Co. brand to post a gain in the first two months of the year. Ford Division's share of the U.S. market

SALES

FROM PAGE 46

dropped from 16.68 percent in 1989 to 14.96 percent in 1990. Mercury dipped from 5.35 percent to 4.19 percent this year.

Plymouth was the only Chrysler car line to gain market share in January and February. Its share rose from 2.66 percent to 3.00 percent.

Toyota and Honda were big gainers among the Japanese lines. Toyota's 2-month share of the overall U.S. market — including its Lexus luxury line — climbed from 5.96 percent last year to 8.42 percent. Honda's share — including Acura — rose from 6.85 percent to 8.06 percent.

Mitsubishi rose from 0.84 percent of the total U.S. market last year to 2.22 percent in the first two months of 1990.

For two months, Acura had a commanding lead over its two new rivals in the Japanese luxury-car class. The totals were Acura, 20,106; Lexus, 8,306; and Infiniti, 2,146.

In the February light-truck market, GM was the only one of the Big 3 to post a gain. GM light-truck sales rose 0.84 percent to 120,980 units.

With no minivan rebate, light-truck sales dropped 20.97 percent at Chrysler. The minivan rebate expired Jan. 31. Light-truck sales fell 6.05 percent at Ford.

Total domestic light-truck sales dipped 7.58 percent in February compared to a year ago. But for the first two months of the year, truck sales climbed 2.20 percent to 716,612 units.

Record $20.8 million purse set for CART 16-race 1990 season

By Dutch Mandel
AUTOMOTIVE NEWS STAFF REPORTER

BLOOMFIELD HILLS, Mich. — Indy car racers will vie for a record $20.8 million during the 16-race 1990 season — a 39 percent increase over in 1989.

The increase makes the events sanctioned by Championship Auto Racing Teams Inc. the richest series in the world.

In 1990, the CART season boasts six $1 million events and an anticipated $6 million in payouts for the United States Auto Club-sanctioned Indianapolis 500.

Nine other upcoming CART events will have $700,000 purses.

"What a great indicator of the success, high quality and competitiveness of the CART series," said 2-time series champion Bobby Rahal. "It is certainly the success of the CART series from a marketing standpoint that generates these dollars."

A CART spokesman said the purse increases are from long-time sponsor PPG Industries, greater television-coverage revenue and other corporate support increases.

The most dramatic purse increases are at Phoenix, Ariz.; Cleveland; Road America (Elkhart Lake, Wis.); and Nazareth, Pa. Those events have boosted purses 55 percent over last year's payout.

The 1990 PPG Indy Car World Series begins April 8 at the Autoworks 200 in Phoenix.

GARY JENKINS

A ZR-1 Corvette, foreground, set seven speed and endurance records including one for 24 hours at 175.885 mph. The L98 Corvette, background, set five records.

Corvettes set endurance records

By Dutch Mandel
AUTOMOTIVE NEWS STAFF REPORTER

Two Chevrolet Corvettes appear to have established 12 new international endurance records — records the company hopes will translate to greater overseas sales.

An off-the-shelf Corvette ZR-1 averaged more than 175 mph — for 24 hours — shattering a 49-year-old endurance mark. A modified L98 Corvette also established new international endurance standards.

The 24-hour record is considered to be the ultimate test of a car's durability.

The records have given Chevrolet ammunition in its attempt to prove its cars can sustain high speeds for great distances — a testimonial future European customers can relate to more easily, said Chevrolet spokesman Ralph Kramer.

Chevrolet's International Export Sales department was behind the push to set the endurance marks prior to the opening of last week's Geneva auto show, according to Kramer. The endurance run was held March 1 and 2.

After its run, the record-setting L98 Corvette was air-freighted to the Geneva show for display.

In all, 12 records were broken — three world endurance and nine international class marks. The records include distances of 100 kilometers and 100 miles, 500 kilometers and 500 miles, 1,000 kilometers and 1,000 miles and 5,000 kilometers and 5,000 miles. Time records of 1-, 6-, 12- and 24-hour periods also were set.

All marks established by the Corvette team are contingent upon certification by the Federation Internationale de l'Automobile.

A modified L98 Corvette captured five of the records while the stock ZR-1 established seven.

The endurance run, organized by Tommy Morrison of Albany, Ga., was conducted at a 7.712-mile oval track in Fort Stockton, Texas.

The 24-hour record of 175.885 mph is almost 15 mph faster than the mark set by high-performance pioneer Ab Jenkins in his Mormon Meteor III on the Bonneville Salt Flats in Utah in July 1940. The Jenkins record, the last major pre-World War II endurance record still on the books, was 161.180.

Peugeot unveils new 4ws racer

By Dutch Mandel
AUTOMOTIVE NEWS STAFF REPORTER

Automobiles Peugeot officials hope to transfer the company's off-road racing success to the race track.

The company unveiled its new 905 World Sports Car Championship racer, an aerodynamically sleek car aimed at competing at endurance events such as the 24 Hours of LeMans.

Peugeot hopes the race car will see track time at events in Mexico and the United States starting in October, contingent on gaining permission from the Federation Internationale du Sport sanctioning body.

Peugeot has high hopes for its 905 World Sports Car Championship racer.

Plans call for the company to compete in each of the season's events held in 1991.

The Peugeot 905 appears to be a technological wonder in one respect: 4-wheel steering will allow the car to negotiate tight, twisty tracks where the technology may prove an advantage. Peugeot will use 4ws cars at two of the season's 12 tracks.

Subaru may promote 1-2 Alcan Rally finish

By Dutch Mandel
AUTOMOTIVE NEWS STAFF REPORTER

Subaru is mulling the potential marketing uses of its 1-2 finish in the Alcan Endurance Rally.

The 6,275-mile trek across Alaska and the Yukon Territory ended Feb. 16. It is billed as the longest winter rally in history.

A Subaru of America spokesman said the win could be used in marketing or advertising.

According to Fred Heiler of Subaru of America, "Our marketing plan is about durability and traction, and this was a perfect test of that."

The only modifications to the factory-backed Legacy wagons were extra driving lights, rally computers and more fuel capacity. Neither had anti-lock brakes.

CENSUS

FROM PAGE 1

tive or an independent.

A year earlier, the breakout was 19,593 Big 3 outlets and 5,320 import-only spots.

Sales dipped for both domestic cars and imports last year. The National Automobile Dealers Association has estimated that 24 percent of the nation's dealers lost money in 1989, and another 29 percent made a profit of less than one percent on their operations.

The profit drain was the principal reason for the decline in the dealership total. Others include death or retirement of an owner and a decision by the factory not to refranchise the point; shifting market patterns that change the number of outlets in an area; and hard times experienced by a particular make, either domestic or import, that caused retailers to bail out.

At the beginning of this year, a Big 3 auto could be purchased at any of the 19,379 locations noted above. Imported cars were available at 22,579 outlets. Why the difference? The census lists 5,197 stores that carry only imports; *Automotive News* estimates that only 1,997 dealerships handle Big 3 cars without an import on the premises.

In addition to the 5,197 import-only spots, 17,382 dealerships handle both an import and a domestic make. About 16,200 of those have a captive import. A captive is a nameplate that is sold only by the domestic make that imports it. Examples are LeMans by Pontiac or Festiva by Ford.

Because of dualing, the number of new-car dealerships in the United States was 24,576 on Jan. 1.

Last year's 214-dealership loss in the Big 3 ranks resulted primarily from a decline of 200 outlets at General Motors. Ford Motor Co. had a slip of 38 for the year, and Chrysler Corp. was down one.

A change in the number of intercorporate duals reduced the Big 3 dip to 214. An intercorporate dual is a dealership that handles — in the same showroom — cars produced by two or all members of the Big 3. Most of them twin Chrysler's Eagle with GM or Ford lines. Eagle is the former American Motors dealer organization that was acquired by Chrysler Corp. in the 1987 takeover. AMC was very big on Big 3 duals.

All figures in this article and in the accompanying tables refer to the net change in the dealership population.

Chrysler Corp. increased its dealer total six consecutive years before the 1989 dip of a single outlet.

Ford Motor's drop of 38 last year compared with a loss of nine in 1988, and GM's decline of 200 was more than twice as high as the 85 that bowed out in 1988. Last year was GM's biggest slip since 1982.

Franchise totals declined for most Big 3 makes last year. Eagle was up 76; Cadillac added 10; and Buick and Pontiac showed no change. Losses ranged from one for Lincoln to 35 for Chevrolet. Conversely, Chevrolet's Geo total rose 27 for the year.

In addition to their car dealerships, Ford Motor has 103 stores that handle only Ford heavy-duty trucks, and Chrysler Corp. has three Dodge-truck-only and 23 Jeep-only outlets. In this article and the accompanying tables, those points are omitted from the car-outlet and franchise totals.

Also, GM has 460 locations that carry GMC trucks but do not handle GM cars. GM has 9,250 car dealerships; its overall vehicle dealership count is 9,710.

The 5,197 import outlets consist of 4,014 single-line locations and 1,183 that sell two or more imports but no domestic cars. The revised breakout for Jan. 1, 1989 shows 4,201 exclusives and 1,119 duals.

The number of exclusives dipped by 187 during 1989 as various import dealers decided not to continue with only one line in the showroom. The rise in import-only duals reflects that movement.

The exclusive total would have dropped considerably more had it not been for the entry of Lexus and Infiniti. Lexus added 88 single-liners to the import ranks, and Infiniti added 58.

Japanese cars account for 76 percent of the import exclusives. Leaders are Honda, 771; Toyota, 711; Nissan, 554; Acura, 303; Mazda, 249; and Subaru, 216. The only non-Japanese make over 200 is Hyundai with an estimated 245, down from 278 a year earlier.

Hyundai is something of an anomaly. Although its exclusives are down, its overall dealer total rose from 278 to 323 in a year that brought a sales decline of 31 percent. Usually, such a plunge decimates an import's dealer network.

About 16,200 domestic dealerships handle a captive import, up from 15,000 a year ago. Eagle's return to the captive field made the difference. At the beginning of 1988, Eagle dealers had no captive; in 1989, Eagle dealers began selling the Mitsubishi Summit.

All Chrysler Corp., all Ford Motor and all Pontiac dealers have a captive import. So do Chevrolet dealers with the Geo franchise.

Mercury's Merkur line died last year, but it did not affect the captive situation at Ford Motor Co. Mercury dealers still have a captive import — the Mexican-built Tracer.

New-car franchises in the United States totaled 50,747 on Jan 1, down 1.27 percent from 51,400 at the beginning of 1989. Japanese franchises rose to 6,788 from 6,293, and Mitsubishi was the biggest gainer, up 165. South Korea's total grew as Hyundai increased. Franchises declined for all other nations represented in the U.S. market.

FORD

FROM PAGE 1

fore he was assigned there last May.

"The learning curve has been pretty steep," said Ford, who holds a bachelor's degree from Princeton University and a master's in science from Massachusetts Institute of Technology.

He learned by talking with Ford heavy-truck dealers, customers and suppliers, some of whom had some "tough things to say to us." Ford also attended truck driving school and got his heavy-truck driver's license.

Ford said that after seven months on the job, he was starting to ask intelligent questions and know when he was getting intelligent answers.

He said he's making contacts and learning more about what makes the company run.

"If you look at my resume, I really have bounced all over the corporation. I really don't regret all those moves," he said.

"As a matter of fact, most of them were super, and I made excellent contacts and have a pretty good understanding of how the company works."

And he's impressing Ford's top management along the way.

Last week, Gilmour said Ford is "shrewd and perceptive about the wide range of business that (Ford) has, and he's darn smart."

Two years on the board of directors have given him more experience looking at the broader "big-picture" issues facing the corporation. Ford said Feb. 16 that he wanted his next job to be in an area of the company where he is looking at macro-economic issues, not day-to-day details.

"I'm not very good in managing details," he said. "My natural inclination would be to tackle larger issues. And that, of course, ties in with the whole board responsibility as well, where the larger issues are undertaken. So it would be interesting to have a job that tied into the board experience, too."

Ford's new position seems to satisfy that desire perfectly. He will be looking for new joint ventures and product niches for the automotive group, while keeping close tabs on the competition.

Asked what the company needs to work on in the next three years, he said Ford is not "best in class" in the powertrain area and is spending a considerable amount of time and money to reach that status. He is also concerned about how the company will spend its huge financial resources.

"Probably the biggest challenge for us is to spend our money intelligently. We have a huge product program scheduled for the next five years, and I hope it is spent well," Ford said.

"I think it's a huge challenge for us because other companies have shown us you can throw money at problems and not necessarily fix them."

Ford said he is satisfied with his larger role on the company's board of directors. He added that the Ford family's dispute with former Ford Chairman Donald Petersen on the cousins' limited role on the board "was overblown." Ford said he, Edsel and Petersen ironed things out quickly after a *Fortune* magazine article about the dispute appeared in January 1989.

"They (Edsel II and William Jr.) are following a difficult path trying to be both family and management," said Petersen during one of his last interviews before retiring.

Ford said the dual responsibilities have not been so difficult.

The disagreement between the elder William Clay Ford and Petersen on giving the two cousins additional responsibilities on the board in early 1989 was a timing issue, said Petersen.

But the Fords eventually prevailed. The cousins were given board committee assignments in May 1989. Edsel II and William Jr. serve on the finance and executive committees. Both are chaired by the elder William Clay Ford.

William Jr. said he and Edsel "did not want to come off as young know-it-alls" when they joined the board in January 1988.

"There's a natural inclination to be quiet and to learn," he said. "It's kind of evolved in the last year that I've become much more comfortable as I've gotten to know the outside directors. And they have all encouraged me to be active, and so I have . . . both on the board and on the finance committee."

He said the Ford family wants to have a role in running the company, but that does not necessarily mean having a Ford as chief executive unless he or she is qualified.

"I think the family wants to see the company well run, and if they thought a family member wasn't qualified, I think they'd just as soon see an outsider run it. It's a huge financial investment for all of them, and if they thought a family member would mismanage it, they wouldn't want him there."

As a family member, Ford believes he has a different perspective than non-Fords.

"As a member of the family, I'm really concerned about the long-term interest of Ford Motor Co., and that's not to say the others are not, but most of them have a much shorter horizon in terms of their career," Ford said.

"Plus, I will be living with the decisions that are made at the board level and the finance committee level a lot longer than any of them will. So in that extent, I have a very long viewpoint, which may give me a different perspective than some of the others."

Eby, Barnes also named to strategy posts

DEARBORN, Mich. — Three groups were established in the reorganization of Ford Motor Co.'s strategic planning functions.

- **A corporate strategy office reporting to Ford Chairman Harold Poling. It is headed by John T. Eby.**
- **An automotive business strategy group reporting to Allan D. Gilmour, president of the Ford Automotive Group. It is headed by William Clay Ford Jr.**
- **A diversified business strategy group reporting to Peter J. Pestillo, vice president of employee and external affairs. John E. Barnes Jr. continues as executive director of business strategy for diversified operations.**

Those organizations made up the former corporate strategy and diversification planning staff.

Eby was appointed executive director, corporate strategy. That activity will be responsible for strategic planning at the corporate level and for business planning worldwide. Eby was director of corporate business development for the corporate strategy and diversification planning staff.

Output rises in February, but trails '89

By Karen Detkowski
SPECIAL CORRESPONDENT

Domestic auto production of 497,112 for February fell 18.37 percent from the year-ago month but rose 39.36 percent over January's total. January output was severely affected by downtime.

Last week's scheduled assembly of 134,026 cars was 2.19 percent above the previous week, but 10.45 percent below the year-ago week.

Automakers assembled their millionth vehicle of the year March 8, almost three weeks behind 1989.

Year-to-date, 1,031,743 cars have been built, 30.76 percent below last year.

Companies split last week's estimated production as follows: General Motors, 43.18 percent; Ford Motor Co., 25.53 percent; Chrysler Motors, 11.49 percent; Honda of America Manufacturing Inc., 6.74 percent; Toyota Motor Manufacturing U.S.A. Inc., 3.28 percent; New United Motor Manufacturing Inc., 3.06 percent; Mazda Motor Manufacturing (USA) Corp., 2.41 percent; Diamond-Star Motors Corp., 2.20 percent; Nissan Motor Manufacturing Corp. U.S.A., 1.78 percent; and Subaru-Isuzu Automotive Inc., 0.33 percent.

U.S. truck output totaled 317,777 in February, 29.76 percent above January's stunted output, but 16.60 percent below the year-ago tally, which was the highest February total ever.

Truckmakers scheduled 84,394 units last week, 0.75 percent above the prior week, but 7.86 percent below the year-ago week.

So far this year, 684,804 trucks have been assembled, 25.00 percent below last year's total at this time.

Ford slated Saturday overtime last week at its Wixom, Mich., plant, which builds Lincolns, and its Louisville, Ky., truck plant, which makes the 1991 Explorer.

Canada tops January build

Canadian carmakers assembled 85,646 units in February, 47.02 percent above the prior month and 1.93 percent above the year-ago month.

Last week's scheduled car output totaled 30,325 units, 10.58 percent above the previous week and 55.04 percent above the year-ago week.

As evidenced by last week's figures, Canadian car production is catching up to the year-earlier total. Major reasons are the new Toyota and Hyundai facilities and increased Chevrolet Lumina production by General Motors.

So far this year, 187,998 cars have been produced, down 4.40 percent from last year.

Truck output last month totaled 74,516, the lowest February figure since the 71,178 built in 1985. February's truck output was 18.38 percent above January but 14.12 percent below the year-ago month.

Truckmakers last week slated 19,806 units, 1.83 percent below the previous week and 5.67 percent behind the year-ago week.

Year-to-date, 166,387 trucks have been produced, 19.92 percent below last year at this point.

Japanese methods flower at Ford

Escort brings Mazda touch to Dearborn

By Laura Clark
AUTOMOTIVE NEWS STAFF REPORTER

WAYNE, Mich. — Inside Ford Motor Co.'s new stamping plant here, workers and managers are changing the way Ford builds cars.

Workers change dies on the giant Komatsu presses in as little as 2 minutes — compared to 6 to 12 hours in a traditional Ford stamping plant.

Automated guided vehicles deliver sheet metal to the presses that stamp doors for the Ford Escort, which will be assembled in the Wayne assembly plant next door. The Escort and its sister model, the Mercury Tracer, are based on the same platform as Mazda's all-new 323/Protege.

The Wayne Integral Stamping and Assembly plant is patterned after the Flat Rock, Mich., plant of Mazda Motor Manufacturing (U.S.A.) Corp.

It's no coincidence that the presses come from Japan and that the Wayne setup mimics Mazda's.

From the assembly line to the executive offices, Ford's product development and manufacturing are becoming increasingly Japan-like. Since the mid-1980s, Ford has grown closer to and has learned from its Japanese partner, Mazda Motor Corp.

The student has also been a teacher. Mazda has learned from Ford such things as cost containment, air-bag technology and ways to reduce noise vibration on vehicles, say Ford leaders.

Even at the outset of the Escort/Tracer program, known as the CT20 platform, Ford Chairman Donald Petersen hoped the close association would lead to changes at his company.

"CT20 must be more than just a new car. It should represent significant new processes in vehicle development, manufacturing and the utilization of human resources," Petersen told CT20 workers.

At Wayne stamping, job classifications for non-skilled workers have dropped from 12 to one, thanks to a new contract. Skilled workers such as electricians and welders swap responsibilities they once fought for. Just like Japanese workers, Wayne stamping workers eat beside plant managers in the plant's cafeteria and park in the

Toyota, Honda tops in sales per dealer

Hyundai dethroned after 3 big years

By Charles M. Thomas
AUTOMOTIVE NEWS STAFF REPORTER

After three years as the leader in sales per dealership, Hyundai fell to fourth place in 1989.

Toyota replaced Hyundai as the pacesetter in car/truck sales per outlet, and Honda had the best average in car sales.

The averages show the relationship of the number of new-vehicle sales for a particular make to the number of dealers selling those vehicles. They are a measure of the relative value of a franchise.

Toyota dealers sold 817 new vehicles per store, and Honda dealers moved 677 cars per outlet. Honda was second in the combined car/truck standings even though it does not sell trucks.

Dismal sales and more dealers caused Hyundai to slip to fourth place. Average sales per dealership skidded to 610 in 1989 from 1,053 a year earlier on an overall unit sales decline of 30.65 percent.

In 1986, 1987 and 1988, Hyundai was far ahead of every other make retailed in the United States in average new-vehicle sales per outlet. It led in cars, and it led in cars and trucks — even though it does not sell trucks.

Hyundai is the only make that has exceeded 1,000 sales per franchise in the 35 years *Automotive News* has been compiling such statistics. Hyundai's average of 1,431 units in 1986 was the highest on record.

Sales per dealership are another way of keeping score in the auto industry. Carried to greater lengths at the factory/importer level, the figures can help in formulating sales-planning and distribution programs on a regional basis. And sales-per-dealer figures have been used in dealer-factory litigation.

A gain in sales and a stable dealer total means an increase in sales per outlet. Conversely, a gain in unit sales may not be enough to hold the average steady if the dealer total rises sharply.

Mitsubishi was an example in 1989. Its car and trucks sales rose nearly 32 percent, but its dealer total grew 66 percent. The result: Sales per outlet dropped to 453 from 571 in 1988.

If unit sales decline and the dealer total rises, the sales-per-outlet plunge can be extensive. Consider Hyundai. Its car sales dropped 30.65 percent last year while its dealer total rose 16 percent. As a result, sales per dealership plunged from 1,053 to 610.

The trend last year was toward lower average vehicle sales for the 42 makes of cars

BARRY PEPFORD

Chevrolet's 1991 Caprice wagon looks like a big jelly bean to some enthusiasts, a Ford Taurus clone to others.

WAGONS: *New research indicates this '50s staple is poised to make a resurgence in the '90s*

By Michelle Krebs
AUTOMOTIVE NEWS STAFF REPORTER

DETROIT — Futurists predict that the 1990s will be the 1950s revisited, and automakers believe that could mean the resurgence of a 1950s staple: the family station wagon.

Some automakers bet that baby boomers having babies will trade in their coupes and sedans for wagons as well as minivans.

While no one expects wagon sales to reach the million-plus level of 1979, research by a number of car companies and independent firms indicates that wagon sales could rebound in the 1990s from their low-water mark of the previous decade.

J.D. Power and Associates, an Agoura Hills, Calif., market research firm, predicts wagon sales will climb to 770,000 units by 1995, capturing 7 percent of the total car market, compared with 5 percent in 1989. Station wagon sales dropped to less than 500,000 units in 1989, according to R. L. Polk & Co. of Detroit.

In addition to baby boomers settling into family life, a host of new products in the 1990s will spur the rebound, automakers say. In the next two years alone, more new station wagons will debut than were introduced during all of the 1980s. Virtually all will be from General Motors, Ford Motor Co. and the Japanese automakers along with a couple European models.

In the 1980s, automakers predicted wagons would die with the advent of the minivan. They turned their attention to vans and ignored wagons. Chrysler Corp., which invented the minivan, dropped out of the station wagon market almost entirely.

The only new wagon of any volume to be introduced during the 1980s was the highly successful Ford Taurus/Mercury Sable wagon. About 20 to 25 percent of the Taurus and Sable models sold were wagons, an unusually high

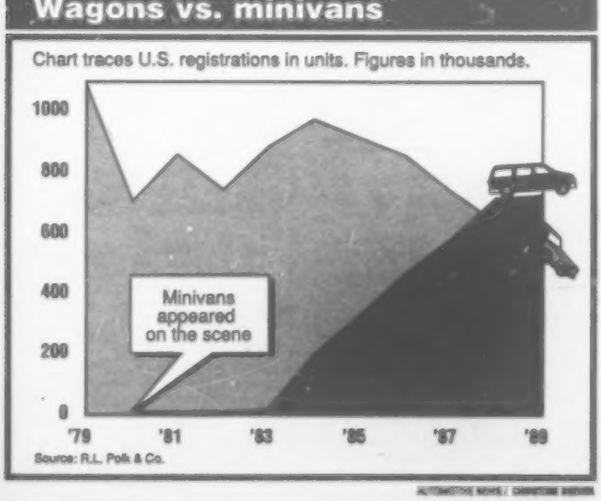
Wagons vs. minivans



Beaman, major Saturn dealer, gives up Nashville franchise

By Lindsay Chappell
AUTOMOTIVE NEWS STAFF REPORTER

NASHVILLE, Tenn. — Nashville auto dealer Lee A. Beaman, a prominent player in the formative days of the Saturn project, has given up his middle Tennessee Saturn franchise.

The deal comes just months before GM's long-awaited import fighter goes into commercial production. Beaman, 38, said he intends to spend more time on his six other franchises and on a family owned Pepsi and 7-Up bottling business.

Chattanooga Saturn franchisee Nelson Bowers II acquired the contiguous Nashville territory. The move gives him a full third of Tennessee for Saturn sales — including the area where many of the anticipated 3,000 Saturn employees will live and work.

Beaman has been highly visible in Saturn's early marketing and dealer recruitment efforts and was even expected to appear in some Saturn ad campaigns. As recently as last year, he was projecting an early completion of his first Saturn store. And he had plans to use the property in Saturn's marketing spots.

In the early days of Saturn planning, Beaman successfully urged the General Motors subsidiary to

REBATE BACK

In the end, Olds dealers asked for one

By Michelle Krebs
AUTOMOTIVE NEWS STAFF REPORTER

DETROIT — Still not satisfied with the sales of its restyled Toronado, Oldsmobile is giving it customer rather than dealer incentives, which cuts the car's price to pre-1989 levels.

Incentive programs revised, Page 49

Oldsmobile officials said they continually evaluate dealer and customer incentives. The customer rebates, they said, were placed on the cars at the request of dealers.

That's a further departure from the course Oldsmobile set late last year. At the time, Oldsmobile said it would offer incentives only to dealers, not directly to customers.

A Toronado or Trofeo buyer has the choice of a $1,500 cash rebate or 6.9 percent financing on a 48-month loan.

The offer runs for an unusually long period, from March 13 through Sept. 26.

Many dealers, not only Oldsmobile dealers, have pushed for

see OLDS, page 44

Sales of 1990 Toronados are up a third over the 1989 model.

Battle lines drawn in debate over alternative fuels

By Diana T. Kurylko
AUTOMOTIVE NEWS STAFF REPORTER

WASHINGTON — A fight over alternative fuels is expected in Congress this week as the House and Senate plunge into debate over the last major automotive clean-air issue.

A preview of the battle was provided in Washington last week, as the Motor Vehicle Manufacturers Association, Automobile Importers of America and National Automobile Dealers Association staged a press conference to outline their positions.

Their claims were countered by environmentalists, who said the industry is once again crying wolf when it says it can't meet demands for cleaner air. And the powerful natural gas lobby offered a plug for fuels other than gasoline — including natural gas.

The auto industry is pushing for reformulated gasoline.

While it would cost 2 cents to 5 cents more per gallon than premium gas, it would require no engine modifications, and it would immediately reduce pollution from cars using it, said Sam Leonard, director of automotive emissions control at General Motors.

The next best alternative would be so-called flexible-fuel vehicles, such as those that run on a mixture of gasoline and methanol.

In the meantime, the industry interests spoke out against some of the most stringent alternative-fuel proposals. It was argued that they leave no room for reformulated gas and flexible fuels, and instead could be met only by vehicles running on natural gas, electricity or 100 percent methanol.

The industry sees its biggest threat in an amendment to the recent Senate-White House clean-air compromise.

The measure, sponsored by Sens. Timothy Wirth, D-Colo., and Pete Wilson, R-Calif., includes demands for an alternative-fuels program that is significantly tougher than the one originally proposed by the Bush administration. The amendment would require the production of alternative-fueled cars beginning in 1994 and "ultra-clean" cars in 2003.

Such vehicles would have dramatically reduced tailpipe emissions as well as hydrocarbon emissions that enter the atmosphere during refueling and while cars are running.

The Senate resumes a floor debate Tuesday on clean air. In the House, the full Energy and Commerce Committee will begin debate on a draft bill supported by the

Ford tests methanol in Michigan

By Jack Koebler
AUTOMOTIVE NEWS STAFF REPORTER

DEARBORN, Mich. — This week, John Krisko's Sunoco Ultra Service Center here will begin pumping M85 — a mixture of 85 percent methanol and 15 percent gasoline — into a Ford Motor Co. test fleet consisting of Taurus and Crown Victoria autos and Econoline vans.

This is only the second such pump at a commercial gasoline station. The other pump is at a station in California.

The station and the vehicles are part of a joint research agreement between Ford and Sun Refining and Marketing Co. to investigate the use of M85 in vehicles used regularly in cooler climates.

"Ford's entry into a joint research program with Sun underscores our determination to meet the clean-air expectations of the American people and the clean-air requirements of Congress," said Donald R. Buist, Ford's director of automotive emissions and fuel economy.

"Although Ford has been engaged in methanol-vehicle research for more than a decade, all our previous retail station experience has been in the mild climate of California."

The company will also take the opportunity to evaluate motor oils specifically formulated for use in methanol-fueled vehicles, fuel-system materials, station tank and pump materials, fuel sensors and customer refueling impressions.

Access to the pump will be provided by a magnetic card issued exclusively to Ford employees. The card-reading machine will register the name of the user and the amount and cost of the fuel purchased.

1991 Escort GT has 16-valve Mazda-built engine and 12 percent price hike

Ford ups '91 Escort prices; options rise on cars, trucks

By Laura Clark
AUTOMOTIVE NEWS STAFF REPORTER

DEARBORN, Mich. — Prices of the 1991 Ford Escorts, which Ford Motor Co. announced last week, are up an average of 6.88 percent over 1990 models.

The increases range from $163 to $1,219, and the average hike is $577.

The dollar and percentage boosts are figured on a model-to-model basis, without sales-weighting or adjustment for equipment changes. Ford said the increase is 2.5 percent on average-equipped models, including transportation charges.

The company also announced that it has raised the prices of popular options an average of $29 a car for all Ford and Lincoln-Mercury cars except Escort and Festiva, effective March 12. Option prices on all Ford trucks, except Bronco II and Ranger, have also been increased.

Destination charges were hiked $20 on Ford F-series and Ranger pickup trucks and $15 on all Ford and L-M cars and other Ford light trucks on Jan. 15. Those charges went up $5 at the beginning of the 1990 model year.

Ford officials had said the 1991 Escorts — which go on sale April 26 — would be priced at or near the 1990 models. Ford wants the Escort to be a high-volume line to boost the company's corporate average fuel economy rating.

The 1991 Pony 2-door hatchback, the Escort price leader, will carry a base manufacturer's suggested retail price of $7,565, or 2.20 percent more than the 1990 Escort Pony. The 1991 Escort LX 2-door hatchback will be $8,247, 5.65 percent above the 1990 model.

The Escort GT, which has a high-output Mazda engine, will be $11,063 — 12.38 percent above the 1990 model. The Escort LX 4-door hatchback will be $8,674, up 6.61 percent, and the station wagon will be $9,259, up 5.97 percent.

Ford Division General Manager Thomas Wagner said several popular options have been made standard on the 1991 Escort. They include AM/FM stereo radio, electronic digital clock, split folding rear seat and full wheel covers.

The following options were among those increased on other Ford Motor Co. cars: power seats, up $10; power door locks, $9; speed control, $9; power windows, $9; power moonroof, $34; and JBL stereo sound system, $51.

On the Ford Taurus, power seats rose from $280 to $290; power windows, from $306 to $315; and power moonroof, from $741 to $775. The Town Car's JBL sound system rose from $525 to $576.

The following options were among those increased on Ford trucks: knitted vinyl bench seats, $10; captain's chairs, $7; AM/FM stereo, $10; and sliding rear window, $10.

3rd blast hits air-bag supply plant

Production halted; Canada facility is source for 2 Lincolns

By Lindsay Chappell
AUTOMOTIVE NEWS STAFF REPORTER

The third industrial mishap in six months hit a Canadian air-bag supply plant last week, leaving one worker critically injured and forcing a halt in production.

The March 14 explosion seriously injured two other workers at the McMasterville, Quebec, factory, owned by CIL Corp. of Toronto.

The accident forced the third production shutdown in six months at the industrial compound.

A company spokesman said the accident was caused when one of the workers attempted to clear a blocked production line. CIL believes the accident may have been caused when a spark from a worker's hammer ignited the gas and caused a flash fire.

The propellant company is a 50-50 joint venture between CIL and TRW Inc., called Sabag Inc. It makes the propellant for passenger-side air bags in the Lincoln Town Car and Continental.

According to Ford Motor Co. production figures, approximately 4,000 cars a week are now being fitted with passenger-side bags that require the Sabag propellant.

A Ford spokesman said the company believes its supply of the passenger bags is adequate "for the foreseeable future," but said that a prolonged work stoppage at Sabag could temporarily interrupt deliveries of Continentals and Town Cars.

Last week's accident did not affect production at CIL's sodium azide plant in the same factory compound, the largest source of the chemical in the world.

CIL resumed production there earlier this month after two separate fires last fall forced it to suspend production for four months.

TRADE: *Mosbacher pushes U.S. automakers' agenda during Japan visit, encouraged by response*

By Mary Ann Maskery
AUTOMOTIVE NEWS STAFF REPORTER

TOKYO — U.S. Commerce Secretary Robert Mosbacher argued the case for U.S. automakers and suppliers in trade talks last week, and the response was the most encouraging to date.

He asked about dual dealerships, an issue proposed by Chrysler Motors, Ford Motor Co. and General Motors to promote import sales in Japan. The Japanese appeared receptive, according to Michael Skarzynski, the Commerce Department's assistant secretary for trade development. But Skarzynski said the Japanese companies wanted to see a product that would sell in Japan.

The U.S. trade delegation was also told that talks are progressing between Honda Motor Co. and Chrysler Motors over the proposed sale of Chrysler vehicles, including Jeeps, through Japanese Honda dealers.

Mosbacher

Furthermore, the Americans said they were told that the proposal was not a gratuitous gesture in response to trade friction, but that Honda wants to fill a niche in the Japanese market.

According to Skarzynski, Mosbacher also approached Mitsubishi Motors Corp. with a special request from Chrysler Corp. Chairman Lee Iacocca. Chrysler wants the next model developed for production at Diamond-Star Motors Corp. to be a Chrysler-engineered product, Skarzynski said. Mitsubishi, however, said the issue never came up.

Diamond-Star, a 50-50 joint venture between Mitsubishi and Chrysler in Illinois, currently builds Mitsubishi-developed vehicles sold by both companies.

Mosbacher also got promises of more effort to buy U.S. parts. Under the tutelage of the Ministry of International Trade and Industry, all Japanese automakers have been announcing import plans in the last six months. MITI has also been encouraging the companies to increase U.S. content of vehicles they build in the United States and to import more into Japan.

Most of the plans are broad enough to cover everything from wine to helicopters, but vague on parts.

The U.S. trade group said it expects some progress in that direction when a series of talks with Japan resumes this week.

Perhaps the most specific response from the automakers came during a meeting Mosbacher called to encourage Japanese firms to buy more U.S. semiconductors.

Toyota and Honda gave specific and positive responses, Skarzynski said. Toyota said it will switch 25 percent of its current purchases of multipurpose chips to U.S. makers. Honda said it now buys 1 percent of its semiconductors from U.S. makers but will increase to 4 percent in 1990 and 10 percent in 1991.

Corrections

- A story in the March 5 issue should have noted that Honda of America Manufacturing Inc.'s engine plant in Anna, Ohio, will not supply engines for North American-built Hondas that are exported overseas. The story also should have said that production at Honda's East Liberty, Ohio, assembly plant began in December.
- In the March 12 issue, the U.S. car sales by marketing units table included incorrect figures for 1990. The correct total is 1,478,757. A table with the correct figures is on Page 6.
- In another table in the March 12 issue, the domestic days' supply for the Ford Thunderbird as of March 1, 1990, should have been 78 days.

AUTOMOTIVE NEWS/JOE WILKINSON

Roy Roberts has been named general manufacturing manager for Cadillac.

COMING HOME

Roberts rejoins GM; Cadillac job to grow

By Michelle Krebs
AUTOMOTIVE NEWS STAFF REPORTER

DETROIT — Navistar executive Roy S. Roberts is rejoining General Motors in a lesser post than the one he left two years ago, but in a role that will grow increasingly important in the 1990s.

Last week, Roberts, 50, was named general manufacturing manager for Cadillac, effective April 1, after a 2-year stint as vice president and general manager of truck operations at Navistar International Corp. Roberts left GM as vice president of personnel and administration in August 1988 to take the Navistar post. He is one of only two blacks to be elected a GM vice president. The other was Otis Smith, who retired in 1984 as general counsel.

Roberts takes the Cadillac job at a time when the division is moving toward becoming a self-contained car company.

Cadillac is likely to gain even more control of its engineering and manufacturing operations in the 1990s, when it introduces a host of new products. The division has proposed that in 1992 it will move its high-volume DeVille and Fleetwood models from GM's Orion Township, Mich., plant to the Detroit-Hamtramck Assembly Center in Detroit, for which Cadillac now has responsibility. The Oldsmobile Toronado and Buick Riviera, now made at the Detroit-Hamtramck plant, will be moved to another plant.

The move toward autonomy, if approved by top GM management, would result in Cadillac having responsibility for engineering and manufacturing of all but one of its models. The Cadillac Brougham, with about 40,000 sales annually, would continue to be built at GM's Arlington, Texas, plant, and to be the responsibility of the Chevrolet-Pontiac-Canada Group.

In 1987, Cadillac regained control of engineering and manufacturing of most of its models in an effort to restore its image. Like other GM divisions, it lost engineering and manufacturing control under GM's 1984 corporate reorganization.

Cadillac officials — and independent analysts — credit much of the division's recent turnaround and market share gain to regaining control of its operations.

The addition of Cadillac models to the Detroit-Hamtramck plant will double output and require callback of the second shift.

As a result of the restructuring, pressure on the Detroit-Hamtramck plant to become more productive will increase. The plant initially was plagued with quality and production problems but has improved, according to J.D. Power & Associates surveys.

But the plant continues to trail nearly all other North American assembly plants in production efficiency, based on GM and independent consultant assessments.

Cadillac hopes in the next few years to gain market share and boost annual sales to 300,000-plus from the 267,000 expected this year in a market with even more competitors, including Lexus and Infiniti.

In his new job, Roberts will be responsible for all Cadillac manufacturing operations, including component operations in Detroit, a stamping plant in Grand Blanc, Mich., and assembly operations at the Detroit-Hamtramck plant and the Reatta Craft Centre in Lansing, Mich.

The return of Roberts to GM signals that one can go home again to GM. In the past, GM had refused to rehire employees who had left. That has changed in recent years.

J.C. "Jim" Perkins returned to GM, where he had spent 24 years, in January 1989. He was named to the newly created post of Chevrolet's assistant general manager. Last May, he succeed Robert Burger, who retired, as general manager.

Ford quick service outlets tested in U.S. and Canada

By Laura Clark
AUTOMOTIVE NEWS STAFF REPORTER

Ford Motor Co. is experimenting with satellite dealership service centers designed to make Ford and Lincoln-Mercury dealers more competitive with neighborhood "quick service" outlets by allowing them to own and operate their own service centers.

Ford Parts and Service insiders say different variations of the satellite service concept are being tested in markets in both the United States and Canada, and the move could change the way consumers service their cars and trucks in certain markets in both countries.

Ford's U.S. operations won't publicly comment on the satellite service experiments. Even members of L-M's U.S. dealer council are not aware of the pilot programs. Members of the Ford Division U.S. dealer council will meet at the end of March to talk about the satellite service center concept.

But some dealers are nervous about such an approach, believing that a crosstown competitor could steal service business with a satellite operation near another dealer's store.

"(Ford) is in unchartered waters; I don't think it will be successful unless the dealers themselves are involved in it," said Ed Mullane, president of the Ford Dealer Alliance, a forum of Ford dealers. Mullane said the satellite service concept may work if dealers cooperatively owned service locations in one market.

Ford has been considering a wide range of possibilities to increase both its Consumer Satisfaction Index ratings and service capacity in its dealerships. Ford officials have said that service CSI scores — especially for Ford Division — have not been as high as the company would like. A big factor in the low scores has been that the number of service bays in dealerships have not increased as fast as Ford's market share in recent years, according to Ford officials.

At the same time, the number of quick service outlets such as Jiffy Lube, Precision Tune and Sparks Tune-Up have increased. Several Ford stores have built quick oil change facilities in their service departments. But more complex maintenance items often require leaving the car for long periods of time because of the limited number of service bays and technicians.

"In some cities, people have to wait three weeks for a front-end alignment (at a Ford dealership)," said one Ford Parts and Service executive.

This is the second time Ford has ventured into satellite service facil-

Makers rush to East Germany

GM, Mercedes, VW sign deals

By Richard Johnson
AUTOMOTIVE NEWS STAFF REPORTER

LEIPZIG, East Germany — The entire East German car and truck industries were transformed last week as General Motors, Volkswagen AG and Mercedes-Benz AG reached agreements to virtually annex local manufacturers.

GM's Adam Opel AG said it expects to take majority control of Automobile Works Eisenach, maker of the Wartburg; VW announced a joint production agreement with VEB IFA Kombinat Personenkraftwagen, manufacturer of the Trabant in Zwickau; and Mercedes-Benz signed a memorandum of understanding for development, production and sales links with the East German truck monopoly, VEB IFA Kombinat Nutzkraftwagen.

The East German moves are figured to have a major impact on the Western European car and truck industries. For instance, new low-cost production sources could curb the rush to Europe's "sun belt" — Spain and Portugal — and provide much-needed capacity for Western Europe.

But many Western auto executives think the East will demand more capacity than will be installed.

Indeed, all three Western companies say the main reason to set up in East Germany — where 70 percent of the flow of trade is eastward — is to establish a sales base there and markets further east, including the Soviet Union. East German manufacturers — particularly the IFA truck monopoly — also have strong markets in several developing countries.

Competition for East German ties has been intense. IFA Kombinat Nutzkraftwagen General Director Lothar Heinzmann said talks were also held with Fiat's IVECO commercial vehicles unit and West Germany's MAN AG. VW and Japan's Mitsubishi Motors Corp. were the closest competitors for Opel at Wartburg.

Financial details for all three joint ventures await further negotiations and East German commercial law reforms expected to follow yesterday's elections.

Adam Opel, GM's West German subsidiary, signed an agreement here with Automobile Works Eisenach, establishing a joint venture company, Opel-AWE GmbH, in Eisenach. Opel said it will take a majority holding in the firm, which will now plan assembly of up to 150,000 passenger cars annually from the Opel range as well as component production.

East Europe, Soviet Union in Chrysler planning book

By Richard Johnson
AUTOMOTIVE NEWS STAFF REPORTER

GRAZ, Austria — Chrysler Corp. officials confirmed that the company is discussing Jeep and van production ventures with manufacturers in the Soviet Union, and is particularly enthusiastic about gaining a foothold in Eastern Europe with Jeep.

"We've had a couple of teams in Moscow for over a year now," said Chrysler Chairman Lee Iacocca. "But it's going to take a while."

Chrysler signs pact on vans Page 45

Iacocca said that new low-cost, modular production methods that Chrysler says it will employ to build the forthcoming JJ sport-utility would be well-suited to Eastern countries.

"We're keeping the costs down," said Iacocca, who was in Austria to sign an agreement to build minivans. Jeeps are "rugged vehicles, so they might be the right kind of entry vehicles in Eastern Europe."

Chrysler is also understood to have talked with the Soviets about licensing a long-wheelbase version of the Chrysler Voyager minivan.

Michael Hammes, vice president for international operations, said Chrysler has looked at Jeep and van projects in Moscow. "But we have not finalized anything at all, and I don't think anything is close to being finalized," Hammes said. "Those have really been exploratory discussions."

Hammes confirmed talks with the Soviets' RAF plant in Latvia and with the Ulianovsk Automobile Factory in the Russian Soviet Socialist Republic, but said no agreements are imminent.

"We've looked at both factories, and we've had good discussions," Hammes said. "But they've been just that, discussions."

Soviet auto industry officials told *Automotive News* in December that Chrysler may offer a Jeep design as a replacement for an aging 4-wheel-drive, canvas-topped off-road vehicle known as the UAZ-469B. The 159-inch long 469B, which rides on a 94-inch wheelbase, has been in production since 1972.

The Ulianovsk Automobile Factory, which is used by the Soviet military, has been exported to several markets, including Italy, where it receives Western powerplants.

Chrysler and RAF have discussed replacement of the Latvian plant's 11-passenger van with a lengthened version of the Chrysler minivan, RAF officials have said. But Valentin P. Morozov, the Soviet first deputy minister of automobile and agricultural machine building, has said he was "quite pessimistic" about the RAF talks.

Meanwhile, Peugeot officials last week confirmed preliminary contacts with the Soviets about possible assembly of its new 605 luxury car under license in the Soviet Union. The deal is believed to involve the Gorkovsk Automobile Factory in Gorki, where Ford Motor Co. had negotiated unsuccessfully to put its European Scorpio into production.

Hans-Jorg Hungerland has made dramatic changes at Volkswagen and Audi since becoming head of the German car importers' American operations last year.

HUNGERLAND

Dealers applaud new VWoA boss, but sales revival is slow

By Dutch Mandel
AUTOMOTIVE NEWS STAFF REPORTER

TROY, Mich. — It has been little more than a year since Hans-Jorg Hungerland took the helm of Volkswagen of America Inc., and in that time things have changed dramatically for the German car importer.

Volkswagen and Audi dealers should have known something was afoot last winter.

With little fanfare, Hungerland and William J. Young ventured across the country from dealership to dealership. In 19 days, they visited 18 cities and talked with 170 dealers, big and small.

Hungerland and Young were missionaries, laying out VW's and Audi's new ideology and building a foundation for a company they hoped to revitalize.

An odd thing, perhaps, for two businessmen not officially on the VW payroll.

But it was not altruism that fueled them — it was, as Hungerland calls it, "an excellent and natural exercise." Armed with first-hand dealer knowledge, Hungerland took over as VW's chief executive officer and president in charge of VW and Audi, and Young as vice president of Volkswagen United States Inc. shortly after that trip.

The words they passed on to the dealers were communication and cooperation.

A little more than a year after Hungerland took over, VW and Audi have rejuvenated and enthusiastic dealer bodies, a brace of new product and revolutionary marketing plans.

That may just be what they need to get sales moving. Still, if VW and Audi undergo a sales about-face in the U.S. market, much of the credit will go to Hungerland's communication and cooperation credo.

But the personable, energetic and self-effacing 48-year-old German native would likely shun that accolade. Instead, he'd point to the dealer networks, to those who work for the company, to Young and to Richard Mugg, vice president of Audi.

And the pointing would come back to Hungerland.

Hungerland has a ways to go before he must worry about how

Owners' council tells Audi to leave 'Alternate Route'

By Dutch Mandel
AUTOMOTIVE NEWS STAFF REPORTER

TROY, Mich. — The Audi Owners Advisory Council says Audi should aggressively promote its cars' engineering, high technology and safety attributes and abandon its ambiguous "Alternate Route" advertising theme.

Also, the council — believed to be the only auto owner focus group to meet regularly — cares little for Audi's Coupe Quattro; it feels Audi dealers should organize social get-togethers and test drives for new owners; and it approves of Audi's promotion of safety.

Audi officials are listening. At a meeting of the company's top marketing managers this week, Richard Mugg, vice president of Audi of America, will ask for an assessment of the "Alternate Route" theme to see if it is telling Audi's story effectively.

"I think we would be stupid not to think about what they were telling us," Mugg said. "In discussing (Audi's) promotion, they loved the 'Art of Engineering' theme and didn't understand 'The Alternate Route.' We have the

Big 3 sales sputter; transplants up sharply

By Mary Connelly
AUTOMOTIVE NEWS STAFF REPORTER

Early March was a downer for the Big 3 as their sales of U.S.-built cars and light trucks fell 6.56 percent from the year-earlier total.

But the Japanese transplants chalked up an increase of 45.18 percent for the period.

Combined sales of cars and light trucks for March 1-10 were 268,871, down 3.54 percent from 1989.

Sales rose in January but dropped in February. The decline continued in early March, with sales of U.S-built cars falling 2.91 percent and sales of U.S.-built trucks off 4.53 percent from 1989. Both periods had nine selling days.

Each of the Big 3 lost ground in both cars and trucks. All the Japanese transplants posted gains.

Domestic car sales fell 7.15 percent at General Motors, 6.91 percent at Ford Motor Co. and 9.12 percent at Chrysler Corp. Domestic light-truck sales declined 3.12 percent at GM, 3.07 percent at Ford and 13.39 percent at Chrysler.

Car sales climbed 1.76 percent at Honda, 53.52 percent at Mazda, 157.34 percent at Mitsubishi, 17.39 percent at Nissan and 267.41 percent at Toyota. Nissan's truck sales were up 25.07 percent.

The car and light-truck daily selling rate was 29,875 units, compared to 30,970 in 1989.

U.S. groups excluded from Volvo, Renault director swap

By Jim Henry
AUTOMOTIVE NEWS STAFF REPORTER

NEW YORK — AB Volvo's proposed joint venture with Renault will cause some "director-swapping" between the parent companies and their subsidiaries — but not those in the United States.

As part of the deal's 45 percent equity swap between heavy-truck units Renault Vehicles Industriels and Volvo Truck Corp., each partner will nominate two directors to sit on the board of the other's truck business, said Elios Pascual, executive vice president of planning and administration for Renault Vehicles Industriels.

Navistar, Paccar eye Mack, Page 16

There also will be some director swapping at the parent companies, although the number of directors hasn't been disclosed.

In the United States, Renault owns 45.6 percent of Mack Trucks Inc. and Volvo owns 76 percent of Volvo GM Heavy Truck Corp.

But there will be no Volvo GM members on the Mack Trucks board, nor any Renault/Mack members on the Volvo GM board, Pascual said in an interview last week.

Pascual is a Mack Truck board member.

The French and Swedish automakers announced last month that Volvo would acquire 20 percent of Regie Nationale des Usines Renault as well as the 45 percent stake in Renault's truck group. Renault will take 10 percent of AB Volvo and 25 percent of Volvo Car Corp. in addition to the 45 percent share of Volvo Truck.

The announcement touched off speculation that Volvo and Renault may merge the U.S. truck operations, but officials of both companies said there will be no mixing of products or dealers.

Bjorn Ahlstrom, president and chief executive officer of Volvo North America Corp., said in a separate interview that the partnership is aimed foremost at saving money by eliminating redundant research and development costs. The venture will also combine the buying power of the two industrial groups.

"Now we can talk millions of cars, millions of transmissions, millions of air conditioning systems," Ahlstrom said. "Now we can play with the big guys. Doing that will hopefully benefit our numbers."

Operating income for AB Volvo fell 31 percent in 1989 to approximately $784.5 million.

Operating income in the car sector fell 46 percent from 1988 levels, to about $315.6 million.

AB Volvo officials blamed the lower profits on high costs in Sweden combined with weak growth in productivity, as well as research and development costs, most of which were charged to the auto sector.

Research and development costs were about $1 billion, a 20 percent increase from 1988 and the highest year-to-year increase in five years.

AUTOMOTIVE NEWS-JOE WILSEMS

Ahlstrom: Joint venture to cut costs.

Mack says Renault spurned feelers by Navistar, Paccar

By Joseph Bohn
AUTOMOTIVE NEWS STAFF REPORTER

TROY, Mich. — Mack Trucks Inc. has been a tempting acquisition target for a couple of major U.S. truck manufacturers who visited Renault Vehicules Industriel officials to explore the possibility.

But Renault never seriously considered relinquishing its large stake in Mack, according to Ralph Reins, Mack chairman and chief executive officer.

And Renault's decision to provide $500 million worth of convertible subordinated loans to Mack and its deal with AB Volvo have cemented Renault's ties to Mack.

During the past several months, the strongest reports in the heavy-truck industry have been of a potential takeover of Mack by Navistar International Corp. of Chicago.

Sources close to Navistar noted that James C. Cotting, chairman, president and chief executive officer of Navistar International Corp., and Neil Springer, chairman, president and chief executive officer of Navistar International Transportation Corp., had made a couple trips to Europe and expressed their interest in a deal with Renault involving Mack.

The two companies were considered a good fit for many reasons, including Navistar's strength in the over-the-road market and Mack's strength in construction, where Navistar is weak.

Navistar was also interested in getting a foothold in Europe through a deal with Renault, prior to unification of the European Community in 1992.

Reins confirmed that not only Navistar's top officials but Charles M. Pigott, chairman of Paccar Inc. of Bellevue, Wash., had visited Renault, expressing interest.

"Certainly, Cotting and Piggot expressed some interest in purchasing Mack," Reins said, adding that Renault, with 45.6 percent of Mack's stock and options to purchase up to 60 percent, never really took the conversations seriously.

"They (Navistar and Paccar officials) weren't talking to Raymond Levy," the chairman and chief executive officer of Regie Nationale de Usines Renault, Reins said.

"They were talking to an official who came out of the government and was exploring, from a French government standpoint, various options and was looking at the future of the French investment and privatization of various businesses," Reins added.

"There were a number of people looking at different things. There was a 'Let's fish the market and see what's going on' attitude, and anybody who expressed any formal interest (in Mack) was listened to," added Reins, discounting the seriousness of the overtures.

He said a Navistar-Mack or Paccar-Mack merger could never get past antitrust regulations in the United States any more than a Mack-Volvo GM Heavy Truck Corp. merger could.

"You wouldn't get approved because you'd create a new No. 1" heavy-truck manufacturer, Reins said. "You can create a new No. 2 or a new No. 3, but you can't create a new No. 1 as part of an amalgamation.

"Forget the combinations; forget the nameplates. That's the (antitrust) rule. That's the way the game would be played because the others (truck competitors) would quickly voice their dissent, and there would be problems," he said.

Paccar, with its Kenworth Truck Co. in Kirkland, Wash., and its Peterbilt Motors Co. in Newark, Calif., overtook Navistar as the top Class 8 heavy-truck retailer for the first time last year.

According to R.L. Polk & Co. registrations, Paccar captured 24.5 percent of Class 8 compared to Navistar's 21.5 percent.

Elios Pascual, executive vice president of Renault and a member of Mack's board, said flatly that there will be no merger of Mack and Volvo GM in the United States, now or in the future.

"We are putting in a file with the Securities and Exchange Commission, saying we have no intention of changing anything in the ownership of Mack. We definitely have no changes (planned) in the future, too," Pascual added.

Rockwell spends big to expand international automotive business

By Joseph Bohn
AUTOMOTIVE NEWS STAFF REPORTER

DETROIT — Rockwell International Corp. has been expanding its Automotive Body and Chassis Systems business internationally.

The company pumped $130 million into sunroof operations, plastic parts and assemblies, suspension systems and its steel wheel business between 1988 and 1990 to capitalize on burgeoning worldwide automotive markets.

William F. Rebone Jr., president of Automotive Body and Chassis Systems, said the investments have increased sales volume, added new technology, expanded product lines and increased the firm's ability to provide "concept-to-delivery" service to customers.

Rebone, speaking at an SAE conference, said he remains bullish about the North American car market in the 1990s.

Rockwell has 25 production locations worldwide, compared to 19 at the end of 1988, he added. He said more plants "probably" will be established in the near future.

Rockwell's investments have moved it from a contract manufacturer to a systems-oriented supplier, capable of handling design, engineering and prototyping requirements in all its body systems.

The investments included $40 million for installing two system module plants in Europe.

Rockwell also invested more than $60 million to expand its North American plastics capability. That includes acquisition of Butler Polymet.

Rockwell is also expanding its suspension products business and has supply agreements with every North American automaker.

SALES

FROM PAGE 1

and light trucks included in the *Automotive News* study.

Toyota dipped to 817 car/truck sales per outlet from 850 in 1988, and Honda fell to 677 from 691. Third-place Ford averaged 639 new-vehicle deliveries per franchise last year, down from 669 in 1988. Nissan was one of 10 makes that bucked the trend. Its average car/truck sales per dealership rose to 596 in 1989 from 579 a year earlier on a 12.3 percent surge in unit sales.

Other makes showing gains were Volvo, Isuzu, Volkswagen, GMC, Lincoln, Range Rover, Daihatsu, Peugeot and Rolls-Royce/Bentley. Of the 10 gainers, only Nissan, Volvo and Range Rover were up more than five sales per outlet.

Suzuki had the greatest decline in car/truck sales per location, sinking to 127 in 1989 from 241 a year earlier.

Suzuki's car sales rose from its partial-year total in 1988, but sales of its 2-door Samurai sport-utility fell 58 percent, due at least partially to the 25 percent tariff on such imports.

Six Japanese makes, three domestic makes and one Korean nameplate made up the Top 10 in car/truck sales per outlet.

Ford crept up to third place from fourth in 1988. Chevrolet rose to sixth from seventh, and Dodge remained in 10th place.

Imports also captured eight of the 10 top spots for car sales per outlet in 1989. Six of the top 10 makes were Japanese, one was Korean, two were domestic and the other was European.

The domestics were seventh-place Ford and ninth-place Chevrolet.

Five of the top six were Japanese: Honda, Toyota, Acura, Nissan and Mitsubishi. Fourth-place Hyundai was the only exception.

Honda's Acura Division made the top 10 list without a transplant.

Trucks beefed up sales for domestic dealers again in 1989.

The domestic light-truck market was down about 3 percent in 1989, while sales of domestic cars fell 9 percent. At Dodge, for example, about 55 percent of dealer sales per outlet were trucks (including minivans). The breakout was 148 cars and 181 trucks.

Car and truck sales per outlet were almost evenly divided at Ford and Chevrolet. At Ford, the score was 331 cars and 308 trucks for a 52-48 percent ratio. At Chevrolet, the totals were 281 cars and 270 trucks for 51-49 percent.

And yet, sales for dealers of Japanese imports tilted significantly toward cars. Toyota's car sales were 76 percent of its sales per dealership; Nissan's, 77 percent; Mitsubishi's, 74 percent; and Mazda's 77 percent.

CAR-TRUCK SALES PER OUTLET

Final 1989	1989	1988
1. Toyota	817	850
2. Honda	677	691

Ford's full-sized, rear-wheel-drive wagons have been a favorite of boaters and campers, but the automaker will not offer a big wagon after the 1991 model year.

WAGONS

FROM PAGE 1

percentage. Market studies showed people opted for the Taurus/Sable wagons, not because they were in the market specifically for a wagon, but because they liked the look of the Taurus/Sable wagons.

"When you consider how few new entries there have been and how little has been done in the redesign of wagons, it's remarkable sales held up at all," said Ron Cieslak, a Buick marketing manager. "It really tells you that there is a basic ongoing need that is being satisfied, and people want wagons in spite of the fact that the styling hasn't been freshened."

This fall, GM will introduce its redesigned full-sized, rear-wheel-drive wagons. The Chevrolet Caprice, Oldsmobile Custom Cruiser and Buick Estate wagons were redesigned in the 1977 model year and restyled in the 1981 model year.

In addition to revamping its full-sized wagons, GM will redesign its mid-sized Buick Century and Oldsmobile Cutlass Ciera wagons in 1993. It also is considering where to go with small wagons. GM's Saturn Corp. is contemplating a small wagon.

GM expects to capitalize on the full-sized wagon market with the redesign of the line as well as Ford's decision to abandon that market segment.

Ford will build its last rwd Crown Victoria and Grand Marquis in 1991. Ford said it has opted to put its resources into existing and future van products and will fill the niche left by the large wagons with those products. Competitors suspect that when Ford redesigns the Taurus/Sable, it will produce a stretched version to fill the gap left by the departure of the large wagons. Ford has wagons in its redesigned Ford Escort/Mercury Tracer lines. Escort goes on sale April 26; Tracer, a month or so later.

Chrysler has no plans to return to the wagon market — the company will pump its resources into the minivan segment.

GM's research shows underlying strength remains in the full-sized wagon segment. Oldsmobile forecasts industry sales of 250,000 to 280,000 units annually for full-sized wagons and about 180,000 annually for mid-sized wagons throughout the 1990s.

Research by a number of automakers indicates that the vast majority of minivan buyers — expected to peak at just over a million units in the next couple years — didn't trade their wagons for vans. Rather, they traded their coupes and sedans — as well as trucks — for minivans.

GM and Ford studies show about 30 to 35 percent of the minivan buyers trade in another van, a truck or sport-utility. GM's research showed only 17 percent of minivan buyers in 1988 previously owned station wagons. Another 28 percent previously owned sedans, and 25 percent owned coupes.

Part of the reason is that wagons make up less than 6 percent of the total car market. But studies by automakers also define station wagon owners as different animals than van owners.

Minivan sales are concentrated in the 35 to 50 age range, with most having young families, according to GM and Ford studies. Station wagon sales span a broader age spectrum. Income of wagon owners, on average, is higher than that of minivan owners. They are a loyal lot, who often buy the same kind of wagon when they purchase a new vehicle. And 20 to 30 percent of wagon owners, depending on the size of the vehicle, are fleet buyers. Automakers expect the fleet market for wagons to continue at that pace.

Joel Pitcoff, Ford's sales analyst, said a study of minivan sales compared to Taurus wagon sales showed 48 percent of minivan sales were to 35- to 49-year-olds. Taurus buyers were fairly evenly distributed across the age spectrum, with a quarter of them over 65. Similarly, Buick found a bulk of its wagon owners were retired empty nesters.

"Despite the fact that vans and trucks are becoming more car-like, wagon owners still like wagons," said Buick's Cieslak.

Oldsmobile asked its wagon owners why they picked a wagon over a van or multipurpose vehicle. The No. 1 reason was safety; owners noted that minivans meet the less-stringent standards for trucks. Other reasons included the ride, handling and comfort characteristics that a car offers over a truck.

Buick gathered some of its wagon owners to view GM's new all-purpose vehicles, sold as the Chevrolet Lumina APV, Pontiac Trans Sport and Oldsmobile Silhouette. Only a small percentage said they would replace their wagons with the vans.

Likewise, a Ford study of Taurus/Sable wagon owners found that if the Taurus and Sable wagons were no longer available, owners wouldn't choose a van. Instead, they would seek out a station wagon they viewed as similar to the Taurus/Sable.

GM and Ford aren't alone in their interest in the station wagon market. Asian automakers and European makes have aggressive product plans for station wagons in the 1990s.

"It almost appears that the Asians believe there is more potential in the wagon market than the van market," said J.D. Power's Christopher Cedergren. "Their 1995-96 product plans don't look as aggressive in the compact van markets as we once believed."

> "Despite the fact that vans and trucks are becoming more car-like, wagon owners still like wagons."
>
> **Ron Cieslak**
> Buick marketing manager

Cedergren said the number of van entries from Japanese automakers will increase in the next five years, but not as much as they had planned two years ago.

Honda, for example, had considered production of a minivan built on the Accord platform. Those plans are shelved at least until the middle of the decade.

Instead, Honda will introduce an Accord wagon for 1991. Honda's plant in Marysville, Ohio, will produce about 50,000 wagons a year beginning this fall.

Likewise, Mazda plans a station wagon based on its 626 model for 1992. Mitsubishi plans a CZL high wagon, based on the Galant, as early as spring of 1991. A shorter-wheelbase version will be sold through Chrysler Corp. to replace the Dodge Colt/Plymouth Vista. Toyota will redesign its Camry wagon for the 1992 model year and produce in Kentucky.

European makes, the popular choices of free-spending yuppies in the 1980s, plan to stay strong in the wagon segment. Of the Europeans, Volvo has performed best in the station wagon market. In the past 10 years, Volvo has increased its wagon offerings from two to six models and has doubled its sales to more than 30,000 units annually.

Mercedes-Benz wagon sales have edged upward, and the company expects its stranglehold on the luxury end of the market to continue through the 1990s.

Meanwhile, Audi is considering a wagon version of its 80/90 series. And industry observers speculate that BMW eventually will sell a wagon version of its next-generation 5 series in the United States.

While wagons could make a comeback, the models of the 1990s won't be like those of 1950s, the 1960s or even the 1970s. The clunky wagon of yesteryear will give way to a more aerodynamic shape in the 1990s. The sloppy handling and soft ride of previous wagons will be replaced — in many cases, by a sporty, performance-oriented version to appeal to yuppies who owned Euro-sedans and sports coupes in the 1980s. Bare-bones versions will be replaced by luxury models with all the amenities of their sedan counterparts.

And the 1990s will see a proliferation of a version of station wagon that didn't exist before the 1980s. More "tall" wagons, or wagon/van hybrids, will be introduced in the coming years, market researchers say.

"Maturing baby boomers will be growing older and making more money," said Cedergren. "They'll need family oriented transportation but don't want to give up the performance, styling and luxury."

Dealer, buyer incentives adjusted

Oldsmobile, Peugeot, Hyundai and Nissan offer varied lures

By Arlena Sawyers
AUTOMOTIVE NEWS STARR REPORTER

Four manufacturers adjusted their retail and dealer incentive programs last week.

Oldsmobile announced a $1,500 factory-to-customer rebate on 1990 Toronado and Trofeo models which runs until Sept. 26. In lieu of rebates, customers may choose the special 6.9 percent finance rate for contracts up to 48 months or 10.9 percent for 49- to 60-month contracts.

Also, Oldsmobile dealers can earn additional cash if they meet their factory-set sales quotas in February, March and April. Dealers who met their quota in February earned $750 per unit; those who meet their March objective will earn $1,000; and those who make their April goal will receive $1,250. Cash payments are retroactive to the first vehicle sold. All Oldsmobile vehicles except the Silhouette are counted toward the objective.

Peugeot Motors of America Inc. is offering retail incentives of $3,000 on 1989 405 and 505 sedans; $1,700 on 1989 505 wagons; and $1,000 on the 1990 405 Sports Wagon. The Peugeot program runs indefinitely.

Hyundai Motor America is paying its customers cash rebates of $750 when they purchase the 1990 Excel GL and GS and $1,000 for the 1990 Excel GLS. Hyundai's program expires April 3.

Nissan Motor Corp. in U.S.A. announced several changes Friday. The $1,000 dealer incentive on 1989 Pulsar NX expired March 2. Nissan is offering dealers the following: 1988 and 1989 Sentra non-standard models, $1,250; 1990 Sentra non-standard models, $1,000; 1988 and 1989 Hardbody, non-base 4x2 and all 4x4 models, $1,500; and 1990 Hardbody, non-base 4x2 and all 4x4 models, $1,200.

Under another program, Nissan is offering dealers cash on sales of the 1988, 1989 and 1990 Stanza. Dealers earn $500 on the first unit, $750 on the second unit and $1,000 for the third unit and above. Nissan's program expires May. 2.

CLEAN AIR

FROM PAGE 2

auto industry. Opening arguments were heard last week, and members promised to offer alternative-fuel amendments.

The draft — which environmentalists charge was written by carmakers — demands less of the industry because it would only require them to certify they can produce, distribute and offer to sell alternative-fueled vehicles.

An earlier proposal would have actually required sales.

But Rep. Henry Waxman, a California Democrat and ardent environmentalist, is expected to back an alternative-fuels amendment that is "almost a parallel of" the Wirth-Wilson amendment, according to Robert G. Liberatore, Chrysler Corp.'s executive director for public policy and legislative affairs.

Environmental groups have been resurrecting industry arguments from the 1970s — when carmakers said they couldn't reach standards that were later met.

"The auto and oil industries are once again trying to scare the Senate with recycled horror stories about the alleged impossibility of meeting these critical environmental protection provisions," the Sierra Club said in a flier.

The group backs the Wirth-Wilson alternative-fuels program, which it says will not only "clean up cities" but will benefit the natural gas industry and farmers who sell corn to ethanol producers.

Voices for dealers and the industry counter by saying alternative-fuel technology is unproven. They warn that performance problems, inconvenience and more costly fuel may scare potential buyers and leave dealers stuck with unsold cars.

The dealers and the industry added that if alternative-fueled vehicles are mandated, they should be accompanied by programs that will stimulate consumer demand.

Honda backing unique

Honda has set its sights on a true market niche: women who participate in grass-roots racing.

American Honda Motor Co. Inc. announced its sponsorship of the Women's Pro Solo Championship for 1990 — the only major for-women-only auto racing series in the United States. Sponsorship is estimated to cost Honda as little as $10,000.

PRODUCTION

Truck build drops 3%; cars steady

By Karen Datkowski
SPECIAL CORRESPONDENT

Last week's targeted domestic auto production totaled 135,690, down 0.47 percent from the prior week and 11.07 percent below the year-ago week.

So far this year, 1,167,689 cars have been assembled, 29.00 percent below last year's total at this point.

Last week's scheduled auto output was divided as follows: General Motors, 42.64 percent; Ford Motor Co., 25.13 percent; Chrysler Motors, 11.50 percent; Honda of America Manufacturing Inc., 6.75 percent; Toyota Motor Manufacturing U.S.A. Inc., 3.28 percent; Mazda Motor Manufacturing (USA) Corp., 3.42 percent; New United Motor Manufacturing Inc., 3.02 percent; Diamond-Star Motors Corp., 2.17 percent; Nissan Motor Manufacturing Corp. U.S.A., 1.75 percent; and Subaru-Isuzu Automotive Inc., 0.34 percent.

Scheduled truck output was 85,690 units last week, 3.02 percent below the previous week and 11.30 percent below the year-ago week.

Year-to-date, 772,519 trucks have been built, 23.42 percent below 1989. Truckmakers are some three weeks behind last year's pace when the millionth truck was built March 18.

GM slated Friday overtime at its Janesville, Wis., plant and Saturday overtime for the A-line at its Lansing, Mich., plant last week. The A-line assembles the Buick Skylark and the Oldsmobile Cutlass Calais.

GM's Wentzville, Mo., plant remains closed until March 26 for changeover to the 1991 Buick Park Avenue.

GM's Detroit truck facility was down last week for inventory adjustment. The plant produces commercial, recreational and specialty vehicle chassis and is scheduled to resume operations today.

Chrysler's Grand Wagoneer line in St. Louis was down last week and will be closed this week to adjust inventories. Operations are expected to resume March 26.

Ford scheduled the following car plants for daily overtime last week: Wayne, Mich.; Wixom, Mich.; Atlanta; and Chicago.

Also working daily overtime last week were Ford's St. Louis and St. Paul, Minn., truck facilities.

Canadian cars move ahead 8%

Last week's scheduled Canadian car production of 27,441 increased 7.95 percent over the previous week and 34.47 percent above the year-ago week.

So far this year, 210,534 cars have been produced, 2.07 percent below last year's total at this point. Truckmakers targeted last week's production at 20,299, 0.28 percent above the prior week and 19.17 percent over the year-ago week.

Year-to-date, 187,123 trucks have been built, 17.36 percent below 1989's build at this point.

Saturday overtime was scheduled at GM's Oshawa, Ontario, truck facility last week.

Fuji loss escalates; U.S. a major factor as Legacy struggles

By Mary Ann Maskery
AUTOMOTIVE NEWS STAFF REPORTER

TOKYO — Fuji Heavy Industries Ltd.'s admission that it will lose 23 billion yen ($148 million) on operations in the fiscal year that ends this week has raised serious questions about the future of the Japanese automaker.

Subarus pile up in Indiana, Page 51

Fuji acknowledged earlier this month that it was deeper in operating red ink than anyone had expected. Not only is Fuji the only Japanese automaker failing to make money on its car business, it's doing so in one of the Japanese industry's strongest years ever.

Analysts are now wondering how long it will be before Nissan Motor Co., which owns 4.5 percent of Fuji, launches a rescue mission. While some analysts praise the vitality of the Japanese industry because of the competition among nine automakers, others have predicted that nine cannot survive in open global competition.

Ford sees Europe market growing to 23 million

By Daniel Ward
STAFF CORRESPONDENT

LONDON — Swelled by Eastern European markets, total new-car sales in Europe may be almost twice as high as sales in the United States by 2008.

Eastern European countries will account for 7 million new-car sales by 2008, according to the latest forecast by Ford of Europe executives.

With Western Europe's projected 16 million, European new-car demand will reach 23 million annually, Ford estimates.

By contrast, Ford expects U.S. new-car sales to rise to 13 million over the same period.

Ford would need a new plant capable of producing 200,000 cars a year in Eastern Europe if it wants a modest 5 percent of the annual market of 3.2 million to 3.8 million cars forecast for 1998.

Bruce Blythe, vice president of business strategy at Ford of Europe, told *Automotive News*, "The forecast for the year 2008 means a 300 percent growth rate. You can't ignore that sort of growth rate."

> "The forecast for the year 2008 means a 300 percent growth rate. You can't ignore that sort of growth rate."
>
> **Bruce Blythe**
> Ford of Europe

Ford estimates the Soviet Union will account for 4 million to 5 million of the 6.5 million to 3 million new-car market in the East in 18 years.

Blythe said he was not concerned that Ford has yet to sign a collaborative agreement in Eastern Europe, despite the fast-footed moves by General Motors' Adam Opel AG subsidiary, Volkswagen AG and Mercedes-Benz AG in East Germany.

Ford's approach to Eastern Europe is likely to be pragmatic, leading in the longer term to a car production plant that would have equal status with the company's six current assembly plants in Western Europe.

For that reason, a collaborative venture is not favored. Blythe said he believes the very real problem of hard currency means Ford must be prepared to export cars and components to the West. That can be considered only when quality standards are high enough.

Blythe favors making a modest investment, initially to establish a components plant. He believes Ford should then progress to a production plant for knock-down kits before moving to an assembly plant.

No air bags for passengers; Ford stores 3,000 Lincolns

By Laura Clark
AUTOMOTIVE NEWS STAFF REPORTER

After two costly supplier snags last fall, Ford Motor Co. was zapped again by a fire at an air-bag propellant plant.

Ford was forced to store 3,000 of its hot-selling Lincoln Town Cars and Continentals at its Wixom, Mich., assembly plant and a Detroit site because they could not be fitted with passenger-side air bags.

Ford began changing the interiors of the stored cars and production-run cars last weekend to inform consumers that they do not have the passenger-side bag.

Ford hopes to retrofit the cars with passenger-side air bags when the propellant supplier, Sabag Inc. of McMasterville, Quebec, resumes production. Ford said the retrofit program will be carried out by dealers.

Ford spokesman Jim McCraw said Ford is waiting for Sabag to determine the cause of the March 14 fire and explosion and resume production. Canadian government and Sabag officials are investigating the blast, the third at the plant in six months.

Driver- and passenger-side air bags are standard equipment in Town Cars and Continentals. The Sabag fire does not affect the installation of the driver-side air bag. The driver- and passenger-side air bags use a different propellant, and it cannot be interchanged, according to a TRW Inc. spokesman.

Sabag is a joint venture between

NADA President Ray Green: "GM is listening to its dealers."

GM, dealers call truce on Delco outlets

By Francis J. Gawronski
AUTOMOTIVE NEWS STAFF REPORTER

DETROIT — Because of stiff opposition from its dealers, General Motors has temporarily stopped expanding its network of certified independent service outlets.

GM won't appoint new Delco Tech Service Centers for at least 18 months while it studies whether the centers hurt franchised dealers.

Since the program started in May 1987, GM Service Parts Operations has authorized 850 Delco Tech centers, most of which are operational within AC-Delco retail outlets, to service GM cars after the new-car warranty has expired. AC-Delco is a wholesale activity of the parts operation.

The dealers view certification as a threat to the new-car franchise's service business.

The moratorium on new shops

Curry tags trucks, side impact as NHTSA priorities

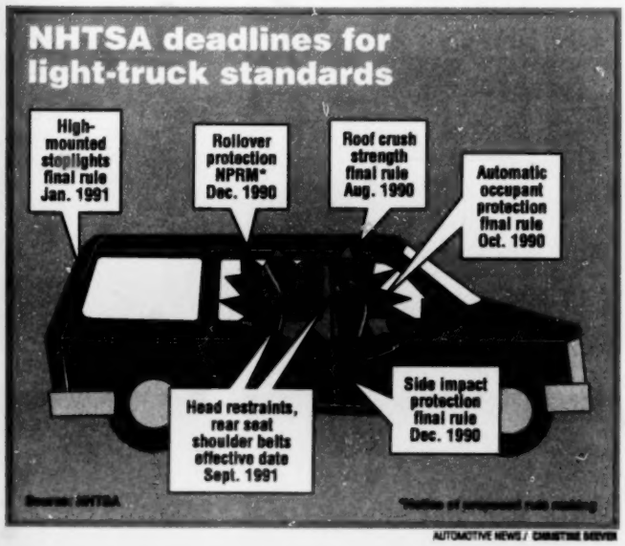
By Jack Keebler
AUTOMOTIVE NEWS STAFF REPORTER

DETROIT — The painful job of assigning priorities to transportation safety problems — based on lives lost — is essentially over, according to retired U.S. Army Gen. Jerry Curry, new administrator of the National Highway Traffic Safety Administration.

Curry said the next step is to get feedback from law-enforcement officers, members of state and local judicial groups and the private sector.

Curry last Monday told *Automotive News* that the safety areas he plans to attack first provide an action timetable for the near future.

He shared the timetable and targeted safety concerns with the auto companies last Wednesday. Tomorrow, he meets with consumer groups.



NHTSA deadlines for light-truck standards
High-mounted stoplights final rule Jan. 1991
Rollover protection NPRM* Dec. 1990
Roof crush strength final rule Aug. 1990
Automatic occupant protection final rule Oct. 1990
Head restraints, rear seat shoulder belts effective date Sept. 1991
Side impact protection final rule Dec. 1990
Source: NHTSA
*Notice of proposed rule making
AUTOMOTIVE NEWS / CHRISTINE SEIVER

High on the list of concerns for this year are standards for passenger-car side impact, light-truck side impact, light-truck passive restraints, light-truck high-mounted stoplights, light-truck rollover, child-seat testing and school bus safety features.

Curry

Curry also said he recognized the fuel-economy burden that comes with increased vehicle safety. He noted that the additional structure required for better side-impact protection and the additional hardware associated with anti-lock brakes and air bags add significant weight, which reduces fuel economy. He said that is one reason NHTSA will not push for large fuel economy improvements.

Curry's timetable ends the hands-off NHTSA style of the Reagan years, though his priority system acknowledges that NHTSA cannot accomplish every goal immediately.

Curry said his top goal is to raise the national safety consciousness and to increase safety-belt usage to 70 percent by 1992. Belt use in some states without usage laws is as low as 10 percent.

He plans to reduce the number of alcohol- and drug-related highway accidents and fatalities through more public education and tough methods that include expanded use of roadside checkpoints.

He also plans to cut the highway death rate to 2.2 per 100 million miles of travel by 1992 by reducing crash injuries and increasing crash survival rates.

One of the major ways that Curry plans to increase safety is by emphasizing state, local and private-sector input and solutions.

He said NHTSA has the muscle to affect policies on those levels because it already provides much

see CURRY, page 49

Curry's agenda: no surprises

By Diana T. Kurylko
AUTOMOTIVE NEWS STAFF REPORTER

WASHINGTON — There were no surprises in the 3-year plan released by the National Highway Traffic Safety Administration last week.

The 63 auto industry representatives briefed for 90 minutes by NHTSA Administrator Jerry R. Curry walked away feeling the government had laid its cards on the table and was willing to listen.

That was Curry's intention. "I believe we should try to over inform the public or the groups we work with, rather than keep them in the dark," Curry said.

Consumer groups will get a similar briefing tomorrow. And they're not expected to be as docile. They are likely to press the agency to step up defect investigations and to air concerns about child safety seats.

There is also some skepticism on their part over whether Curry will stick to his agenda through 1992.

Karl-Heinz Faber, vice president of of product compliance for service and parts at Mercedes-Benz of North America Inc., said the atmosphere marked a new "cooperative spirit."

"With this kind of approach . . . things can be achieved faster and in a more professional way," Faber said.

Toni Harrington, manager of government and industry relations for Honda North America Inc., agreed. "It showed an openness on the part of the agency and gave the industry a clear outline of NHTSA's major areas of concern for the next three years," she said.

Chrysler goal: Increasing U.S. parts at Diamond-Star

By Mary Connelly
AUTOMOTIVE NEWS STAFF REPORTER

DETROIT — Chrysler Corp. wants to slash the Japanese content of the next-generation Plymouth Laser/Eagle Talon/Mitsubishi Eclipse sport coupes in order to cut costs.

Chrysler Motors Chairman Bennett Bidwell said Chrysler wants to produce a U.S.-engineered replacement for the sport coupes built at Diamond-Star Motors Corp.

Diamond-Star, located in Normal, Ill., is a 50-50 joint venture of Chrysler and Mitsubishi Motors Corp.

Chrysler has relayed its desire for additional domestic content to its Japanese partner, according to Bidwell. "They said 'we'll think it over,' " he said.

The current sport coupes were designed by Chrysler and engineered by Mitsubishi. Replacements are planned for the early 1990s.

The current coupes have 60 percent domestic content and 40 percent Japanese content, a Diamond-Star spokesman said. The Mitsubishi engine and powertrain represent the bulk of the Japanese content. A change in sourcing would likely mean that Chrysler engines would be mounted in the models.

Bidwell said cutting Japanese content will reduce vehicle costs.

Chrysler has sought the aid of

FIRST REBATE: *GM pays $1,000 on minivans in effort to gain on Chrysler*

By Michelle Krebs
AUTOMOTIVE NEWS STAFF REPORTER

DETROIT — General Motors' first rebate on its new minivans is a strategic move aimed squarely at minivan leader Chrysler Corp., which has ended its minivan rebates for the rest of the model year.

GM announced a $1,000 cash rebate last week on its Chevrolet Lumina APV, Pontiac Trans Sport and Oldsmobile Silhouette, introduced last October. Customers can choose the rebate or financing at 6.9 percent on loans up to 48 months or 10.9 percent on loans of 49 to 60 months. The incentive runs through May 2.

GM hoped to sell 100,000 of the plastic-bodied vans in the 1990 model year. The monthly sales rate will have to pick up soon for GM to meet its goal. Through March 10, GM had sold just over 30,000 units and produced about 68,000.

By offering an incentive now, the GM divisions hope to capitalize on the usually strong spring selling season and to build awareness for the futuristic minivans.

But it also appears to be a move to capitalize on Chrysler's tough financial situation and minivan capacity constraints as well as Chrysler's vow not to return to rebates on minivans, which expired Jan. 31. Chrysler's minivans still hold more than 50 percent of that market.

In December and January, Chrysler's first-ever rebates on its minivans — $1,000 per vehicle — made sales soar.

"Chrysler did an effective job in January," said Michael Erdman, Chevrolet general marketing manager. "Now, we're hopeful that every Chrysler potential gives us a look."

GM's inventory of the new minivans has been climbing since the start of the calender year. Industry observers who track inventory levels said Chevrolet's February supply of Lumina APV units was 104 days, up from 88 in January. Stocks of the Pontiac Trans Sport ruse to 113 days from 92. Supplies of the Oldsmobile Silhouette are the lowest with a 71-day supply, up from 63. Olds has a small share of minivan output.

Meanwhile, GM's North Tarrytown, N.Y., assembly plant, which produces the minivans, is scheduled to reach its full production

Czech scorecard: VW pursues Skoda; GM strong at BAZ

By Richard Johnson
AUTOMOTIVE NEWS STAFF REPORTER

PRAGUE, Czechoslovakia — The Czech automaker Skoda is the next big prize in the race among Western carmakers to seal partnership agreements with counterparts in Eastern Europe.

Led by Volkswagen AG, General Motors and BMW AG, Western companies are aggressively courting Skoda as well as BAZ, a light commercial vehicle manufacturer in Bratislava. The new focus on Czechoslovakia follows the rapid conclusion of joint production agreements by VW, GM and Mercedes-Benz AG with the entire East German car and truck industry.

Chrysler, Ford and Saab recall 97,500 cars; new Monaco involved

By Jack Keebler and Rick Kranz
AUTOMOTIVE NEWS STAFF REPORTERS

Chrysler Motors has announced a recall of 12,500 1990 Eagle Premiers and Dodge Monacos because the steering shaft may separate from the steering gear, causing a loss of control.

Meanwhile, Ford Motor Co. is recalling about 60,000 1990 Ford Tempo and Mercury Topaz models because of a problem with the engine cooling fan.

Saab-Scania of America Inc. is recalling 25,000 1986-1990 Saab 9000 models for a potential lamp switch overheating problem. More than half of the affected cars also are being recalled to fix chafing between a throttle cable and a brake fluid line.

Apparently, Chrysler engineers, hoping to improve steering-system isolation, changed the hardness of a rubber isolation coupler in the lower intermediate shaft of the Premier and Monaco steering column. The new couplers have separated from the shafts on several cars, resulting in a loss of steering control.

Chrysler said 1990 models built before March 5, 1990, are affected. A spokesman said he did not know the breakout of Premiers and Monacos in the recall. Monaco was introduced last month.

Chrysler officials said they became aware of the problem recently through four field reports. The company said it has a fix that requires replacement of the intermediate shaft with one that has a "restrained" coupling.

Steering problems have prompted a recall of 12,500 1990 Eagle Premiers.

"There have been no accidents and no injuries as a result of this problem," said the Chrysler spokesman. "We sent a letter to NHTSA March 15. So, we now have a recall number that registers us with the government. Our dealers have also been alerted, and the customers have been notified.

"The odd thing is, these are all low-mileage vehicles — most have only about 3,000 miles or something like that," the spokesman said.

Last week Ford Motor Co. said it is recalling 60,000 1990 Tempo and Topaz models equipped with 2.3-liter engines for a problem with the engine cooling fan.

Ford said some fans could wobble excessively during engine startup and run down, possibly rubbing against the fan shroud. That could cause the fan motor to overheat and damage the engine.

Ford estimates that 50,600 of the affected cars are in the United States and 9,700 are in Canada. The remaining cars are in export locations.

A Ford Parts and Service Division spokesman said the automaker knows of no accidents, injuries or deaths related to the engine fan problem.

Saab has recalled 25,000 1986-1990 Saab 9000 models equipped with automatic transmissions to correct a potential overheating problem in a lamp switch.

Saab also said that among those cars are about 14,000 1988 through mid-1989 models recalled to install a bracket to prevent chafing between a throttle cable and one of three brake fluid lines.

In the larger recall, Saab told owners an electric circuit will be modified to eliminate the possibility of overheating. Saab said that it was aware of no accidents or injuries associated with either problem.

Automotive News Staff Reporter Laura Clark contributed to this report.

3 cars on borderline in crash

By Diana T. Kurylko
AUTOMOTIVE NEWS STAFF REPORTER

WASHINGTON — The driver and front-seat passenger in a Geo Prizm could possibly suffer head injuries in head-on accidents at 35 mph, the National Highway Traffic Safety Administration said.

The Prizm was one of five 1990 vehicles crashed in the latest round of NHTSA's new-car assessment program. The agency will check 36 vehicles this model year by crashing them into a fixed barrier at 35 mph. So far 12 have been crashed.

The Prizm is equipped with a non-motorized automatic safety belt.

Also tested was the Toyota Celica, equipped with a driver-side air bag. Its score indicated that head injuries are possible for drivers and unlikely for passengers.

The Hyundai Excel 2-door hatchback, with a motorized belt, and the air bag-equipped Ford Taurus sedan both had scores that indicate head injuries are unlikely.

Results for the Nissan Axxess minivan indicated head injuries are possible for drivers but are unlikely for passengers. The Axxess has motorized safety belts.

In the test, NHTSA records the potential for head and chest injuries. The lower the score, the less likely of an injury. Head injury scores below 750 indicate injury is unlikely; scores of 750 to 1,250 indicate injury is possible; scores above 1,250 indicate injury is likely.

NHTSA upgrades probes of Camaro, Voyager

By Diana T. Kurylko
AUTOMOTIVE NEWS STAFF REPORTER

WASHINGTON — The National Highway Traffic Safety Administration has upgraded a defect investigation of rear axles on the 1984-86 Chevrolet Camaro and Pontiac Firebird.

NHTSA has opened an engineering analysis of complaints that the axle shaft fractures, causing the loss of one wheel. Investigations typically move to the engineering analysis phase if the preliminary study shows a defect could exist.

The agency has received 169 owner complaints, alleging 132 accidents and 59 injuries. A recall, the next step in the defect investigation process, could involve 891,699 cars.

NHTSA also upgraded to the engineering analysis level its investigation of under-the-instrument-panel fires in the 1984-89 Plymouth Voyager and Dodge Caravan. NHTSA said the fires occur in the area of the emergency brake levers. A recall could affect 1.7 million minivans.

Three preliminary investigations involving the Chevrolet Corvette have been opened.

NHTSA is trying to determine whether electrical wiring on the 1990 Chevrolet Corvette could rub against the hood-release cable and become a potential fire hazard.

About 3,400 cars could be affected.

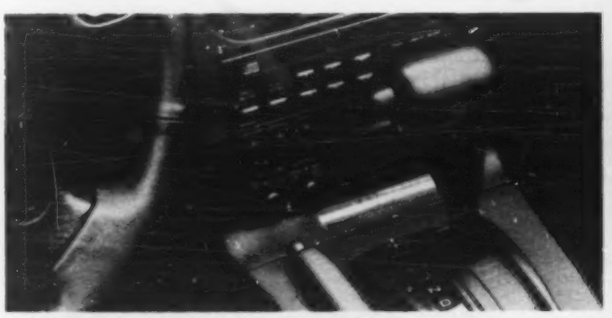
The 1990 Corvette ZR-1 is being investigated for a potential problem with the button on the parking brake lever that could disable the parking brake. About 1,000 ZR-1 models could have the problem.

Separately, NHTSA is investigating the safety-belt retractor assembly on the 1986-87 Corvette. The agency has received seven complaints — one alleging injury — that the belt does not work properly. About 33,000 vehicles could be affected.

NHTSA is also investigating 1982-89 Chevrolet S10 Blazer/GMC S15 Jimmy sport-utilities and Chevrolet Astro/GMC Safari vans. There have been complaints that the cable holding the spare tire breaks, dropping the tire onto the road.

Caprice police cruiser

Chevrolet is offering a police package for its revamped 1991 Caprice. Standard equipment includes a driver's side air bag, anti-lock brakes and a 5-liter V-8 that produces 170 horsepower at 4,000 rpm and 255 pounds-feet of torque at 2,400 rpm. But almost all police-package buyers are expected to choose the optional 5.7-liter V-8 that delivers 195 horsepower at 4,400 rpm and 285 pounds-feet of torque at 2,400 rpm. Chevrolet expects to retain its 60 percent share of the 60,000-unit police-car market.



Automatic transmission is a $720 option for Miata.

Miata offers automatic drive

By Kristine Stiven Breese
AUTOMOTIVE NEWS STAFF REPORTER

IRVINE, Calif. — Mazda Motors of America Inc. has begun offering an automatic transmission on its popular Miata MX-5 sports car. The price of the option is $720.

Rod Bymaster, product manager of sports and sporty cars, said the automatic will make the car more attractive in crowded urban markets.

"We're offering a choice to those buyers who spend two to three hours on the freeway every day," Bymaster said. "As much fun as a manual is on the weekends, people have to live with it on a daily basis, and many commuters, want an automatic for that reason."

Dealers said they have been asked about the automatic option, but don't expect it to be wildly popular. "A lot of people are going with the automatic for the comfort of driving, but it won't ever drive our sales," said Masen Fayyad, Mazda sales manager at Keyes for Cars of Van Nuys, Calif.

Bymaster expects about 10 to 15 percent of Miata buyers to choose the automatic.

Miata sales got off to a breakneck start last summer, reaching a monthly peak of 5,029 in August.

Sales have since leveled off at a lower figure. Last month, Mazda sold 2,510 Miatas, bringing the total since its June launch to 28,414.

Safety group urges second look at Toyota cruise control

By Diana T. Kurylko
AUTOMOTIVE NEWS STAFF REPORTER

WASHINGTON — The Center for Auto Safety has charged that the 1985-88 Toyota Camry and Corolla suffer from a "sudden acceleration" problem and has asked the National Highway Traffic Safety Administration to begin an investigation.

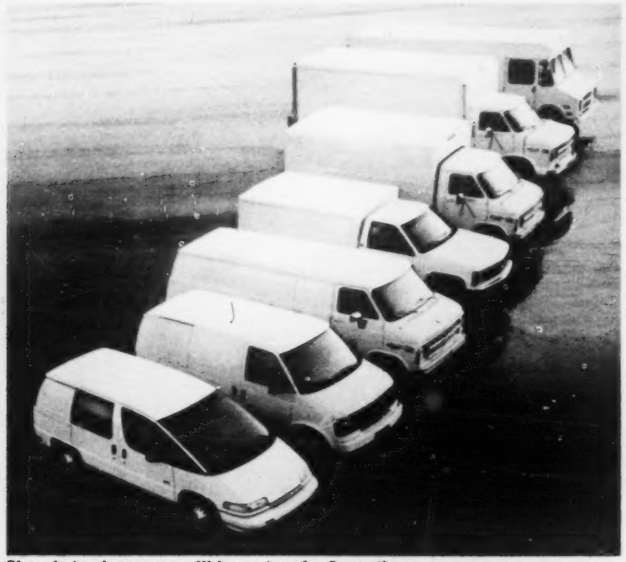
The call was prompted by Toyota's Feb. 28 recall of the 1983-84 Camry and 1984 Corolla for a faulty cruise control system. NHTSA described it as a computer malfunction that could cause engine racing when the car is started with the cruise control in an "on" position.

Consumers have reported the same problem with the 1985-88 models, according to Sam Cole of the center's vehicle safety staff.

Cole said the center has received more than 30 reports of accidents involving the 1985-88 Camrys and Corollas. "We don't see any difference between what happened with these cars and the 1983 and 1984 models that were recalled," he said.

Toyota said it is unaware of any cruise control complaints affecting the later models.

The consumer group also alleged that Toyota is aware of defective cruise controls in many of its models and that the company has included the system in a list of secret warranties. The center has turned over 200 cruise control complaints to the Federal Trade Commission and has asked for an investigation.



Chevy's truck caravan will be on tour for 3 months.

Chevy trucks on tour

Commercial business heavily emphasized

By Joseph Bohn
AUTOMOTIVE NEWS STAFF REPORTER

Two Chevrolet vehicle convoys are touring the country to demonstrate the division's commitment to the commercial truck business.

General Motors' consolidation of all medium-truck marketing under GMC Truck a few years ago created the impression that Chevrolet was de-emphasizing commercial sales.

The new "Sidewinding America" multimillion-dollar extravaganza, in which Chevrolet is winding through 110 cities with two 23-vehicle caravans, seeks to dispel that notion.

The tours began in mid-March and continue for three months. Included are stops for five days in each of Chevrolet's 22 geographic branches.

J.C. "Jim" Perkins, Chevrolet general manager, said, "Sidewinding America is Chevrolet's attempt to reach out to the people who actually use or buy our trucks for commercial use."

The information — for invitation-only guests — will be tailored for various vocations in different parts of the country for each 2½-hour stop. The applications discussed will include wreckers, logging, snow plowing, farming, construction, bakery delivery and catering.

The Chevy trucks on hand and on film range from an S-10 pickup to medium-duty models, with various configurations of all vehicles.

Potential customers being invited include dealers, managers, salespersons, manufacturers and distributors of commercial equipment, and "end users," including people who buy trucks for their businesses.

Large and small fleet buyers are being targeted.

Chevrolet is including its new 1991 model chassis cab in the tour. It is scheduled to be introduced this fall.

The 1991 model 15,000-pound gross vehicle weight chassis cab comes in 60-inch, 84-inch and 108-inch cab-to-axle lengths. It will be used in various applications, ranging from "hot shot" commercial towing to wreckers.

Commercial trucks represent 26 percent of overall Chevrolet truck sales and 24 percent of total industry truck sales.

Chevrolet's Sidewinding America display is fully self-contained, and is designed to be assembled on any 200-foot by 200-foot flat surface. The caravan carries its own generators, and does not require any external power source to run its audiovisual and computer equipment.

It includes a 70-foot by 70-foot tent, capable of seating 200 people. The tent requires no stakes, poles or ropes; it is supported by four Chevrolet pickups. It is held up by a 41-foot crane mounted on a Chevrolet medium-duty chassis.

GMC hopes restructuring strategy, new products mean bigger sales

By Joseph Bohn
AUTOMOTIVE NEWS STAFF REPORTER

General Motors is seeking to recapture first place in the medium-duty market by reorganizing some of its operations and offering new products.

Ray E. Rota, general sales manager of GMC Truck Division, said GM held the No. 1 spot in medium-truck sales for four calendar years before relinquishing it to Navistar International in 1988.

In 1989, Ford Motor Co. forged ahead of Navistar by capturing 40.58 percent of Classes 4-7 on sales of 67,705 trucks.

Second-place Navistar, with 43,514 sales in that segment, took 26.08 percent of the market. GM, with 38,539 sales, had 23.10 percent. The rest went to importers, selling through their independent distribution channels.

GM's goal is to capture 30 percent of the medium-duty market in 1990, 33 percent in 1991 and more than 35 percent by 1992. It is shooting for 40 percent of the market by 1993-94, according to Rota.

GM's Truck & Bus Group, which handles medium-duty manufacturing and marketing for the company, is realigning its operations and introducing new products to achieve those goals.

GMC has changed its field organization, assigning new account executives to work in the field with dealers in marketing trucks.

They are responsible for contacting dealers and assisting them in training, and for calling on body builders, body equipment companies and retail fleets in conjunction with the dealers.

This team of field account executives "will work with the dealer to develop marketing plans and programs that will address the needs of that particular dealership area. That's a very positive cultural change for us," Rota said.

One of GM's major requirements is that each of its medium-duty dealers be a full-service Caterpillar engine dealer by August.

The Caterpillar 3116 is an optional engine in the GMC Topkick and Chevrolet Kodiak.

GM is still selling a lot of gasoline engines in its Topkick/Kodiak models. Gasoline engines account for about 20 percent of medium-duty sales industrywide, Rota said, but they account for more than 35 percent of GM's truck orders.

He attributed that to the "people and funds" GM invested in bringing out a new line of fuel-injected medium-duty gas engines at a time when some competitive manufacturers switched entirely to diesel engines.

GM will have to compete head-to-head with Ford's Class 4 Super Duty if it hopes to regain the lead in the medium-duty segment.

GM has a new Class 455 slated for the 1991 model year. The truck will be new from the ground up, but it will use many of the mechanicals of its light-duty conventional pickup.

It will have a 15,500 to 16,000-pound gross vehicle weight capacity.

Ford retailed 25,648 Super Duty units in calendar 1989, capturing 94.88 percent of Class 4 sales.

Iveco, Grumman van venture

Iveco Trucks of North America has begun making Grumman Olson Kurbmaster walk-in van bodies available on its EuroTurbo chassis. The Iveco rail chassis has been engineered specifically for walk-in body applications.

BRIEFS

Bus groups eye NTEA

WASHINGTON — Representatives of seven Type A and Type B school bus manufacturers met with the National Truck Equipment Association to discuss forming a product division within the group.

The school bus representatives discussed regulatory and industry issues facing manufacturers of school buses built on converted vans and van cutaway chassis.

Irv Kushner, president of TPI Sturdicorp of Suffern, N.Y., and chairman of the group, said bus manufacturers face many industry issues and concerns which they can deal with more productively and efficiently as a group.

The manufacturers' goals are to give unified responses to proposed federal government regulations, particularly those proposed by the National Highway Traffic Safety Administration.

They are also seeking to become more active as a group in developing a unified voice with the van and chassis manufacturers and in developing a public relations program for the industry to promote the building of safe, high quality vehicles.

New Caterpillar engine

MOSSVILLE, Ill. — Caterpillar Engine Co. has begun offering a new 3406B engine in the on-highway truck market.

The new Cat engine is rated at 460 horsepower at 1,900 rpm. It develops 1,600 pounds-feet of torque at 1,200 rpm, giving it a wide 750 rpm operating range. The 26 percent torque rise minimizes shifting with demanding terrain and loads.

Caterpillar's Programmable Electronic Engine Control system is an integral part of the fuel system and is a standard feature of the engine.

The engine features such design changes as a new crankshaft and wider connecting rod bearings, gallery-cooled pistons for more efficient heat dissipation and a new camshaft, injection nozzle and turbocharger.

GM, Durakon agreement

LAPEER, Mich. — Durakon Industries Inc. entered into an agreement with General Motors Truck and Bus Group to supply bedliners for GM light-duty pickups on an original equipment manufacturer basis.

Durakon will provide just-in-time delivery to three GM assembly plants from its Lapeer manufacturing plant.

Idealease purchases

ATLANTA — An investor group headed by William W. Dees, a former senior executive with Navistar International Transportation Corp., purchased two Idealease operations.

The two truck leasing operations include Idealease of Atlanta and Idealease of Kennesaw, Ga. They have three locations in the metropolitan Atlanta area.

Dees' group took over Central International Trucks Inc. with locations in Duluth and Atlanta and Heuer International Trucks Inc. in Kennesaw. Both dealerships were already members of Idealease Inc., a dealer-owned truck lease and rental organization in Chicago with 13,000 vehicles in service.

Changing Captives

Transplants take on the role

By: Al Rothenberg

Japanese transplant production in the United States is blurring what has been known as the "captive import market."

Blame it partly on the U.S. government's corporate average fuel economy regulations.

"Captive imports, or cars of foreign origin sold by America's Big 3, do not help our domestic CAFE," said Joel Pitcoff, manager of research and analysis for Ford Motor Co. in Dearborn, Mich. "Domestic companies must separate CAFE data between U.S. output and products of overseas companies of which they are part owners." Cars produced in this country by transplants whose products carry less than 75 percent domestic components are measured as imports, but if domestic content can be raised past 75 percent, as Ford has done with Probe this year, the car can be part of the domestic fleet for CAFE purposes.

Early captive imports, which invaded the American market in the mid-1950s, came from totally owned European operations of General Motors, Ford Motor Co. and Chrysler Corp. Studebaker Corp., now defunct, held distributor rights to Mercedes-Benz cars.

Current captives, as defined by the Motor Vehicle Manufacturers Association, are vehicles imported from offshore facilities for sale by dealers of U.S. manufacturers. Their sales in 1989 totaled 340,590 cars, down 52,822 from 1988, according to MVMA.

But when Big 3 executives talk about captives, they like to include transplants.

For example, the Chevrolet Geo line, in addition to the Isuzu Metro and Storm that are built in Japan, includes the Prizm made by New United Motor Mfg. Inc., a joint venture of GM and Toyota Motor Corp. in Fremont, Calif., and the Tracker, a sport-utility built by CAMI Automotive Inc. of Ingersoll, Ontario, a joint venture of GM Canada and Suzuki Motor Co. Ltd.

"Chevrolet looks for a market of 280,000 Geos in 1990," said James B. Fitzpatrick, GM vice president in charge of the marketing and product planning staff. Prizm, at $12,000, is the flagship of the Geo line, which aims at the low end of the market, Fitzpatrick said.

"The Storm, which is really taking off, is a small sport car in the low end as compared to mid-sports like Camaro and Firebird and a luxury sport car like Corvette," he said.

"Tracker's a toy," Fitzpatrick said. "Admittedly, higher income people buy it, but they buy it for their kids. Suzuki Sidekick is a lot like it."

The GM executive notes the following demographics on Geo, LeMans and Chevrolet principal owners:

People buying their first car ever accounted for 23 percent of Geo, 26 percent of LeMans and 13 percent of domestic Chevrolet sales.

Customers who had purchased used cars, but were buying their first new car, accounted for 46 percent of Geo, 57 percent of LeMans and 33 percent of Chevrolet sales.

Median income of Geo and LeMans buyers was in the low $30,000 range compared to Chevrolet's $38,000.

Women drivers represented 60 percent of Geo and Chevrolet sales and 69 percent of LeMans.

Median age of buyers was 35 for Geo, 32 for LeMans and 40 for Chevrolet.

About 30 percent of all buyers had earned a college degree; and more than half the Geo and Chevy owners and 43 percent of LeMans customers were married.

Looking ahead, Japan and Korea are likely to remain the major overseas sources of Big 3 captives.

"We've looked at our German Opel (sold through Buick dealers in the '50s), but nothing has come of it," Fitzpatrick said. "We're not actively looking at Saab of Sweden, a recent GM affiliate, but down the road something may be possible. Who knows? We always go back and look at Opel because of its great product line."

Fitzpatrick rules out an import for Buick and Oldsmobile, explaining that their dealers don't want one. "There's no place for an import at Buick, which considers its products the premier American road cars," he said. "Oldsmobile is finally finding itself as a contemporary family car, and really has the compact and mid-sized markets covered anyway."

Chevrolet is a different story. "Chevy is counting on Geo to help regain the penetration it lost when it migrated out of the low-end market and left room for the imports to move in," Fitzpatrick said. "Now Chevy is trying to return there again." The division's last domestic product in the low-priced subcompact segment, the Chevette, perished about five years ago.

Ford has stayed in the lower segment with Escort and Tracer. Pitcoff counts just about any car with a foreign flavor as a captive, including the Probe built by Mazda Motor Manufacturing (USA) Corp. in Flat Rock, Mich., as well as GM's Cadillac Allante, assembled in Detroit with an Italian-made body, and Chrysler's Canadian-built Eagle Premier.

His definition of a captive import: "A vehicle produced by a foreign manufacturer, regardless of where it's built — Europe, Japan, Illinois, California — and badged for sale by an American manufacturer."

SOURCE: Motor Vehicle Manufacturers Association

He does not count his company's Mexican-made Tracer because its source is a Ford factory.

He sees the market becoming more fragmented and predicts more cooperative deals such as Ford and Mazda with the domestic Probe and Japanese MX6.

Said Pitcoff: "What happens if you want to be a full-line producer and be in an emerging market niche that presents a profit opportunity — or a profit risk — and you and your dealers are not represented in that niche?

"When it isn't viable to develop your own product because you lack engineering resources, manufacturing capacity or enough volume to fill a plant, or you don't have an existing platform to fill a market niche, you look for a partner. Probe's an example. We had a rear-drive V-8 Mustang for the traditional red, white and blue American audience. But other cars in that segment were primarily front-wheel drive, V-6 or turbocharged Japanese entries. We didn't have a platform for such a car and didn't want to invest in one for the kind of volume expected.

"Similarly, Mazda was looking for a facility here to add capacity and, partly, to get around the voluntary restraint agreement limiting Japanese exports to the U.S. It was also a hedge for Mazda against fluctuations of the yen versus the dollar.

"Out of that double dilemma, Mazda and Ford developed the idea of Flat Rock, a plant we could fill together."

Similarly, the Chevrolet-Toyota joint production of the Corolla and Nova, since renamed the Prizm, helped both producers.

Although Ford's captive-buyer demographics are close to GM's, Pitcoff said, "It's difficult to generalize. I don't think a person gets up in the morning and says, 'By golly, I'm going out and buy a captive.' "

Ford unsuccessfully tried to lure Americans to Merkur Scorpio and XR4Ti captives from Germany. While the company believes Merkurs met other imports head on for value, its dealers say customers preferred a loaded Sable with fwd and 6-passenger capacity for about the same price.

Although Ford Lio Ho Motor Co. builds cars in Taiwan, there are no plans to export them here. "Those products would only duplicate what we already have," Pitcoff said. "Futhermore, it's a different ball game today than in the middle '50s when there were no federal regulations. One of the major impediments today is that before you think about bringing a car in from abroad, you have to check with the regulatory area to determine its cost. Tooling investments for emission and safety controls can run into the tens of millions."

There are significant regulatory benefits for two companies with similar products. For example, since Probe and MX6, or Prizm and Corolla, have similar bumpers, weight, emission controls and engines, they certify for government standards together. The savings are considerable. □

Japanese post a gain, but import sales drop for month

By Kristine Stiven Breese
AUTOMOTIVE NEWS STAFF REPORTER

Sales of imported cars dropped 4.46 percent last month, echoing February's 3.71 percent drop in domestic sales.

The import total was 193,312, down from 209,973 last year.

As a group, the Japanese were the only import segment to post a sales gain for the month, jumping 2.51 percent from the year-ago period.

European and Korean imports were down 16.65 percent and 23.84 percent, respectively.

With sales of 141,520 cars, the nine Japanese automakers accounted for 73 percent of all imported-car sales, up from 68 percent a year ago.

In addition, Japanese makers are increasing their presence in the U.S. market by boosting production of U.S.-built cars.

Among the Japanese, Mitsubishi, Toyota, Honda, Acura and Daihatsu were the gainers in import sales. Mitsubishi's jump was the biggest, with sales up 64.03 percent to 8,656. The only other double-digit improvement was Toyota's 15.92 percent climb to 34,104.

Honda's imported-car sales rose 8.35 percent, and Acura was up 5.85 percent. Daihatsu sold 1,027 cars, eight more than last year, for an increase of 0.79 percent.

Mitsubishi's sales were led by the Mirage, which accounted for nearly 60 percent of the company's total import sales.

The Corolla and Celica performed particularly well for Toyota, rising 44.42 percent and 70.74 percent, respectively.

Only three European makes made gains in February: Jaguar, Mercedes-Benz and Porsche.

Jaguar's 1,475 sales were up 8.38 percent; Mercedes climbed 4.85 percent to 5,811; and Porsche sold 725 cars, up 35.26 percent from 536 in February 1989.

In the closely watched Japanese luxury race, Honda's Acura Division still holds a commanding lead.

Acura sold 10,019 cars last month, up from 9,565 in February 1989. Lexus followed with 4,171. Infiniti, which was launched in November, trails the competition, having sold 1,075 cars in February and 2,146 cars in the first two months of the year.

In the cases of Lexus and Infiniti, sales have been split just about evenly between their entry-level models, priced below $25,000, and their high-end models, which list for $35,000 (Lexus) and $38,000 (Infiniti).

Although Nissan's import sales were down 15.53 percent last month, Stanza sales were up 82 percent from a year ago, to 3,614. The Stanza has been lagging, and its success in the competitive middle segment is seen as critical.

BMW saw sales decline across its line, as more buyers apparently consider the new Japanese luxury offerings. The BMW 3 series dropped 35.38 percent.

Audi fell 3.22 percent; its only gain was in the 100/200 series.

MINIVANS

FROM PAGE 3

rate of 225,000 units annually in May.

"We're starting to get production in place, and we think the spring selling season is a good time to move (the APVs)," Erdman said.

Dealers said the $1,000 rebate and more advertising will help boost sales. They said the vehicle hasn't caught on with customers, but they expect it will, eventually. The radical design, which features an aerodynamic body and steeply raked windshield, intimidates customers initially, dealers said.

Jack Fowler, new-car sales manager at Capitol Chevrolet in Montgomery, Ala., said the dealership, which sells 700 to 800 vehicles a month, has sold only four Lumina APVs since the October introduction. He sold one of the five on his lot last week, just after the rebate went into effect.

"The $1,000 rebate will help," Fowler said. "It'll take time for customers to get used to" the minivan.

Meanwhile, Chrysler says sales of its minivans haven't been hurt by new competition from GM and other automakers.

"If anything, they are tending to increase the segment," Chrysler Motors Chairman Bennett Bidwell said last week.

But GM and some analysts insist the GM models are cutting into Chrysler's business and are optimistic about their success.

Wendy Beale Needham, analyst with the New York securities firm Smith Barney, said that while the minivan market has expanded, it also appears that both GM, with its new models without incentives, and Ford, with the extended version of its Aerostar, gained market share at Chrysler's expense in the last quarter of 1989.

Erdman said test drives are "critical" in selling the futuristic-looking vehicles. The long snout and instrument panel worry some potential buyers.

But not all dealers are pushing test drives. As a result, Erdman said, Chevrolet may consider paying an incentive to the customer to test drive the vehicle or to the salesperson for giving a demonstration ride.

Automotive News Staff Reporter Mary Connelly contributed to this report.

GM sweetens incentives; BMW joins in

By Michelle Krebs and Jim Henry
AUTOMOTIVE NEWS STAFF REPORTERS

Pontiac, Oldsmobile, Chevrolet, Buick and BMW of North America Inc. announced incentives last week.

Pontiac and Oldsmobile increased the cash rebate on the slow-selling Grand Prix and Cutlass Supreme, respectively.

Oldsmobile doubled its previous $1,000 cash rebate on Cutlass Supreme, based on a successful program in its Eastern region.

Pontiac is offering a $2,000 rebate on the Grand Prix, depending on dealer participation. Dealers must kick in $500 of the $2,000. If they don't, the rebate is $1,000.

Chevrolet's long list of consumer incentives has grown to include a $1,000 rebate on Geo Prizm and $500 on the extended Astro van.

Buick is paying a $1,500 rebate on Riviera.

"Riviera sales in 1989 were up 64 percent over 1988, and 1990 sales through early March were 9 percent ahead of last year," said Robert E. Coletta, Buick general sales and service manager. "We want to maintain or increase that momentum into the spring, and that is why we've decided to offer these incentives."

The incentive comes a week after Oldsmobile announced a $1,500 cash rebate or cut-rate financing on its Toronado. Oldsmobile's incentive runs through the end of the model year.

BMW is offering special lease and financing rates on its entry-level 3 series. Through April 30, BMW Credit Corp. is offering what amounts to a 3-year lease with the same monthly payments as a 5-year lease on 1990 325i and 325is 2-door and 4-door sedans. A 10 percent "capitalized cost reduction payment," in effect a down payment, is required.

Through April 30, BMW is offering finance rates ranging from 2.9 percent for a 24-month loan to 7.9 percent on a 60-month loan on the 1990 325i; and from 4.9 percent for a 24-month loan to 8.9 percent for a 60-month loan on the 325is. A 10 percent down payment is required.

Also, through May 31, 3-series drivers with a year or less remaining on a lease may terminate their present lease early if they lease a new 1990 3-series BMW.

Truck output of 91,160 is 1990 high

By Karen Detkowski
SPECIAL CORRESPONDENT

U.S. truckmakers last week scheduled their highest production so far this year.

Targeted output of 91,160 trucks was 7.18 percent above the prior week and 25.63 percent over the year-ago week.

So far this year, 863,044 trucks have been built, 20.09 percent below the year-ago total.

Scheduled assembly of 140,243 cars last week rose 3.32 percent over the previous week and 9.99 percent above the year-ago week.

The year-ago week's production was reduced by the Good Friday holiday, when all plants were closed except Toyota's Georgetown, Ky., facility.

Year-to-date, 1,307,973 cars have been assembled, 26.25 percent below 1989.

Companies split last week's scheduled production as follows: General Motors, 43.01 percent; Ford Motor Co., 25.73 percent; Chrysler Motors, 11.23 percent; Honda of America Manufacturing Inc., 6.72 percent; Toyota Motor Manufacturing U.S.A. Inc., 3.17 percent; Mazda Motor Manufacturing (USA) Corp., 3.09 percent; New United Motor Manufacturing Inc., 2.92 percent; Diamond-Star Motors Corp., 2.13 percent; Nissan Motor Manufacturing Corp. U.S.A., 1.70 percent; and Subaru-Isuzu Automotive Inc., 0.30 percent.

GM scheduled Saturday overtime last week at the following truck assembly plants: Baltimore; Flint, Mich.; Pontiac (Mich.) East; and Moraine, Ohio.

Also working last Saturday were GM's Orion Township, Mich., car plant and the Buick City car facility in Flint. The Janesville, Wis., plant was scheduled for Friday overtime.

Ford slated overtime last Saturday at its Wixom, Mich., car facility and the Louisville, Ky., truck plant.

Car build dips 15% in Canada

Canadian auto output was estimated at 22,396 units last week, 15.39 percent below the previous week but 30.69 percent over the year-ago week.

So far this year, 231,960 cars have been assembled, 1.13 percent below the 1989 total at this point.

Truckmakers' targeted output of 20,299 units was 0.45 percent below the prior week, but 27.44 percent above the year-ago week.

Year-to-date, 207,514 trucks have been assembled, 13.80 percent below 1989's tally.

The year-ago week's output was affected by the Good Friday closing of all plants.

Chrysler Motors closed its Bramalea, Ontario, assembly plant last week for six weeks because of slow sales of the Eagle Premier and the new Dodge Monaco. Days' supplies for the two models were 190 and 292, respectively on March 1. The plant has been closed seven of this year's 11 weeks.

GM meets with new top-level dealer group

By Michelle Krebs
AUTOMOTIVE NEWS STAFF REPORTER

DETROIT — Dealers took a first step last week toward having their voices heard by top executives of an auto manufacturer. A committee of dealers has been formed to advise General Motors on corporate policies that affect them.

While marketing divisions have had dealer councils, the parent corporation has not. Lloyd Reuss, GM executive vice president in charge of North American automotive operations, was the top-ranking GM officer at the first meeting last week in Chicago.

Ray Green, new president of the National Automobile Dealers Association, was the driving force behind creation of the GM-Dealer Policy Committee. He called its formation a "historic event in dealer-factory relations." In the upcoming months, he said, he will press other manufacturers to form similar committees.

Green said the auto industry is in a revolution, particularly in retailing. The dealers are the experts on retailing, he said.

"Now GM will get dealer input on the changes that take place," he said. C.N. "Bud" Moore, vice president in charge of GM's customer sales and service staff, agreed. "With so many manufacturers in the marketplace and with all of them having more capacity than demand, we can't afford to make mistakes. Mistakes will kill us," Moore said.

"Dealers are the ones closest to the customer. We can do a better job with the right kind of input from them."

The committee will advise GM

Green: Dealers are retailing experts.

Moore: We can't afford mistakes.

Odds favor the Viper

Chrysler Corp. Chairman Lee Iacocca gave hope to anyone betting — or praying — that the company will build the high-performance Viper roadster.

Last week, Iacocca said the odds in favor of production are "75-25." And he said that Viper will definitely get a V-10 engine if the project becomes reality.

A restyled Viper, snapped recently, carries production-like bumpers and lacks the side exhaust pipes that highlighted the original concept car.

As Congress debates, fuel economy falls

By Diana T. Kurylko
AUTOMOTIVE NEWS STAFF REPORTER

WASHINGTON — The average fuel economy of passenger cars sold in the United States fell for the second straight model year in 1989, the National Highway Traffic Safety Administration reported last week.

The fuel economy of the nation's domestic and import car fleets slipped to 28.3 mpg, down 0.4 mpg from the 1988 model year, NHTSA said in a report to Congress.

The finding indicates that public policy and the marketplace could be set for a head-on collision on the issue of fuel economy.

Fuel economy has been falling primarily because consumers prefer bigger, more powerful cars, the report said. But Congress is considering proposals to increase CAFE standards from the current 27.5 mpg to as much as 40 mpg by 2000. Automakers say the only way to meet such standards would be to sell a lot more small fuel-sippers than the public wants.

In a separate report, the EPA predicted another 0.4-mpg decline in fuel economy for the 1990 model year. The prospect of a third consecutive annual drop in CAFE prompted the agency to warn, "If this backslide continues, problems with nationwide fuel consumption will increase, and global warming trends will worsen at a pace faster than is generally being assumed by analysts."

Both government reports attribute the decline in part to Asian imports expanding into larger vehicles, including luxury cars, that are driven by engines with greater displacement and higher horsepower. According to NHTSA, the average curb weight of 1989 cars increased 37 pounds for domestic models and 79 pounds for imports. Horsepower per 100 pounds, a measure of vehicle performance, rose from 4.18 to 4.38 on the domestic side and from 3.99 to 4.15 for imported cars.

EPA said the fuel efficiency of Asian-made cars is dropping twice as fast as that of domestic and European cars because Asian vehicles are gaining weight at double the rate of the others. The horsepower of Asian cars is increasing three times as fast as that of European cars and more than four times as fast as that of domestic cars, EPA said.

In recent years, for example, Nissan Motor Corp. in U.S.A. has introduced its new 300ZX and 240SX models, a bigger Stanza and a V-8-powered Infiniti. In the process, the average horsepower of Nissan's car fleet increased 51 percent between the 1988 and 1990 model years. Engine displacement was up 23 percent, and weight increased 9 percent.

As a result, EPA projects Nissan's fuel economy will fall 8 to 15 percent by the end of the model year, compared with 1988 levels.

NHTSA said that only nine of the 27 automakers selling 1989 cars in the United States improved their CAFE ratings. But those nine accounted for only 25 percent of total 1989 sales. They included

Iacocca tells top execs to buy stock

By Mary Connelly
AUTOMOTIVE NEWS STAFF REPORTER

DETROIT — Chrysler Corp. Chairman Lee Iacocca is encouraging nearly 100 top company managers to buy Chrysler stock.

The move is unprecedented in the domestic auto industry, a management expert said.

Top executives were told of the program last week. It comes after Chrysler stock has dropped to about $17 a share, down about 37 percent from its 52-week high. Still, the goal is not to buoy the stock but to make executives accountable.

"Mr. Iacocca encouraged top management to buy stock," a company spokesman confirmed. "They were encouraged to be active participants in the ownership of the company.

"This is a way of ensuring that top management's fortune is tied to the fortune of the company and that everybody has a personal stake in the company's performance," the spokesman said. "As a group, we're optimistic about the long-range performance of the company. It is not unreasonable to have a stake in that performance and share the risk and rewards with shareholders."

Chrysler declined to give such details as the amount of stock executives have been encouraged to buy.

Chrysler Corp. Vice Chairman Gerald Greenwald said, "We don't discuss executive compensation except in the proxy statement, which we file every year."

Chrysler's proxy statement is expected to be released in mid-April.

Wall Street analysts applauded the stock purchase program and said the action was unrelated to Chrysler's corporate stock buyback program.

Chrysler has been stressing man-

1991 Accord to qualify as 'American' car

By Lindsay Chappell
AUTOMOTIVE NEWS STAFF REPORTER

MARYSVILLE, Ohio — If you were stunned last year to see the Honda Accord become the best-selling car in America, take heart. It won't be "Japanese" much longer.

Honda of America Manufacturing Inc., the most aggressive of the transplant automakers in increasing domestic content, expects to introduce 1991 Accords that have 75 percent North American content. The Ohio-made car would be the first Japanese-badged auto to qualify as a domestic car under federal rules.

The 1992 model year Honda Civic built in Ohio is also expected to reach the 75 percent domestic content mark, said David Nelson, Honda's vice president of purchasing.

Dismal Dodge

The Renault-influenced Dodge Monaco is off to a slow start. Only 461 have been sold since production started in December; dealers say it duplicates the better-selling Dodge Dynasty. Story on Page 2.

Monaco a sales dud; Dodge looks for spark

By Mary Connelly
AUTOMOTIVE NEWS STAFF REPORTER

DETROIT — Shouldered with the burden of selling the Renault-influenced Dodge Monaco sedan, Chrysler Corp. is trying to avoid embarrassment in the wake of the vehicle's crippled launch.

Monaco has taken such a bruising from Dodge dealers and consumers since its February introduction that the company is considering a price cut and is rethinking advertising strategy and marketing plans. A fall re-launch is already a possibility.

"We're not happy with the car's launch. We think we can do better and we're looking for ways to do better," said Larry Baker, Dodge general manager. "We're not pleased, but we're not writing it off."

Chrysler hopes to sell 20,000 Monacos in the 1990 calendar year, Baker said. But dealers sold only 461 from the time production began in December 1989 through March 20. And on March 23, the company announced a 6-week shutdown of the Bramalea, Ontario, assembly plant where the car is built.

Dodge has a 292-day supply of Monacos. Only 461 have been sold since the car went into production in December.

Dodge had a 292-day supply of Monacos on March 1.

And that only begins to chronicle the Monaco's woes.

The introduction was ill-timed; Monaco was launched in the traditionally slow-selling month of February, during an industrywide sales downturn.

Models built before March 5 are already subject to a recall because the steering shaft may separate from the steering gear, causing loss of control.

Advertising strategy was changed in mid-launch.

And many Dodge dealers do not want to sell the Monaco because they already retail the successful Dodge Dynasty sedan.

Last week, Chrysler slapped a $1,000 dealer rebate on the Monaco LE and a $500 dealer rebate on the Monaco ES — in addition to existing consumer rebates — to placate the dealer body.

Consumer incentives were expected to be increased this week from the current rebates of $1,000 on the LE and $1,500 on the ES, according to a well-placed dealer source.

"It's a redundant car," said a Midwestern Dodge dealer. "We need a convertible. We need a good 2-door. We don't need a 4-door sedan. We've got a good 4-door sedan that is priced right — the

Poland's FSO seeks linkup with West

By Richard W. Bruner
STAFF CORRESPONDENT

WARSAW, Poland — The managers of Fabryka Samochodow Osobowych, the Polski Fiat manufacturer, have hung out a "for sale" sign.

"We are open to any economically reasonable proposal, including a joint venture," said FSO's director of marketing and promotion, Zbigniew Choros.

Such a proposal could conceivably come from the Italian manufacturer, Fiat Auto, which recently signed a new licensing agreement with the other state-owned auto factory, Fabryka Samochodow Malolitrazowych, of Bialsko Biala in southern Poland.

Part of its deal is to sell cars through Fiat Auto, exporting about 35 percent of its annual production of 200,000 2-cylinder cars.

But FSO is willing to go beyond a licensing agreement. Its major goal is to launch a new car.

"We're having discussions with various potential partners to try to organize production of a new car," said Choros. He said FSO wants to replace its oldest car, a 1968 version of the Fiat 125.

Would FSO be interested in an American partner? "Of course," said Choros. The terms of a joint venture are "open to negotiation," he said.

"Right now, we have a complex situation that must be clarified by national legislation. The government is preparing final plans for the disposition of factories like ours," he said.

Choros said FSO would be open to a 50/50 split with a joint venture partner. More than anything, though, FSO needs a Western partner's cash.

"The whole problem is money," he said. "If we got the money, then we could buy a license and the technology and everything and pay for the marketing service."

Choros added, "I'd very much like to expand into the West. I think we have no other way. We have to observe those very tough rules and conditions which prevail in the Western markets. We have to get used to it."

New Jaguar CEO known for toughness

By Daniel Ward
STAFF CORRESPONDENT

LONDON — John Egan, 50, has stepped down as chief executive of Jaguar. He will continue as chairman until he leaves the luxury automaker at the end of June.

The head of Ford's transition team, William J. Hayden, 61, will take over both titles. Hayden is Ford of Europe's manufacturing group vice president.

Hayden

There is presently no indication of what Egan will do after leaving Jaguar.

Hayden, a tough, blunt-speaking survivor of Ford corporate life, could not be more different from his predecessor. He built his reputation the hard way, by turning around the dismal productivity of some of Ford's worst plants in Europe and successfully making the company the second-lowest-cost automaker in Europe.

The dramatic and unexpected efficiency improvements now being seen at Ford of Britain's troublesome Halewood plant testify to Hayden's doggedness.

No one messes with the former accountant, who wears a diamond-studded, 40-year Ford service badge on his tie.

Paying tribute to his predecessor, Hayden said, "In 1980 when Sir John came to Jaguar, it was on its knees. What few cars it made were of appalling quality, and the government was about to turn the lights out. He has more than trebled production over the last 10 years, introduced a new saloon (sedan) and still managed to invest half a billion dollars in new equipment. He has secured a place beside Jaguar's founder, Sir William Lyons."

Talking about his work as head of the Ford transition team, Hayden said, "What we have found has significantly pleased us, and we believe that we can make a good return on Ford's investment in the long term.

"We want to be a three- or four-model car company, and I would like to think that in 10 to 15 years, we would be making just under 200,000 cars a year. If you go beyond that, you end up with a luxury car that is being used as a taxi.

"It is key for Jaguar to have a sports car (F-type), a luxury car, a grand tourer, and it would be nice to get back to a sporty saloon."

Ford has always emphasized the benefits to Jaguar of its purchasing power. One company source revealed that Jaguar can expect to save £100 million ($162 million) a year through its link with Ford.

Cost savings are already being made in component purchasing. Hayden said it is now evident that some suppliers had been charging Jaguar very high prices. Jaguar will have a direct link to Ford's purchasing computer data base. The two companies already share 60 percent of their suppliers.

Jaguar must drag its manufacturing technology, cost control and product quality into the 1990s. Hayden may be just the man for the job.

For Jaguar management and engineers, it will be a culture shock to have a chairman who knows as much about the latest tri-axis body stamping presses as he does about supplier quality standards or purchasing.

During 10-year tenure, Sir John Egan became "Mr. Jaguar."

EGAN: *'Mr. Jaguar' emphasized dealer service and quality*

By Daniel Ward
STAFF CORRESPONDENT

LONDON — In almost exactly a decade, Sir John Egan has taken on the mantle of "Mr. Jaguar." It has become impossible to talk about the cars or the company without including its high-profile chairman and chief executive.

His legacy is considerable, and the books still to be written about the Coventry firm's rise from the ashes will be kind to the one-time petroleum engineer. He rarely made a bad decision in a tough 10-year period as chairman.

As the high points of his tenure, Egan recalls privatization of the then-BL-owned Jaguar in 1984, introduction of the XJ6 in 1986 and winning the 24-hour LeMans race in 1988.

Former shareholders will doubtless prefer to look at their bank balances and remember that Egan played his hand well in securing £8.50 (U.S. $13.68) a share from Ford Motor Co. in the November sale. The stock had been floated at £1.65 (U.S. $2.65) a little more than five years earlier.

Yet Egan's first day at Jaguar was inauspicious. The work force was on strike and, as he is apt to tell audiences, "Even the roofs leaked."

Annual sales had slumped to 14,000. Jaguar sold that number last year in Britian alone. The XJ-S

Corrections

- The slowness of sales of the Subaru Legacy may have been overstated in a photo and story in the March 26 issue. A Subaru of America Inc. spokesman had previously said the roughly 3,000 Subaru Legacys stockpiled at the Subaru-Isuzu Automotive Inc. plant hadn't been sold. But another spokesman said last week that the stockpile included 1,530 units that had already been sold to fleets but not delivered.

The story overstated the decline of overall Subaru sales through February. Sales were down 43.3 percent from year-ago levels.

- A story and table in the March 26 issue about National Highway Traffic Safety Administration 35-mph crashes had incorrect information about the passive restraint used in the Hyundai Excel 2-door hatchback. It has non-motorized seat belts.

Edsel B. Ford II

After years in secondary roles, he wants to run a profit center

By Laura Clark
AUTOMOTIVE NEWS STAFF REPORTER

DEARBORN, Mich. — When Edsel B. Ford II was studying at Babson College on the East Coast in the late 1960s, he liked to attend Trans Am races on the weekends to watch the Ford Motor Co. racing teams compete. The young Ford would walk around the track and in the pits as the full-race Mustangs flew by.

Edsel was not a casual racing fan. He focused intensely on every action of the cars on the track — so intensely that one former Ford executive remembers Ford biting his fingernails down to the quick during a race.

With that same interest, the only son of former Ford Chairman Henry Ford II is working his way to the top management echelon of the company that his great-grandfather founded and his father led for 34 years. But Edsel says he has always worked for someone else.

He was assistant managing director of Ford of Australia and general sales and general marketing manager for Lincoln-Mercury Division. Ford is now executive director of Ford's marketing staff, gathering and assimilating marketing data for the company and contributing to long-range planning.

After 12 years in middle and upper management, Ford said it is his time to run a piece of the Ford empire by himself.

"I want to run an operation; I think that the thing that is lacking in my career is having full authority of an operation," said Ford.

"I think that the only thing I need to do is run a profit center. Which profit center can be negotiated. I've been second in command a lot, and I think it's time to run something."

Meanwhile, as head of the company's worldwide marketing staff and a member of the board of directors, the 41-year-old heir feels he is gaining more insight into what makes Ford Motor Co. tick.

In his marketing staff job, Ford coordinates all customer satisfaction and market research information for the company and renders opinions on future product plans worldwide. Ford's marketing staff also has responsibility for the company's corporate advertising, the naming of products and marketing leadership.

AUTOMOTIVE NEWS/JOE WILSSENS

Edsel B. Ford II, only son of the late Henry Ford II, is executive director of the marketing staff for Ford Motor Co.

Edsel Ford recently met with the marketing staff of Ford's Asia-Pacific operation and is planning to visit Ford of Europe to meet with marketing managers to review plans for Europe. He said the job, which he has held since last July 1, has given him a more "global

Tokyo stock dip is problem for smaller makers

By Mary Ann Maskery
AUTOMOTIVE NEWS STAFF REPORTER

TOKYO — The sharp decline of the Tokyo Stock Market in recent weeks, plus the weakening of the yen, puts a question mark on ambitious automotive expansion plans of just a few months ago.

The larger companies are unlikely to be hurt unless the market remains flat for much of the year. But the smaller companies that are already struggling, like Fuji Heavy Industries, may face even more severe tests, according to analysts.

Importers who were eyeing further growth of 30 percent annually now have to consider exchange rate losses and a possible downturn in the luxury segment.

The industry as a whole is still projecting a record increase in capital investment for fiscal 1991, which began April 1. But much of that is due to ambitious plans by Toyota Motor Corp., Nissan Motor Co., Honda Motor Co. and Mazda Motor Corp. — companies that have been increasing capital spending in recent years.

But the smaller companies that cannot rely on large sales increases will now have a difficult time raising funds in the stock market. The result will be a further "acceleration in the division between the haves and the have-nots" among the Japanese makers, according to analyst Neal Doying of Baring Securities.

Until now, there has been an almost free-for-all environment, where money could be raised at will through warrants and convertible bonds. Doying estimated that since 1985, the 11 Japanese auto firms raised about $13.4 billion in the stock market. Even Toyota, which has no shortage of cash, raised $1.5 billion last year.

Japanese companies were raising funds at an average of 3 percent interest compared to 11 percent for American companies.

Much of that money is now being put into plant renovation and increased automation. Nissan estimates its capital investment for the fiscal year ended March 31 at 150 billion yen ($967.7 million) and is projecting investment of 200 to 250 billion yen ($1.29 to $1.61 billion) a year for the next two years.

The cost of a new plant in Kyushu is estimated at 100 billion yen ($645 million) over two years. Nissan is also planning to increase automation on final assembly up to 25-30 percent.

Much of the incentive to increase automation is the need to compensate for a labor shortage rather than to cut costs. It may take three to five years to recoup costs.

Nissan recently developed what it calls an "intelligent body assembly system," which makes body assembly more efficient, more flexible and more precise. Ultimately, it should also bring a reduction in the work force and in basic re-tooling costs, since only computer programs will have to be changed, not entire jigs.

Nissan has installed the system, which costs 1 billion to 2 billion yen ($6.5 million to $13 million), in two plants and plans to install it in three others in Japan. The system also will be installed in the Smyrna, Tenn., plant in two to three years.

But even the "haves" may be in for a more difficult time than they are yet willing to admit. Analyst Koji Endo of Nomura Securities said he expects to see a decline in capital investment in the coming year, perhaps as much as 20 percent despite company assurances to the contrary.

Endo also suggests much less growth in the domestic market and a possible deceleration in the luxury market.

Price may not be a major factor for most Japanese buyers of imported cars, but the stock market tumbled just as all the West German makers raised prices.

The exchange rate has not yet affected American models. But the dollar has risen 15 to 20 points against the yen since last fall, and analysts expect it will soon reach 160, perhaps 170, and stay at that level for much of the year.

It's auto mall with barbers, baby sitters

By Arlena Sawyers
AUTOMOTIVE NEWS STAFF REPORTER

As the saying goes, most people would rather go to the dentist than visit a car dealership. Ronald D. Ertley is out to change that. He believes that buying a car or having it serviced should be more akin to being pampered at a salon than to having teeth pulled.

The Ertley Dealerships auto park, which he plans to open in Wilkes-Barre, Pa., later this year, will feature a beauty salon, a barber shop and baby-sitting service in addition to housing nine of his 14 car franchises and its used-car operation under one roof.

Ertley said the purpose of the customer hospitality center is to give customers the option of having their hair care needs fulfilled while waiting for their car to be serviced or providing child care while they shop for a new car.

He said at least 50 percent of his customers are repeat buyers, and he believes that enhancing the dealership experience will keep them coming back.

"We're not doing this because we have big egos," said Ertley, a third-generation car dealer. "We want to keep our customers within our corporate confine.

"Our purpose isn't to make money, but to offer a service. We want to make it fun."

The nine brands to be housed in the auto park are Oldsmobile, Cadillac, Mercedes-Benz, Volvo, Honda, Toyota, Mitsubishi, Hyundai and Acura. Ertley also has Chevrolet, Geo, Pontiac, Buick and GMC Truck franchises located about four miles west of the park in Kingston, Pa.

Ertley plans to break ground on the project early this month, and expects to have it up and running by the end of the year. He declined to disclose how much he is investing in the project.

The park will be open seven days a week, but on Sunday it will be

Toyota praised for minority hiring at Kentucky plant

By Lindsay Chappell
AUTOMOTIVE NEWS STAFF REPORTER

GEORGETOWN, Ky. — An affirmative action program appears to be helping Toyota Motor Manufacturing U.S.A. Inc. avoid the rap that transplant automakers aren't hiring enough minority workers.

The company is receiving kudos from local humanitarian groups for its hiring efforts at the 2-year-old Camry plant near Lexington, Ky.

Toyota reports that nearly 14 percent of its 3,150 employees are minorities — non-white men and women, not including a small base of Japanese workers. That's more than double the percentage of minorities living in the Lexington area.

In March, Toyota was honored by the National Conference of Christians and Jews in Lexington.

"It's commendable that Toyota would achieve what it has, especially considering that it's a relatively new company here," said Jesse Crenshaw, president of the Lexington-Fayette NAACP. "Some companies have been around here a long time and don't have numbers like that."

Minority-hiring policies have been a source of trouble for some Japanese companies in the United States. Two years ago, Honda of America Manufacturing Inc. was ordered to pay $6 million to 377 blacks and women for discriminatory hiring practices at its Marysville, Ohio, plant.

A study published at that time by Robert Cole of the University of Michigan's business school rapped the transplants for a poor record in hiring blacks. But Cole believes the situation is improving.

"You're seeing substantial change in minority hiring at the transplants," Cole said. "It's largely because of all the negative public attention they received."

Honda's Ohio operation has increased its minority employment to 10.6 percent of its 9,000-member work force, from 2.8 percent three years ago.

Sam Heltman, Toyota's vice president of personnel, said the Kentucky plant sought to avoid problems from the outset by involving local minority organizations in establishing its hiring policies.

At other transplants, Nissan Motor Manufacturing Corp. U.S.A. in Smyrna, Tenn., says minorities make up 17.6 percent of its 3,200 employees. At Mazda Motor Manufacturing (USA) Corp. in Flat Rock, Mich., the figure is 18.7 percent of 3,500.

Diamond-Star Motors Corp. does not release demographic information about its plant in Normal, Ill.

Ford to increase use of van pool firms

By Joseph Bohn
AUTOMOTIVE NEWS STAFF REPORTER

Ford Motor Co. plans to distribute virtually all van conversion chassis through authorized consignment pool companies within three years.

James M. Ludlow, Ford Division truck sales promotion manager, said virtually all E-150 Econolines and Aerostars equipped for van conversion will go through authorized pool accounts by late 1992. Today, only about half do.

Ludlow said the move was designed to create a closer relationship with companies building Ford brand van conversions.

He added that Ford will be "better able to exercise quality assurance measures" for higher product quality and greater customer satisfaction.

Unlike Chevrolet, which undertook a similar change in only a few months, Ford is phasing in its program change to allow orderly transition for those businesses presently involved in the sales and distribution of Ford van conversions, but which are not currently members of the Ford consignment pool, Ludlow said.

Jerome Mittman, Ford Division RV sales manager, added that Ford Motor Credit Co. will begin taking over financing of such vehicles "within the next few months."

Ford Credit already is reviewing the financial condition of current pool accounts and those applying for admission to its consignment pool.

Companies applying for admission to Ford's pool system are also being reviewed by Ford's engineering department, by the company's RV department and through feedback from the division's district sales offices, dealers and customers.

Mittman said there is no target on how many additional companies will be admitted to the pool. Ford currently has about 60 authorized pool converters.

It will admit as many as it takes to "give us adequate representation in the marketplace and an appropriate share of market," Mittman said.

About 200 companies have applied, though not all of them are under active consideration, Mittman added.

Most recently named to Ford's pool were Advantage West Corp. of Tempe, Ariz., which was formerly a part of Rockwood Corp.; Mark III Industries of Ocala, Fla.; Quality Coaches of Elkhart, Ind.; and Vehicle Concepts Corp. of Bristol, Ind.

Vehicle Concepts is primarily a Class B van camper manufacturer, but it also does van conversions.

Those new firms, together with four other recently reported additions, bring to eight the number of new accounts Ford has approved in the past few months.

Mittman estimated that by 1992, 90 to 95 percent of Ford's chassis will go through official, Ford-approved converters.

In 1992, Ford may still allow some additional companies that meet all its criteria, except possibly the financial criteria, to continue to purchase conversion chassis through its dealers, Mittman added.

"But we would have to approve them for receipt of our chassis, even under that program," he added.

That program is designed to continue to allow young companies to enter the van conversion business and not automatically exclude them because of their size.

Sales rise for van conversions

By Joseph Bohn
AUTOMOTIVE NEWS STAFF REPORTER

The van conversion market is rebounding strongly from its winter doldrums, according to Detroit chassis suppliers and van converters.

The chassis supply is adequate right now, according to Chevrolet and Ford officials. But some observers feel that if the market continues to increase as it has, there could be shortages by summer.

"It's booming right now. The business is excellent, both on the retail and wholesale side. We're running to keep up," said Jim Greene, Chevrolet's assistant RV manager.

Greene said Chevrolet isn't short on chassis, but is just keeping even with market demand.

Jerome Mittman, Ford Division RV sales manager, also described demand for the company's conversion chassis as "very strong."

Gary Soos, vice president of marketing for Kentron Inc. of Elkhart, Ind., said business is "considerably better than it has been for the past six, seven months."

"If the market continues growing like it has over the past 30 to 60 days, I can see where we as an industry could have a chassis shortage by summer," he said.

Of course, the market rebound has been particularly good for converters. They no longer have to place large incentives on their products to move them.

"The whole business is exciting again," Soos said.

Kentron is the parent company for U.S. Conversions, Premier Editions, Regal Editions and Ram Coach — brand names under which it produces and markets Chevrolet, GMC, Ford and Dodge conversions.

Kentron also has noted a sharp increase in the Chevrolet and GMC pickups and Suburban conversions at its Mansfield, Texas, plant. Soos said he expects to convert more than 400 pickups and Suburbans in the next three months.

One of the exciting new products hitting the conversion market right now is GM's extended-wheelbase M-van. It has been well received by converters.

GM recently enhanced the appeal of the extended Chevrolet Astro and GMC Safari by including it under a more general minivan rebate. The vans qualify for a $500 consumer rebate through May 2.

They are another reason why Chevrolet officials are adamant about keeping Astro in the conversion market for the foreseeable future.

Ford has indicated the likelihood of discontinuing its Aerostar minivan as a conversion item by the 1992 model year. But Aerostar has never been a big conversion unit.

By contrast, Astro accounted for about 35 percent of Chevrolet's total van conversions in calendar 1989.

Appointments, TV series star at RVIA gathering

SCOTTSDALE, Ariz. — The Recreation Vehicle Industry Association mapped out plans for a new RV travel series and announced new member appointments at its annual meeting.

Landers

Humphreys

Jay Landers was named director of government affairs for RVIA. He will work with Dianne Farrell, RVIA's vice president of government affairs, in promoting the interests of the RV industry among state legislators, regulators, policy makers and other officials.

David J. Humphreys, RVIA president, was appointed first vice chairman of the Travel Industry Association of America.

The association is the umbrella organization for all segments of the travel and tourism industry. Humphreys previously served as the organization's second vice president.

A new travel television series being developed by RVIA in cooperation with The Nashville Network will be introduced in July if seven special RV industry sponsorships being offered through the association are sold by April 15.

Planning is still in the preliminary stages for the series which would succeed "Wish You Were Here," the industry's first TV venture.

The new show's format would continue to focus on RV travel destinations and the RV lifestyle, but with a new host couple yet to be signed.

Centurion's customized "Ranger Dually"

Centurion Vehicles Inc., White Pigeon, Mich., has a new dual-rear-wheel version of Ford's Ranger pickup. It features two standard equipment levels and a variety of options.

'89 shipments decline

But value, price rise for van conversions

By Joseph Bohn
AUTOMOTIVE NEWS STAFF REPORTER

Although wholesale van conversion shipments were off slightly in calendar 1989, the value of those shipments and their average price increased solidly.

Wholesale conversion sales are projected to set a record in 1990.

Indiana and Florida continue to be the two fastest-growing sources of van conversion production, and the East North Central region — led by Ohio, Michigan and Illinois — is the biggest purchaser of upfitted vans, according to the Recreation Vehicle Industry Association.

Van conversion shipments totaled 200,400 last year, down 1.86 percent from 1988.

The total value of the 1989 shipments was $3.7 billion, 4.85 percent more than the previous year, according to RVIA.

The average wholesale unit price of a van conversion jumped 6.83 percent to $18,453 in 1989, RVIA said.

Indiana continued as the largest van-conversion-producing state, followed by Florida, Georgia, California, Texas and Michigan.

The five states that make up RVIA's East North Central region continue to be the best market for upfitted vans. The states are Ohio, Michigan, Illinois, Indiana and Wisconsin.

Buyers in the East North Central region purchased 31.40 percent of all upfitted vans, followed by the South Atlantic region with 14.81 percent and the West South Central region with 10.26 percent.

RVIA's South Atlantic region consists of Delaware, Florida, Georgia, Maryland, North Carolina, South Carolina, Virginia and West Virginia.

The West South Central region is composed of Arkansas, Louisiana, Oklahoma and Texas.

Among individual states, Ohio accounted for 9.85 percent of all van conversions purchased last year, followed by Michigan with 7.55 percent and Illinois with 6.88 percent.

Californians purchased 6.51 percent of conversions, and Texans bought 6.44 percent. Some 6.35 percent of vans were shipped outside the United States.

John W. DeWolf, economic consultant to RVIA, forecast that van conversion shipments will set records of 207,000 in 1990 and 228,000 in 1991.

VAN OUTPUT LEADERS

State	1989	1988

Florida	19.92	17.61
Georgia	6.83	6.62
California	5.94	6.24
Texas	4.54	4.03
Michigan	3.98	5.59
Others	16.71	22.21

RV BRIEFS

Ford re-rates chassis

DEARBORN, Mich. — Ford Motor Co. boosted the weight-carrying capability of its F Super Duty motor home chassis by 1,000 pounds to 17,000 pounds gross vehicle weight.

Jerome J. Mittman, Ford Division recreation vehicle manager, said the increased gvw rating would allow the chassis to accommodate larger and heavier motor homes.

The increased rating resulted from field tests which indicated the chassis could carry more than its original rating. There were no changes in chassis components nor any other type of re-engineering on the chassis to achieve the higher rating.

Therefore, body builders can re-rate any 16,000-pound gvw Ford chassis they may have already had in stock.

Mittman added that the Super Duty motor home chassis has few components in common with the Super Duty commercial chassis which Ford sells for wreckers and other body applications.

He did not anticipate the latter getting a gvw rating boost.

"Just because we upgrade the one, does not mean we'll upgrade the other," Mittman said. "They have a different duty cycle."

Midwest RV show set

ELKHART, Ind. — The drawing for space at the 1990 Midwest Manufactured Housing and Recreational Vehicle Show will be held here April 25 and 26.

RV manufacturers will choose their space the morning of April 26, while RV suppliers will take their turn in the afternoon.

Able acquisition

ENNIS, Texas — Able Enterprises Inc. has purchased the assets of Fashion Interiors Inc. of Fort Worth, Texas.

Able, a major manufacturer of windows and window coverings for the van and RV markets, has added Fashion's shades to broaden its product line.

Auto trade deficit declines despite increase for Japan

WASHINGTON — Despite increased U.S. production by Japanese automakers, the value of automotive imports from Japan increased last year.

But the increase was not enough to offset a decline in the value of imports from other parts of the world, including Canada. As a result, the U.S. automotive trade deficit shrank 4.4 percent in 1989.

Year-end statistics from the U.S. Commerce Department show the value of imports dropped 2.6 percent from 1988, while the value of U.S. exports increased 5.1 percent. The result was a U.S. trade deficit in passenger cars and light trucks of $41.6 billion for 1989, down from $43.55 billion in 1988.

According to Dennis Rapkins, automotive analyst for the U.S. International Trade Commission, the number of vehicle imports fell "largely because U.S. production by Japanese-owned automakers increased and continued to replace imports from Japan."

"Japanese producers also proceeded to shift their mix of exports to the United States to upper line cars, resulting in an increase in the unit value of imports from Japan," he added.

Japan shipped 2.05 million passenger cars to the United States last year with an estimated value of $20.15 billion. In 1988, Japan sent 3.4 percent more passenger cars to the United States, but their value was 1.4 percent lower than in 1989.

The other key to lower imports in 1989 was Canada, Rapkins said.

"The Big 3 experienced an overall decrease in sales in the U.S. market during 1989, which led to a decline in U.S. imports of their Canadian-made autos," he said. The number of Canadian autos imported during 1989 fell 3.4 percent.

U.S. export performance was mixed for the year. While the value of exports rose 5.1 percent, the number of cars and trucks exported declined 2.9 percent.

Rapkins explained that the number of U.S. auto exports declined slightly as "the Canadian auto market, which is by far the largest market for U.S.-made autos, paralleled the U.S. market and remained relatively soft."

He said the value of exports increased because the vehicles that were exported were priced higher than in 1988.

The big loser among importers for the year was Yugoslavia. The value of its U.S.-bound shipments declined 90.8 percent for the year. Those numbers are reflected in a dramatic decline in Yugo sales.

France, South Korea and West Germany also sent fewer cars to the United States in 1989.

The value of French shipments was down 65.7 percent. Peugeot sales were flat, and imports of the Renault-built Eagle Medallion were discontinued.

Imports from South Korea were down 36 percent. Ford Festiva sales were flat last year, but Hyundai and the Pontiac LeMans suffered.

Every West German maker experienced a sales decline in the United States last year, and the result was a 22.1 percent drop in value of West German shipments.

In December, the value of exports fell 14.8 percent compared to December 1988, while imports declined 13.5 percent for the month.

The December trade deficit showed a 13.3 percent improvement because the decline in import value was from a much higher base. The total value of imports for the month was $4.5 billion compared to only $687 million in exports.

Much of the drop in import activity for the month was due to large ddeclines in the value of car shipments from West Germany, 48.1 percent; South Korea, 57.5 percent; France, 96.5 percent percent; and Mexico, 54.8 percent. The value of imports from Japan was off 8.2 percent for the month, while the value of shipments from Canada increased 5.6 percent.

Japan sends buying execs to Las Vegas parts talks

By Lindsay Chappell
AUTOMOTIVE NEWS STAFF REPORTER

In an effort to soothe growing U.S.-Japanese trade tensions, Japan's automakers are sending 150 of their top purchasing officials on an unprecedented parts-sourcing mission this week in Las Vegas.

The gathering will put top executives from 50 U.S. parts firms into closed meeting rooms with key purchasing officials from all 11 Japanese car and truck makers.

A number of the Japanese vehicle makers are sending powertrain-sourcing executives. The step indicates Japan's new interest in increasing its small purchases of high-value U.S. engine and transmission componentry.

The three-day summit comes just as some U.S. suppliers are calling for "Super 301" protection of the auto parts industry — a drastic measure that would essentially hold Japan's government accountable for what is seen as inadequate U.S. sourcing by Japanese makers.

Not all parts makers believe such steps are necessary. But a number of prominent suppliers complained before a Commerce Department hearing in February of continuing difficulty in penetrating the Japanese original-equipment supply market. Several industry officials urged Commerce to apply greater pressure on Japan to open its automotive supply trade.

William Raftery, president of the Motor and Equipment Manufacturers Association, called the Las Vegas meeting "a more positive effort to bring the U.S. and Japanese industries closer together."

MEMA, an 800-member U.S. automotive trade group, is cosponsoring the meeting with the Japan Automobile Manufacturers Association. Officials from the U.S. Department of Commerce and Japan's Ministry of International Trade and Industry — the powerful office that governs foreign business activity — will attend as observers.

More than 200 top U.S. executives from 50 firms are planning to attend, according to Raftery. He said at least 150 other U.S.-based suppliers were turned down because of space limitations.

Impulse debut ends Isuzu passenger car hiatus

By Kristine Stiven Breese
AUTOMOTIVE NEWS STAFF REPORTER

In look and feel, American Isuzu Motors Inc.'s new 1990 Impulse XS bears little resemblance to its predecessor.

Touting "European design touches," a redesigned engine and Lotus-tuned suspension, Isuzu says the car is different than the General Motors badged Geo Storm, although the cars share the same platform.

The first-generation Impulse has been out of production for nearly a year. The introduction of the 1990 Impulse XS marks Isuzu's return to the U.S. passenger-car market.

The front-wheel-drive XS carries a 1.6-liter 4-cylinder engine with 16 valves and dual overhead camshafts. The high-revving engine produces 130 horsepower at 6800 rpm and 102 pounds-feet of torque at 4600 rpm.

It is available with either a 4-speed automatic or 5-speed manual transmission. The automatic carries a base price of $12,744, the manual starts at $11,999.

Four-wheel disc brakes, with ventilated fronts, are hydraulically powered. A driver's-side airbag is also standard.

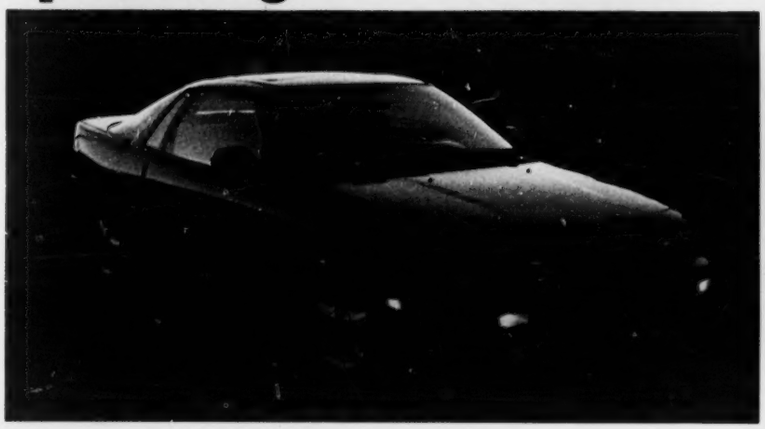
Isuzu Motors Ltd. solicited Lotus' help with earlier Impulse and I-Mark models. For the new XS it relied on Lotus for calibration of spring rates, shock damping, roll bar diameter and suspension bushings.

Four-wheel independent suspension utilizes MacPherson struts with low pressure gas-filled shock absorbers. In addition, Isuzu claims stability is enhanced by a steering rack that is rigidly mounted to the front cross member, rare for a fwd car.

Factory options include air conditioning, an upgraded stereo, aluminum alloy wheels and a sport package that includes fog lamps, cruise control, a stereo equalizer and power windows and door locks.

Design changes, such as semi-concealed headlamps, concealed door handles and a rear lip spoiler, give the car a capsule-like appearance and a 0.31 coefficient of drag.

The upcoming Impulse RS high-trim model will be turbocharged, all-wheel-drive and fuel-injected. The RS is due out this fall as a 1991 model.



The standard 1.6-liter engine in the 1990 Impulse also will power the 1991 Lotus Elan base model.

IMPULSE FOR 1990

Model	Wheelbase (inches)	Length (inches)	Width (inches)	Height (inches)	Weight (pounds)	Engine size & style	Drive type	Body styles
Impulse XS	96.5	166.0	66.7	51.1	2,411	1.6-liter 4-cyl.	fwd	2-dr hb

Canadian car-truck sales tumble 11% in February

By Bill Vance
SPECIAL CORRESPONDENT

TORONTO — After a surprisingly strong January, Canadian car and truck sales fell 11.16 percent in February.

As in recent months, imported vehicles fared better than domestics.

Among the domestic automakers, Chrysler Canada Ltd. suffered the worst loss in car sales, dropping 15.97 percent. It was followed by General Motors of Canada Ltd., down 14.57 percent, and Ford Motor Co. of Canada Ltd., off 12.80 percent.

Canada's stubbornly high interest rates, driven by a 14.25 percent prime, were again blamed for sluggish sales.

"February sales reflect market uncertainty about the federal budget measures and interest rates," said Udo Kaul, Ford's general sales vice president.

Ford continued to offer incentives on certain models. Interest rates on the Escort, for example, were as low as 6.9 percent for 12- to 24-month contracts.

Although 11 of 18 car importers were down in February, total import car sales slipped only 1.07 percent.

Three of the top four car importers posted improvements for the month, led by Honda's 40.15 percent gain. Volkswagen's new pricing policy helped it achieve a 17.33 percent sales increase.

On the light-truck side, the domestics declined 20.23 percent. Imported trucks picked up 11.35 percent over the same month last year.

CANADIAN CAR AND TRUCK SALES

Domestic cars	Feb. 1990	Feb. 1989	2 mos., 1990	2 mos., 1989
General Motors	18,086	21,170	35,779	38,473
Ford	9,682	11,103	19,264	21,612

Vickers, Rolls-Royce parent firm, offers $263 million for Cosworth

NEW YORK — Vickers plc, the parent company of Rolls-Royce Motor Cars Ltd., plans to acquire Cosworth Holdings Ltd. for £163.5 million ($263.2 million).

Cosworth is best known for the development and manufacture of racing engines, particularly with Ford. Its other customers include Mercedes-Benz, Jaguar, Aston Martin, Maserati and Rolls-Royce.

Cosworth, part of Carlton Communications plc, made a profit of about $23 million on sales of about $85.5 million in the fiscal year ended Jan. 31.

Founded in 1958 by a team of engineers, including the present chairman, Michael Costin, Cosworth employs about 700 people. Headquartered in Northampton, England, it has additional operations in Worcester, England, and Los Angeles.

According to a Vickers statement, the present Cosworth management team is expected to remain for the present. Michael Dunn, engineering director of Rolls-Royce Motor Cars, will become part-time chairman of Cosworth.

Vickers shareholders are expected to vote on the proposed acquisition April 26.

Magna reports second-quarter loss

MARKHAM, Ontario — Magna International Inc. lost $186.6 million (U.S. $158.7 million) in the second quarter of fiscal 1990 and has appointed three outside directors to oversee the restructuring of $1.1 billion (U.S. $935 million) in debt.

The loss for the quarter that ended Jan. 31 compares with net income of $13.2 million (U.S. $11.2 million) in the year-ago period. Canada's largest parts supplier now has lost $196.5 million (U.S. $167.1 million) for the first half of the year, compared with profits of $18.6 million (U.S. $15.8 million) a year ago. First-half sales were down 2.1 percent to $891.3 million (U.S. $757.9 million).

Magna attributed the decline to lower production volumes caused by an overall industry slowdown.

The company said it will sell some "problem plants," which collectively are losing $60 million to $70 million (U.S. $51 million to $59 million) a year on operations.

Magna also said it will negotiate price relief from customers.

In a cost-cutting effort, the company has already closed a restaurant. Other steps will include the sale of Magna's company airplane and discontinuation of publishing activities, including *Vista* magazine.

CAFE

FROM PAGE 1

Ford Motor Co., whose rating increased by 0.1 mpg to 26.5, the CAFE standard for the 1989 model year.

Chrysler Motor's CAFE dropped 0.5 mpg to 27.9 mpg last year. General Motors' fell by 0.4 mpg to 27.2 mpg. The average CAFE for imported cars dropped by 0.8 mpg between 1988 and 1989. Thirteen of the 24 imported fleets — including all 10 sold under Asian nameplates — were less fuel efficient, NHTSA said.

Automakers say fuel-economy is declining because they are responding to the market's demands.

"Buyers really want to pick up a car with a few more options and features that tend to reduce fuel economy," said David L. Kulp, manager of fuel economy planning and compliance at Ford.

Also dragging down mileage are new safety features, including federally mandated passive restraints, that on average add 100 pounds to a vehicle, Kulp said.

Passenger car weight could also increase further with passage of a new clean air bill because carmakers might have to add equipment, such as systems to capture gasoline fumes during refueling, to further curb emissions, Kulp said.

Another factor in the declining CAFE levels is the low price of fuel. With gas selling at $1 a gallon, a buyer who opts for a car that gets 40 mpg rather than 30 mpg will save only $83 a year on gas, according to David Cole, director of the Office for the Study of Automotive Transportation at the University of Michigan. To squeeze 10 mpg more out of a car, a manufacturer may have to charge $1,000 more for adding technological innovations.

A 40-mpg CAFE could become reality if some Senate leaders have their way. Sen. Richard H. Bryan, D-Nev., is expected to reintroduce CAFE legislation this month similar to provisions thrown out of the Senate's version of the clean-air bill. Bryan agreed not to include CAFE as part of the bill only because powerful senators promised their support for a separate CAFE bill.

The EPA said that if current trends continue, all Asian automakers except Mitsubishi, Suzuki and Daewoo (which makes the Pontiac LeMans) will have CAFEs below 25 mpg by 2000. The current standard is 27.5 mpg.

Bryan and his supporters say that fuel economy can be increased by the use of multivalve engines, overhead cams, automatically controlled transmissions and front-wheel drive.

The imports already widely employ many of those technologies. The domestics are admittedly behind. Only GM, for example, has its own multivalve engine.

Kulp believes the fuel savings benefits of multivalve and other so-called fuel-saving technologies are highly exaggerated, at best half of what has been estimated.

"If technology doesn't get you there (to CAFE), you readust the mix and pricing to make up the difference," Kulp said.

"But we already have to use a lot of incentives and tools to sell enough small cars to offset large cars. This is one reason why the new Escort must succeed," he said, referring to the new version of the popular subcompact, which has just gone into production.

Toyota also said it will be difficult to move ahead further. "We have already done the things they have outlined and we can't see getting anywhere near the goals being tossed around," said James Olson, vice president of external affairs for Toyota Motors Sales USA.

According to the NHTSA study, CAFE levels for imported light trucks fell 2.3 mpg for manufacturers using the 4-wheel-drive standard and 0.6 mpg for truckmakers using the composite standards. NHTSA sets a 2-wheel drive standard, but no manufacturers use it.

Domestic light-truck manufacturers chose to comply with the composite CAFE, and the total light-truck fleet CAFE fell 0.2 mpg, to 20.4 mpg. The standard is 20.5 mpg.

One imported light-truck manufacturer, Range Rover, fell short of the 19-mpg 4wd CAFE standard. Its rating was 16.7 mpg. Two domestics fell short of the composite standard of 20.5 mpg. Ford achieved a 20 mpg CAFE, and GM's was 20.4 mpg.

CHANGES IN CAFE

Corporate average fuel economy performance by manufacturer, 1988 and 1989 model years

Judge tosses suit on Ford transmission

WASHINGTON — A federal district judge in Washington has dismissed a 10-year-old park-to-reverse suit against Ford Motor Co. The proposed class action involved certain 1976-1980 Fords whose automatic transmissions allegedly slip from park to reverse.

In dismissing, Judge June L. Green described the case as a "trial court's nightmare of a litigation monster."

A NHTSA investigation never isolated a specific defect.

Automakers revise incentives

Ford rebates up; Chrysler guarantee stays; V-6 free in Lumina

By Arlena Sawyers
AUTOMOTIVE NEWS STAFF REPORTER

Ford Motor Co. sweetened its factory-to-customer incentive program last week by increasing rebates on six car and truck lines and adding new alternative financing programs.

Also last week, Chrysler Corp. extended its retail guaranteed rebate program, and Chevrolet and Cadillac announced new buyer incentives.

Expiring last week were Chrysler Corp.'s dealer incentive on Chrysler's TC by Maserati and several importers' incentive programs.

Ford revised retail cash rebates are as follows on these 1989 and 1990 vehicles:

Ford Thunderbird and Mercury Cougar, $1,500 (up from $1,000); Ford Taurus and Mercury Sable, $1,000 (up from $750); Ford Aerostar, $750 (up from $500); and Ford Bronco II, $1,500 (up from $1,000).

Buyers of 1989 and 1990 2.3-liter Ford Escort, Probe and Mustang are offered a choice of $1,000 in cash or $750 in cash plus 6.9 percent financing for up to 48-month contracts or 10.9 percent for 60-month contracts.

Buyers of 1989 and 1990 Escorts are offered another alternative of 2.9 percent financing for contracts up to 48 months or 8.9 percent for 60 months.

Ford's program expires April 30.

Retail customers who purchase 1990 Chevrolet Lumina coupes and sedans may order the 3.1-liter V-6 engine at no extra charge.

The manufacturer's suggested retail price of the V-6 is $660.

The engine offer is in addition to Chevrolet's current retail cash rebate of $1,000 on Lumina models. The program expires May 2.

Cadillac is offering rebates of $1,500 to $2,000 on all 1990 models except Allante.

Buyers of DeVille, Fleetwood and Brougham receive a $1,500 cash rebate. Buyers of Eldorado and Seville receive a $2,000 rebate. The program runs through May 31.

In a promotion with Avis Rent-A-Car, persons who test drive a Cadillac from April 7 to April 15 will receive a certificate for a free weekend rental from Avis through June 30.

Chrysler's guaranteed rebate program has been extended until May 31.

Under the program, Chrysler pays the difference to customers if rebates on covered vehicles are increased during the 1990 model year.

It has been in effect since December.

Chrysler ended its factory-to-dealer $6,000 incentive on its 1989 Chrysler's TC by Maserati on March 30.

Customer and/or dealer incentive programs expired March 31 for American Isuzu Motors, Mitsubishi Motor Sales of America Inc., Sterling Motor Cars and American Suzuki Motor Corp.

Europe seeks limits on Japan exports

By Mary Ann Maskery
AUTOMOTIVE NEWS STAFF REPORTER

TOKYO — European Commissioner Frans Andriessen came to Japan to sound out the Japanese on how to admit — or rather, how to limit — Japanese exports to the European Community after 1992.

Basically, the Europeans are looking to the Japanese for a voluntary agreement to limit or postpone a Japanese export push.

The conclusion was an agreement to hold "exploratory talks" on how to set up a system that would lead to a liberalized market "by a fixed term." There was no agreement on how long the fixed term would be.

The most sensitive issue, whether to include the output of transplants, was not brought up. Andriessen said transplants would be accounted for in one way or another during a transition period, but that would be discussed later. The length of the transition period is also a matter for discussion.

Andriessen said his message to the Japanese was the need to achieve a "gradual and progressive liberalization of the European market within a time frame" by monitoring Japanese exports to the European Community. He described it as a delicate issue.

Andriessen went into the talks with three points:

- A car made in Europe is European, and the commission would not make any proposal for regulations on local content.
- U.S.-made Japanese makes were not an issue, because the commission did not expect to see much volume from U.S. transplants.
- Japanese vehicles made in Eastern Europe would not be considered a problem either.

Andriessen will report to the commission, which still has to reach a decision on how the community will settle internal differences on Japanese exports.

The U.S. government, which has been holding more talks with the Japanese on auto parts, has no more progress to report than the Europeans. Although the Japanese negotiators have put the proposals they made in the November market-oriented/sector-specific talks into more specific language, the American side is still not satisfied.

So far, according to American representatives, the Ministry of International Trade and Industry is still proposing more forums for better communications. The American side is still looking for more sales receipts.

EGAN

FROM PAGE 2

was about to go out of production for six months because there were no orders. "People in BL didn't give it a chance of survival," Egan said.

Product quality was disastrous. Egan got Jaguar's handful of engineers to work with suppliers to improve quality. Unfortunately, at one time that left only 13 working on the replacement for the XJ6.

It was not long before Egan was leading the company's attack on poor British workmanship. He had the sense to realize that if you keep talking about quality, people will eventually believe you have a quality product. The reality was that Jaguar's quality improved from poor to mediocre.

The company was never going to have the cash to "engineer" its way out of the bad quality hole. Egan realized that dealers must be able to offer the highest standard of service. Then, if there were faults, customers would not be perturbed. He was proved right.

The chairman visited dealers and listened to their problems.

Gene Fisher, chairman of the Jaguar National Dealer Advisory Council and the owner of Overseas Motors in Fort Worth, Texas, said American dealers will miss Egan.

Egan made a special trip to the United States in the fall of 1988 to visit a new Jaguar facility Fisher had built in Dallas, plus a new $2.5 million facility in Lebanon, Pa., that had been built by Ladd-Hanford Jaguar-Volvo.

"He always made himself available to the dealer body, and he was highly thought of," Fisher said.

"I have nothing but compliments for the way he took them from basic extinction to the way they are today. He's an excellent man, and we'll miss him," he said.

In reality, Jaguar had major problems that were cleverly prevented from tarnishing the company's rejuvenated reputation. Productivity at the antiquated plants improved only marginally, and Egan invariably angered rather than encouraged the work force.

The launch of the XJ6 in 1986 was two years late, but the car still had quality problems.

For their part, German executives are amazed at what Jaguar has achieved with such meager resources. Egan believed Jaguar had to be making 50,000 cars a year to be a contender in the luxury market. It meant pushing sales too hard in the United States, making Jaguar vulnerable to exchange rate swings.

Egan was justifiably proud of the new research and development center that was funded by the higher production. But the company still has only a fraction of the engineers of BMW and Mercedes-Benz.

When Ford stepped in, Egan reminded himself that he is a professional businessman, not a dedicated car man. He has chosen to seek the independence he enjoyed at Jaguar. He has had a number of job offers.

Automotive News Staff Reporter Jim Henry in New York contributed to this report.

Gulfstream deal

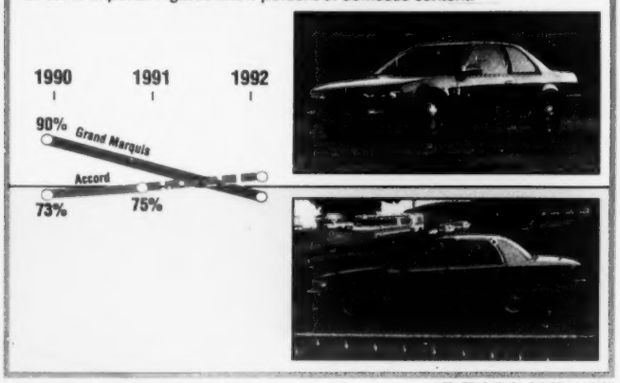
HIGHLAND PARK, Mich. — Chrysler Corp. has completed the sale of Gulfstream Aerospace.

Chrysler sold the commercial aircraft manufacturer for $825 million to a corporation formed by Allen Paulson and affiliates of Forstmann Little & Co. Paulson was chairman of Gulfstream when the company was sold to Chrysler for $637 million in 1985.

Paulson, who founded Gulfstream in 1978, is chairman and chief executive officer of the new corporation.

Import or domestic?

For CAFE purposes, EPA considers cars with 75% or more North American content to be domestic cars. Next year, Honda Accord will become a domestic, and in 1992 Mercury Grand Marquis (and Ford Crown Victoria) become imports. Figures show percent of domestic content.



AUTOMOTIVE NEWS / CHRISTINE BEEVER

CONTENT

FROM PAGE 1

The government makes a distinction between domestic and import fleets for corporate average fuel economy purposes. Cars with less than 75 percent U.S. and Canadian content are counted as imports; those with 75 percent or more are domestics.

If the current Accord were a domestic car, it wouldn't meet CAFE rules. The 1990 model falls below the 27.5-mpg standard, with the manual transmission model rated at 26 mpg and the automatic at 24 mpg, according to Honda.

But Honda's domestic CAFE rating will include the Accord and the more fuel-efficient Civic in the 1992 model year. And any CAFE violations by the Accord could be offset by credits achieved if the domestic Civic and Accord exceed the standard in subsequent years.

Nelson said the company is considering ways to increase North American content to 82-85 percent for the Accord and the Civic. The Accord currently has 73 percent domestic content and the Civic 71 percent, according to the company.

Nelson said there is no specific timetable for reaching 85 percent. Uncertainty about future CAFE regulations is a major concern.

Congress is debating various plans to increase CAFE standards. One plan, to impose a flat percentage increase for import and domestic fleets alike, could prove difficult for importers, who say many of their smaller cars are about as fuel-efficient as they can get. Nelson said reaching 82 to 85 percent domestic content "depends on the outcome of the CAFE question."

While Honda pushes for 85 percent, Ford Motor Co. will reduce the domestic content of its big Crown Victoria and Grand Marquis for the 1992 model year from about 90 percent to less than 75 percent. The change will improve Ford's domestic CAFE rating by pushing the fuel-thirsty cars into its imported fleet, which easily exceeds the standard.

Volkswagen of America Inc. achieved the 75 percent mark for its Pennsylvania-built cars in the 1983-86 model years.

Because VWoA built fuel-efficient cars in the United States, its "domestic" cars easily met federal standards, while its European-built models, including Audis, didn't. VWoA successfully petitioned for an exemption from having to meet separate CAFE standards for its imported and domestic fleets.

Honda could apply for such an exemption. But there are conditions that have to be met, including evidence that such a move would not decrease U.S. employment.

AUTO PARK

FROM PAGE 3

open only for browsing. On that day, sales personnel will be replaced by "greeters," who will serve refreshments and create a pressure-free environment in which customers can browse.

Greeters will be knowledgeable about product and will talk about anything the customers want except the actual deal. Pennsylvania law forbids the sale of automobiles on Sunday.

In addition to the hospitality center, the mall will have a body shop and a service department with 75 stalls. Each franchise will have its own service staff.

The 30-acre park is situated on a 60-acre parcel of land a quarter-mile south of a shopping mall. As an added customer convenience, Ertley will run shuttles to and from the mall for customers who wish to shop while their vehicles are being serviced.

Unlike auto malls and parks that are occupied by several independent dealerships, The Ertley Dealerships will be the only company within the mall. The remaining land will be used as the business expands, Ertley said.

"We are very space conscious," he said. "We want to keep the land for our own use and our own growth."

The Ertley Dealerships employs 350 people and had sales of $132 million last year.

Light-truck CAFE is 20.2 for 1991-92

WASHINGTON — The National Highway Traffic Safety Administration said Friday that light-truck corporate average fuel economy standards would stay at 20.2 mpg for the 1992 model year.

The standard for the current model year is 20 mpg and is scheduled to rise to 20.2 mpg in the 1991 model year.

NHTSA also said it is discontinuing optional standards that allow manufacturers to have separate standards for 2-wheel-drive and 4-wheel-drive fleets.

Senate air bill heads for a vote

Amendment calls for reformulated gasoline in 9 dirtiest cities

By Diana T. Kuryiko
AUTOMOTIVE NEWS STAFF REPORTER

WASHINGTON — Alternative fuels provisions in clean air bills being hammered out in the Senate and a House committee were beefed up last week.

The Senate appeared ready to vote on a final package tomorrow that is basically stripped of provisions that were most worrisome to the automobile industry.

The Senate last week amended its bill by approving a provision that would require the sale of cleaner reformulated gasoline by 1993 in nine cities with the worst smog — Los Angeles, New York, Chicago, Houston, Milwaukee, Baltimore, Philadelphia, Muskegon, Mich., and San Diego.

A much more stringent alternative fuels provision for cars sold in those nine cities was adopted by the House Energy and Commerce Committee, which is deliberating over the House clean air bill.

The committee, headed by Rep. John Dingell, D-Mich, voted 23-19 after a long debate on the alternative fuels requirements, despite heavy lobbying by the auto industry.

The House committee voted to mandate the sale of cars that produce 10 percent fewer total vehicle emissions, starting in 1995 and lasting until 1999, and 24 percent fewer emissions for the year 2000 and following years.

Sam Leonard, director for automotive emission control at General Motors Corp., said automakers are likely to be able to meet the first phase requirement with reformulated gasoline.

Reformulated gasoline may also satisfy the second phase, but some vehicle modifications will have to be made, Leonard said.

Centrally fueled fleets would have to run 30 percent more cleanly beginning in 1995. Leonard said only a variable fuel methanol vehicle is likely to meet that emissions standard.

The second phase, for fleet vehicles bought after 2000, would mandate a 75 percent emissions reduction from 1995 levels.

Only a natural gas-fueled vehicle could run that cleanly, Leonard said.

Automakers fear cargo capacity would be cut by at least half if natural gas is mandated. Approximately twice as much natural gas is needed to go the same distance as gasoline, requiring a larger fuel tank.

Saab's priorities: efficiency, salaries

By John Wiman
SPECIAL CORRESPONDENT

TROLLHATTAN, Sweden — Saab Automobile President David J. Herman has two major challenges for 1990.

"To increase the efficiency of the production in our plant in Trollhattan by 25 percent and to start work on a new salary system where knowledge pays off," he said.

Herman

The absentee figures in Trollhattan are extremely high — up to 25 percent among assembly line workers. Saab cut its personnel by 2,000 last year and is going to cut about 1,000 more during 1990 and 1991. Two years ago, the plant had just over 9,000 employees.

"At the present moment we have the problem that too many workers are leaving," said Herman.

"The figure is 35 to 40 each week. We must put a stop to this."

At the same time, Herman stated that the assembly line will not be thrown out, as it was at Saab's new plant in Malmo.

"If Toyota can reach top quality on their Lexus, produced on an assembly line, we should be able to do that as well," said Herman.

Whether or not to introduce all-wheel drive on forthcoming models is another decision that Saab has to face.

"It might be introduced as an option," said Herman. "But before we make that decision, we have to decide if that car will be front- or rear-wheel-driven."

Herman added that 4-wheel drive also may be offered as an option on current 900 and 9000 models.

But he added, "Before we make the decision, we must be completely clear on why we should offer it. We won't introduce it just to have it."

Herman said a will be made within five or six months.

Herman said Saab's new plant in Malmo is on schedule with output of 35 cars a week and that output will steadily increase. "In the second half of 1991 the production is to be around 37,000 units a year," he added.

Herman dismissed speculation that GM will take 100 percent of Saab Automobile in the future: "Our owners have clearly stated that this company will live its own life, with its own board of directors. Both GM and Saab-Scania are ready to help us but only when we ask for their help."

IACOCCA

FROM PAGE 6

"The people who bought from us in the '70s, maybe we didn't do them too well. In the '80s we were doing better. But in the '90s, we're really there. But the buyer says, 'No, no, I've been burned twice by you, buster, and I'm not so sure.' "

He chided the press for giving the Japanese too much credit and not enough to domestic makers.

"When a 6-year-old product (the Chrysler minivan) takes 64 percent of the market in a raging battle, that's what I call news. In January 1990, we sold 63,733 minivans. That's more than the Japanese sell in a whole year, and nobody ran anything about that. Maybe I don't know what's news, but that seems like news to me."

However, Iacocca said he disagreed — sort of — with Chrysler Motors Chairman Ben Bidwell, who suggested at the *Automotive News* World Congress in January that the U.S. press is full of unpatriotic, "congenital sickos."

"No, that's Bidwell," Iacocca said, smiling. "I think you're sickos sometimes, too, just not congenital ones."

Discussing new products, he gently poked fun at the Voyager III concept car, which splits into two units. The front module is powered by propane, while the rear passenger unit is powered by a four-cylinder gasoline engine.

"Obviously, there are more than a few bugs to be worked out. Just because you have a driver's license doesn't mean you can dock the thing. Just try it.

"The government won't be able to figure out the gas mileage. And the marketing guys won't be able to figure out which end to put the rebate on."

He said there will be a Dodge Shadow convertible by this fall. Chrysler is working on getting the price cut nearly in half, from around $18,000 to $20,000, where it might fall today, to a target around $11,000 to $11,500.

Iacocca said Chrysler has cut back on its fleet sales.

"We've had to give up 50,000 to 70,000 units of fleet business because we can't match the prices that other people are offering. If every time you do it, you lose $300 or $400, that's just not good business. We even own a rental company, Thrifty, and Chrysler can't sell 'em any cars. We can't meet the price from the competition, so we tell 'em go ahead and buy 'em (from someone else).

Daimler-Benz, Tata discussing manufacturing pact

NEW DELHI, India — Tata Engineering and Locomotive Co. Ltd. is negotiating with German automaker Daimler-Benz AG to manufacture Mercedes-Benz commercial vehicles.

The vehicles would be made primarily for export and marketed under the Mercedes brand.

If the negotiations are successful, the resulting agreement would also lead to an update of the vehicles Tata currently builds in India.

Said Ratan Tata, chairman of Tata, "Their engineers and our engineers have had a couple of rounds of talks."

"The Benz people have also visited our facilities," Tata said.

Tata has manufacturing facilities in Pune, Maharashtra; and Jamshedpur, Bihar. A third facility is being built in Uttar Pradesh.

It is still not known whether Daimler will raise its present equity stake of 11 percent in Tata.

Total capital outlay in the project could range between 1.5 billion and 2.0 billion rupees ($88.2 million to $117.6 million).

Auto build holds steady at 138,531

By Karen Detkowski
AUTOMOTIVE NEWS STATISTICIAN

U.S. automakers scheduled 138,531 cars last week, 0.27 percent below the prior week but 6.22 percent above the year-ago week.

So far this year, 1,445,173 cars have been assembled, 24.17 percent below 1989.

Companies split last week's scheduled production as follows: General Motors, 43.28 percent; Ford Motor Co., 26.15 percent; Chrysler Corp., 10.76 percent; Honda of America Manufacturing Inc., 6.38 percent; Toyota Motor Manufacturing U.S.A. Inc., 3.15 percent; Mazda Motor Manufacturing (USA) Corp., 3.14 percent; New United Motor Manufacturing Inc., 2.96 percent; Diamond-Star Motors Corp., 2.13 percent; Nissan Motor Manufacturing Corp. U.S.A., 1.72 percent; and Subaru-Isuzu Automotive Inc., 0.33 percent.

Targeted output of 90,625 trucks last week was 1.16 percent below the prior week, but rose 17.73 percent above the year-ago week.

Truck production for the year stands at 954,199 units, 17.54 percent below a year ago.

The year-ago week's production was affected by a 4-day week in observance of Martin Luther King Jr. Day.

GM scheduled Saturday overtime last week at the following truck plants: Baltimore; Flint, Mich.; Fort Wayne, Ind.; Shreveport, La.; and Moraine, Ohio.

Also working overtime last Saturday were GM's A-line at the Lansing, Mich., plant and the Willow Run, Mich., facility.

GM's Janesville, Wis., Cavalier plant was scheduled for Friday overtime.

Ford scheduled daily overtime last week at the Wixom, Mich.; Atlanta; and Chicago car plants. Truck facilities working daily overtime were: St. Paul, Minn.; St. Louis; and Louisville, Ky.

Ford will close the Mustang assembly plant in Dearborn, Mich., and the Thunderbird/Cougar facility in Lorain, Ohio, this week due to a lack of dealer orders. The plants are scheduled to resume output April 9.

Chrysler will close its Belvidere, Ill.; Newark, Del.; Toledo, Ohio; and Sterling Heights, Mich., plants this week because of slow sales. Production will resume April 9.

Canadian cars near 1989 total

Canadian makers scheduled output of 21,201 cars last week, 2.23 percent below the prior week but 2.77 percent above the year-ago figure.

So far this year, 252,450 cars have been assembled, down 0.77 percent from 1989.

Truckmakers' scheduled output of 19,719 units fell 2.80 percent below the previous week and dipped 1.00 percent from the year-ago week.

Canadian truck assembly year-to-date is 227,222, which is 13.19 percent below last year's total at this point.
